

40V Precision Low Power Operational Amplifiers

ISL28117, ISL28217, ISL28417

The ISL28117, ISL28217 and ISL28417 are a family of very high precision amplifiers featuring low noise vs power consumption, low offset voltage, low I_{BIAS} current and low temperature drift making them the ideal choice for applications requiring both high DC accuracy and AC performance. The combination of precision, low noise, and small footprint provides the user with outstanding value and flexibility relative to similar competitive parts.

Applications for these amplifiers include precision active filters, medical and analytical instrumentation, precision power supply controls, and industrial controls.

The ISL28117 single and ISL28217 dual are offered in an 8 Ld SOIC, MSOP and TDFN packages. The ISL28417 is offered in 14 Ld SOIC, 14 Ld TSSOP packages. All devices are offered in standard pin configurations and operate over the extended temperature range from -40°C to $+125^{\circ}\text{C}$.

Related Literature

- See [AN1508](#) "ISL281X7SOICEVAL1Z Evaluation Board User's Guide"
- See [AN1509](#) "ISL282X7SOICEVAL2Z Evaluation Board User's Guide"

Features

- Low input offset $\pm 50\mu\text{V}$, Max.
- Superb offset TC. $0.6\mu\text{V}/^{\circ}\text{C}$, Max.
- Input bias current. $\pm 1\text{nA}$, Max.
- Input bias current TC $\pm 5\text{pA}/^{\circ}\text{C}$, Max.
- Low current consumption $440\mu\text{A}$
- Voltage noise $8\text{nV}/\text{Hz}$
- Wide supply range 4.5V to 40V
- Operating temperature range. -40°C to $+125^{\circ}\text{C}$
- Small package offerings in single, dual and quad
- Pb-Free (RoHS compliant)
- No phase reversal

Applications

- Precision instruments
- Medical instrumentation
- Spectral analysis equipment
- Active filter blocks
- Thermocouples and RTD reference buffers
- Data acquisition
- Power supply control

NOTES:

1. Add "-T*" suffix for tape and reel. Please refer to [TB347](#) for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see device information page for [ISL28117](#), [ISL28217](#), [ISL28417](#). For more information on MSL please see techbrief [TB363](#).

Recommended Operating Conditions

Ambient Temperature Range (T_A) -40°C to +125°C

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

- θ_{JA} is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief [TB379](#) for details.
- θ_{JA} is measured in free air with the component mounted on a high effective thermal conductivity test board with “direct attach” features. See Tech Brief [TB379](#).
- For θ_{JC} , the “case temp” location is the center of the exposed metal pad on the package underside.
- For θ_{JC} , the “case temp” location is taken at the package top center.

FIGURE 53. COMMON MODE INPUT IMPEDANCE

Applications Information

Functional Description

The ISL28117, ISL28217 and ISL28417 are single, dual and quad, low noise precision op amps. Both devices are fabricated in a new precision 40V complementary bipolar DI process. A super-beta NPN input stage with input bias current cancellation provides low input bias current (180pA typical), low input offset voltage (13μV typical), low input noise voltage (8nV/√Hz), and low 1/f noise corner frequency (~8Hz). These amplifiers also feature high open loop gain (18kV/mV) for excellent CMRR (145dB) and THD+N performance (0.0005% @ 3.5V_{RMS}, 1kHz into 2kΩ). A complimentary bipolar output stage enables high capacitive load drive without external compensation.

Operating Voltage Range

The devices are designed to operate over the 4.5V (±2.25V) to 40V (±20V) range and are fully characterized at 10V (±5V) and 30V (±15V). The Power Supply Rejection Ratio typically exceeds 140dB over the full operating voltage range and 120dB minimum over the -40°C to +125°C temperature range. The worst case common mode input voltage range over temperature is 2V to each rail. With ±15V supplies, CMRR performance is typically >130dB over-temperature. The minimum CMRR performance over the -40°C to +125°C temperature range is >120dB for power supply voltages from ±5V (10V) to ±15V (30V).

Input Performance

The super-beta NPN input pair provides excellent frequency response while maintaining high input precision. High NPN beta (>1000) reduces input bias current while maintaining good frequency response, low input bias current and low noise. Input bias cancellation circuits provide additional bias current reduction to <1nA, and excellent temperature stabilization. Figures 11 through 18 show the high degree of bias current stability at ±5V and ±15V supplies that is maintained across the -40°C to +125°C temperature range. The low bias current TC

also produces very low input offset current TC, which reduces DC input offset errors in precision, high impedance amplifiers.

The +25°C maximum input offset voltage (V_{OS}) for the “B” grade is 50μV and 100μV for the “C” grade. Input offset voltage temperature coefficients ($V_{OS}TC$) are a maximum of ±0.6μV/°C for the “B” and ±0.9μV/°C for the “C” grade. Figures 3 through 6 show the typical gaussian-like distribution over the ±5V to ±15V supply range and over the full temperature range. The V_{OS} temperature behavior is smooth (Figures 7 through 10) maintaining constant TC across the entire temperature range.

Input ESD Diode Protection

The input terminals (IN+ and IN-) have internal ESD protection diodes to the positive and negative supply rails, series connected 500Ω current limiting resistors and an anti-parallel diode pair across the inputs (Figure 54).

FIGURE 54. INPUT ESD DIODE CURRENT LIMITING- UNITY GAIN

The series resistors limit the high feed-through currents that can occur in pulse applications when the input dV/dt exceeds the 0.5V/μs slew rate of the amplifier. Without the series resistors, the input can forward-bias the anti-parallel diodes causing current to flow to the output resulting in severe distortion and possible diode failure. Figure 48 provides an example of distortion free large signal response using a 4V_{p-p} input pulse with an input rise time of <1ns. The series resistors enable the input differential voltage to be equal to the maximum power supply voltage (40V) without damage.

ISL28117, ISL28217, ISL28417

In applications where one or both amplifier input terminals are at risk of exposure to high voltages beyond the power supply rails, current limiting resistors may be needed at the input terminal to limit the current through the power supply ESD diodes to 20mA max.

Output Current Limiting

The output current is internally limited to approximately $\pm 45\text{mA}$ at $+25^\circ\text{C}$ and can withstand a short circuit to either rail as long as the power dissipation limits are not exceeded. This applies to only 1 amplifier at a time for the dual op amp. Continuous operation under these conditions may degrade long term reliability. Figures 27 and 28 show the current limit variation with temperature.

Output Phase Reversal

Output phase reversal is a change of polarity in the amplifier transfer function when the input voltage exceeds the supply voltage. The ISL28117, ISL28217 and ISL28417 are immune to output phase reversal, even when the input voltage is 1V beyond the supplies.

Unused Channels

The ISL28217 is a dual op-amp. If the application only requires one channel, the user must configure the unused channel to prevent it from oscillating. The unused channel oscillates if the input and output pins are floating. This results in higher than expected supply currents and possible noise injection into the channel being used. The proper way to prevent this oscillation is to short the output to the inverting input and ground the positive input, as shown in Figure 55.

FIGURE 55. PREVENTING OSCILLATIONS IN UNUSED CHANNELS

Power Dissipation

It is possible to exceed the $+150^\circ\text{C}$ maximum junction temperatures under certain load and power supply conditions. It is therefore important to calculate the maximum junction temperature (T_{JMAX}) for all applications to determine if power

supply voltages, load conditions, or package type need to be modified to remain in the safe operating area. These parameters are related using Equation 1:

$$T_{JMAX} = T_{MAX} + \theta_{JA} \times PD_{MAXTOTAL} \quad (\text{EQ. 1})$$

where:

- $PD_{MAXTOTAL}$ is the sum of the maximum power dissipation of each amplifier in the package (PD_{MAX})
- PD_{MAX} for each amplifier can be calculated using Equation 2:

$$PD_{MAX} = V_S \times I_{qMAX} + (V_S - V_{OUTMAX}) \times \frac{V_{OUTMAX}}{R_L} \quad (\text{EQ. 2})$$

where:

- T_{MAX} = Maximum ambient temperature
- θ_{JA} = Thermal resistance of the package
- PD_{MAX} = Maximum power dissipation of 1 amplifier
- V_S = Total supply voltage
- I_{qMAX} = Maximum quiescent supply current of 1 amplifier
- V_{OUTMAX} = Maximum output voltage swing of the application

ISL28117, ISL28217 and ISL28417 SPICE Model

Figure 56 shows the SPICE model schematic and Figure 57 shows the net list for the ISL28117, ISL28217 and ISL28417 SPICE model for a Grade "B" part. The model is a simplified version of the actual device and simulates important AC and DC parameters. AC parameters incorporated into the model are: $1/f$ and flatband noise, Slew Rate, CMRR, Gain and Phase. The DC parameters are VOS, IOS, total supply current and output voltage swing. The model uses typical parameters given in the "Electrical Specifications" Table beginning on page 6. The AVOL is adjusted for 155dB with the dominate pole at 0.02Hz. The CMRR is set (210dB, $f_{cm} = 10\text{Hz}$). The input stage models the actual device to present an accurate AC representation. The model is configured for ambient temperature of $+25^\circ\text{C}$.

Figures 58 through 68 show the characterization vs simulation results for the Noise Voltage, Closed Loop Gain vs Frequency, Closed Loop Gain vs R_L , Large Signal Step Response, Open Loop Gain Phase and Simulated CMRR vs Frequency.

DATE	REVISION	CHANGE
August 31, 2010	FN6632.5	<p>1. General changes:</p> <ul style="list-style-type: none"> a. Added in Quad devices to the datasheet for SOIC, TSSOP and QFN packages. b. Added in TDFN packages for single and dual devices. c. Added in new VOS and TC沃斯 limits for TDFN packages d. Added Tja and Tjc Notes for TDFN Package which are "direct attach (Tja) " and "bottom (Tjc)" <p>2. Specific changes:</p> <ul style="list-style-type: none"> a. Added in ISL28417 to title and front page info on page 1 b. Added in ISL28117FRTZ, ISL28117FRTBZ, ISL28217FRTZ, ISL28217FRTBZ, ISL28417FBZ, ISL28417FVZ, and ISL28417FRZ packages to Ordering information on page 2 and page 2. Added in -T7 and -T7A tape and reel extensions where applicable. c. Added in TDFN, 14 Ld SOIC, 14 Ld TSSOP and 16 Ld QFN to pin configurations on page 3 and page 3. d. Updated Pin Descriptions tables with new added in packages on page 4. e. Abs Max Table added in thermal packaging info for TDFN packages on page 6. f. Electrical Specifications Table - Added two new line items for VOS spec. TDFN package ISL28217 Grade B limits $\pm 70\mu\text{V}$ 25C and $\pm 140\mu\text{V}$ full temp. TDFN package ISL28x17 Grade C limits $\pm 150\mu\text{V}$ 25C and $\pm 250\mu\text{V}$ full temp on page 6 and page 8. g. Electrical Specifications Table - Added two new line items for TC沃斯 spec. TDFN package ISL28217 Grade B limits $\pm 0.7\mu\text{V}/\text{C}$ full temp. TDFN package ISL28x17 Grade C limits $\pm 1\mu\text{V}/\text{C}$ on page 7 and page 9. h. Added in PODs for L8.3x3A, M14.15, M14.173, and L16.4x4
March 18, 2010	FN6632.4	<ul style="list-style-type: none"> 1. Updated "Ordering Information" on page 2 by adding two rows for MSOP packages ISL28117FUBZ and ISL28117FUZ, which are scheduled to release Q2 2010. Added Pinout accordingly. 2. Added POD for MSOP M8.118 to the end of datasheet 3. In "Ordering Information" on page 2, Separated each part number with it's own specific -T7 and -T13 suffix and removed "Add "-T7" or "-T13" suffix for Tape and Reel." from Note 1. 4. Updated ± 15 and $\pm 5\text{V}$ Electrical Specification table with the following edits: <ul style="list-style-type: none"> A) Separated VOS specs for SOIC and MSOP Grade C packages. Added new VOS specs for MSOP Grade C package. B) Separated TC沃斯 specs for SOIC and MSOP Grade C packages. Added new TC沃斯 specs for MSOP Grade C package. 5. Added "Thermal Information" on page 6 for ISL28117 MSOP package.
March 3, 2010		<ul style="list-style-type: none"> Added "Related Literature" on page 1. Added Evaluation Boards to "Ordering Information" on page 2. Added Theta JC values to "Thermal Information" on page 6. Added applicable Theta JC Note 7. Updated Theta JA for ISL28217 8 Ld SOIC from $115^\circ\text{C}/\text{W}$ to $105^\circ\text{C}/\text{W}$.
January 21, 2010		<p>Part marking in "Ordering Information" on page 2 changed as follows:</p> <ul style="list-style-type: none"> ISL28117FBBZ changed from "28117 FBZ -B" to "28117 FBZ" ISL28117FBZ changed from "28117 FBZ" to "28117 FBZ -C" ISL28217FBBZ changed from "28217 FBZ -B" to "28217 FBZ" ISL28217FBZ changed from "28217 FBZ" to "28217 FBZ -C"
December 24, 2009		<ul style="list-style-type: none"> On page 10: Changed label in Figure 3 from "$V_S = +5\text{V}$" to "$V_S = \pm 5\text{V}$" On page 10: Changed label in Figure 4 from "$V_S = +15\text{V}$" to "$V_S = \pm 15\text{V}$"
November 25, 2009		<p>Changed Typical VOS spec from "13" to "8" (B Grade), "19" to "4" (C Grade), IB from "0.18" to "0.08, IOS from "0.3" to "0.08". Edited Spice Schematic - L1 from "95.4957" to "15.9159E", R1 from "6k" to 1, R9 from "1" to "2.1E3", R10 from "1" to "2.1E3, R12 from "6k" to "1", L2 from "95.4957" to "15.9159E". Edited Spice Net List - Changed Revision from "A" to "B", Date change from "October 29th 2009" to "November 20th 2009", added after AOL "SR = 0.5V/μsec, Input Stage changed in I_IOS from "0.3E-9" to 0.08E-9, V_VOS "13e-6" to "8e-6", Mid supply Ref R_R9 and R_R10 changed "1" to "2.1E3", Common Mode Gain Stage with Zero change in G_G5 and G_G6 "5.27046e-15" to "3.162277", R_R11 and R_R12 "6.3" to "1", L_L1 and L_L2 "95.4957" to "15.9159E-3"</p>
November 12, 2009	FN6632.3	<p>Updated Typical Performance Curves Figure 5, 7, 9, 11, 13, 15, 17 and 19. Added Spice Model and license statement. Replaced typical application schematic.</p>

ISL28117, ISL28217, ISL28417

Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to web to make sure you have the latest Rev. (Continued)

DATE	REVISION	CHANGE
October 16, 2009	FN6632.2	On page 2 "Ordering Information", changed the following: a) corrected part marking for ISL28117FBBZ from "28117 -B FBZ" to "28117 FBZ -B". Corrected part marking for ISL28217FBBZ from "28217-B FBZ" to "28217 FBZ -B" B) Updated package outline drawing to most recent revision (no changes were made to package dimensions; land pattern was added and dimensions were moved from table onto drawing) c) Added "Add "-T7" or "-T13" suffix for tape and reel." to the tape and reel Note 1. d) added Note 3 callout to all parts (Note 3 reads: "For Moisture Sensitivity Level (MSL), please see device information page for ISL28117, ISL28217. For more information on MSL please see techbrief TB363.") e) removed "Coming Soon" from ISL28117FBBZ, ISL28117FBZ & ISL28217FBBZ devices
October 8, 2009	FN6632.1	1. Removed "very" from "...low noise.." 1st sentence, page 1. 2. Removed "Low" from 6th bullet under features, page 1. 3. Modified typical characteristics curves to show conservative performance. Specific channel designations removed. On temperature curves, changed formatting to indicate range from typical value. Changes include: a. Removed former Figures 1, 3, 5, 7, 9, 10, 13, 14, 17, 18, 21, 22, 25, 26, 29, 30, 33, 34, 37 & 38 (all Channel A curves) b. Replaced former Figures 19, 20, 23, 24, 27, 28, 31, 32, 35, 36, 39 & 40 with new Figures 9 thru 20 (all "conservative channels") c. Added Figures 30, 31, 32 4. Updated TCvos histogram on page 1 to match TCvos histogram Figure 6 on page 7 (same graphic) 5. Added temp labels to Figures 28 & 29
September 3, 2009	FN6632.0	Initial Release

About Intersil

Intersil Corporation is a leader in the design and manufacture of high-performance analog, mixed-signal and power management semiconductors. The company's products address some of the fastest growing markets within the industrial and infrastructure, personal computing and high-end consumer markets. For more information about Intersil or to find out how to become a member of our winning team, visit our website and career page at www.intersil.com.

For a complete listing of Applications, Related Documentation and Related Parts, please see the respective product information page. Also, please check the product information page to ensure that you have the most updated datasheet: [ISL28117](#), [ISL28217](#), [ISL28417](#)

To report errors or suggestions for this datasheet, please go to: www.intersil.com/askourstaff

Reliability reports are available from our website at: <http://rel.intersil.com/reports/search.php>

Package Outline Drawing (M8.15E)

M8.15E

8 LEAD NARROW BODY SMALL OUTLINE PLASTIC PACKAGE

Rev 0, 08/09

NOTES:

1. Dimensions are in millimeters.
Dimensions in () for Reference Only.
2. Dimensioning and tolerancing conform to AMSE Y14.5m-1994.
3. Unless otherwise specified, tolerance : Decimal ± 0.05
4. Dimension does not include interlead flash or protrusions.
Interlead flash or protrusions shall not exceed 0.25mm per side.
5. The pin #1 identifier may be either a mold or mark feature.
6. Reference to JEDEC MS-012.

ISL28117, ISL28217, ISL28417

Package Outline Drawing (M8.118B)

M8.118B

8 LEAD MINI SMALL OUTLINE PLASTIC PACKAGE

Rev 1, 3/12

NOTES:

1. Dimensions are in millimeters.
2. Dimensioning and tolerancing conform to JEDEC MO-187-AA and AMSEY14.5m-1994.
3. Plastic or metal protrusions of 0.15mm max per side are not included.
4. Plastic interlead protrusions of 0.15mm max per side are not included.
5. Dimensions are measured at Datum Plane "H".
6. Dimensions in () are for reference only.

Package Outline Drawing (L8.3x3K)

L8.3x3K

8 LEAD THIN DUAL FLAT NO-LEAD PLASTIC PACKAGE

Rev 1, 9/11

TYPICAL RECOMMENDED LAND PATTERN

NOTES:

1. Dimensions are in millimeters.
Dimensions in () for Reference Only.
2. Dimensioning and tolerancing conform to AMSE Y14.5m-1994.
3. Unless otherwise specified, tolerance : Decimal ± 0.05
4. Dimension applies to the metallized terminal and is measured between 0.15mm and 0.20mm from the terminal tip.
5. Tiebar shown (if present) is a non-functional feature.
6. The configuration of the pin #1 identifier is optional, but must be located within the zone indicated. The pin #1 identifier may be either a mold or mark feature.
7. Compliant to JEDEC MO-229 WEEC-2 except for the foot length.

ISL28117, ISL28217, ISL28417

Package Outline Drawing (M14.173)

M14.173

14 LEAD THIN SHRINK SMALL OUTLINE PACKAGE (TSSOP)

Rev 3, 10/09

NOTES:

1. Dimension does not include mold flash, protrusions or gate burrs. Mold flash, protrusions or gate burrs shall not exceed 0.15 per side.
2. Dimension does not include interlead flash or protrusion. Interlead flash or protrusion shall not exceed 0.25 per side.
3. Dimensions are measured at datum plane H.
4. Dimensioning and tolerancing per ASME Y14.5M-1994.
5. Dimension does not include dambar protrusion. Allowable protrusion shall be 0.80mm total in excess of dimension at maximum material condition. Minimum space between protrusion and adjacent lead is 0.07mm.
6. Dimension in () are for reference only.
7. Conforms to JEDEC MO-153, variation AB-1.
