**Description**

The SKY13293-340LF is a four-input to two-output switch in a low-cost Quad Flat No-Lead (QFN) 4 x 4 mm package. The switch can control signals from 0.25 to 2.15 GHz. The SKY13293-340LF enables 16 states, directing any of the four inputs to either of the two outputs. Switch states are selected by four voltage inputs.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

**Note:** Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**CAUTION:** Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

**Electrical and Mechanical Specifications**

The absolute maximum ratings of the SKY13293-340LF are provided in Table 2. The electrical specifications are provided in Table 3.

Typical performance characteristics of the SKY13293-340LF are illustrated in Figures 3 through 11.

The state of the SKY13293-340LF is determined by the logic provided in Table 4.

An application circuit diagram is presented in Figure 12.
