SKY13364-389LF: 0.4-2.2 GHz GaAs SP10T Switch

Applications

- 2G/3G multimode cellular handsets (UMTS, CDMA2000, EDGE, GSM)
- Embedded data cards

Features

- Broadband frequency range: 0.4 to 2.2 GHz
- Four CMOS/TTL control voltages (0/1.35 to 3.1 V)
- Single, positive DC power supply (2.5 to 3.3 V)
- Integrated, low-pass harmonic filter for GSM transmit paths
- Integrated CMOS decoder
- Small QFN (26-pin, 3.0 x 3.8 mm) package (MSL1, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Description

The SKY13364-389LF is a GaAs pHEMT Single Pole, Ten-Throw (SP10T) antenna switch with an integrated CMOS decoder and dual low-pass harmonic filters. The switch has four WCDMA transmit/receive ports, four GSM receive ports, and two GSM transmit ports that make the device ideal for cellular handset and data card applications.

Using advance switching technologies, the SKY13364-389LF maintains low insertion loss and high isolation for both transmit and receive switching paths. The switch exhibits an excellent 2nd/3rd order modulation distortion performance.

Switching is controlled by four CMOS/TTL-compatible control voltage inputs (V1, V2, V3, and V4). Depending on the logic voltage level applied to the control pins, the antenna pin is connected to one of ten switched RF ports using a low insertion loss path, while the paths between the antenna pin and the other RF pins are in a high isolation state. No external DC blocking capacitors are required on the RF paths

The SKY13364-389LF is manufactured in a compact, 3.0 x 3.8 mm, 26-pin Quad Flat No-Lead (QFN) package.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Table 2. SKY13364-389LF Absolute Maximum Ratings

Parameter	Symbol	Minimum	Typical	Maximum	Units
RF input power	P _{IN}			+36	dBm
Power supply				5	V
Control voltage	V _{CTL}			3.3	V
Storage temperature	T _{STG}	-40		+125	°C
Operating temperature	T _{OP}	-30		+90	°C

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Functional Description

The time from when V_{DD} is applied to when the switch is active is the startup time. Once the startup time has passed, the control voltages can be applied. RF power should not be applied during the startup time or damage to the device could result.

The recommended startup sequence is:

- Step 1: Apply V_{DD}.
- Step 2: Apply V1 to V4 voltages.
- Step 3: Apply the RF input.

Recommended startup time is 25 μs.

The device must be turned off in the reverse order.

Typical performance characteristics are illustrated in Figures 3 to 14.

The state of the SKY13364-389LF is determined by the logic provided in Table 4.

Figure 15 illustrates the test setup used to measure data for Figure 12. This industry standardized test is used to simulate the WCDMA Band 1 linearity of the antenna switch. A +20 dBm Continuous Wave (CW) signal, P_{FUND}, is sequentially applied to the TRX1 through TRX4 ports, while a -15 dBm CW blocker signal, P_{BLK}, is applied to the ANT port.

The resulting 3rd Order Intermodulation Distortion (IMD3), f_{rx}, is measured over all phases of P_{FUND}. The SKY13364-389LF exhibits exceptional performance for all TRX ports.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY13364-389LF are provided in Table 2. Electrical specifications are provided in Table 3.

Evaluation Board Description

The SKY13364-389LF Evaluation Board is used to test the performance of the SKY13364-389LF SP10T Switch. An Evaluation Board schematic diagram is provided in Figure 16. An assembly drawing for the Evaluation Board is shown in Figure 17.

Package Dimensions

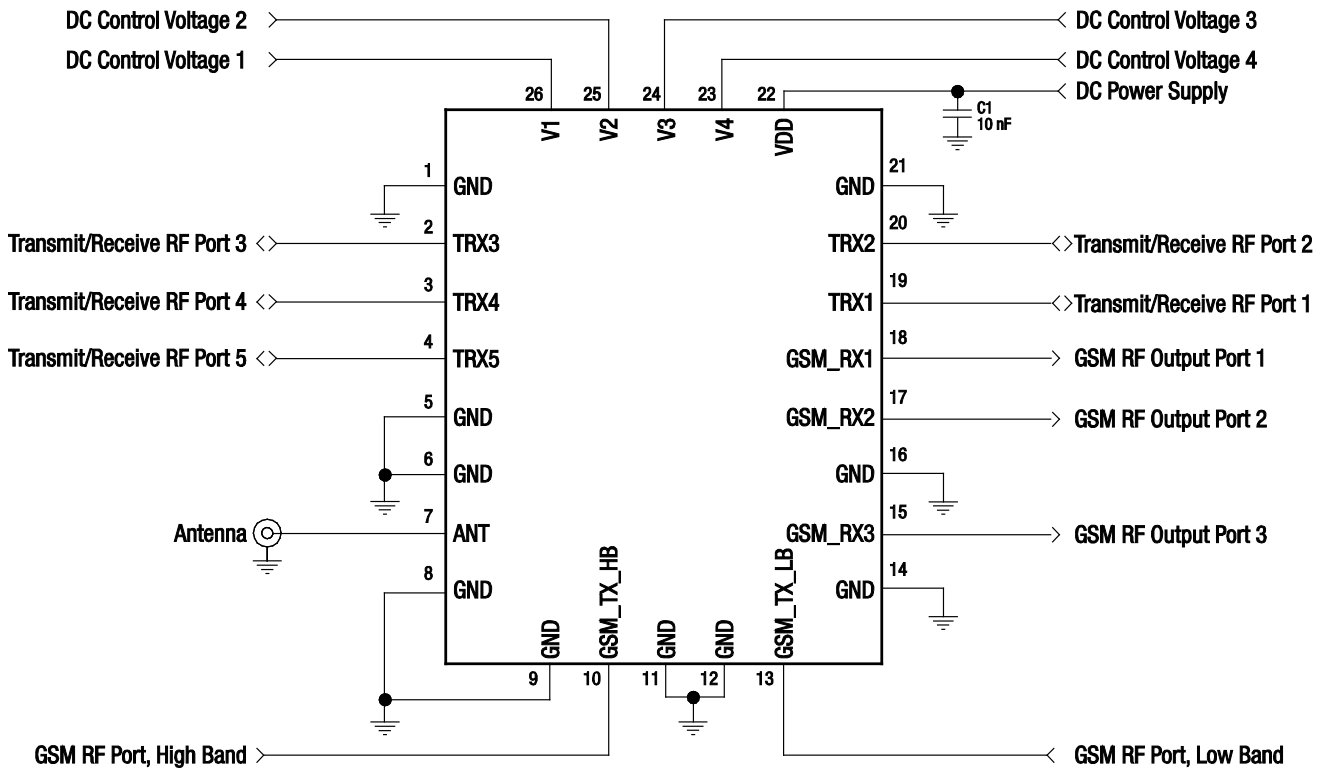

The PCB layout footprint for the SKY13364-389LF is provided in Figure 18. Typical case markings are shown in Figure 19. Package dimensions for the 26-pin QFN are shown in Figure 20, and tape and reel dimensions are provided in Figure 21.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY13364-389LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.
