

20V to 250V Driver for High Power PIN Diode Switches

Rev. V1

Features

- 20 V to 250 V Back Bias in Off State
- 200 mA Series Diode Bias Current at +25°C
- 50 mA Shunt Diode Bias Current at +25°C
- Propagation Delay less than 8 µs
- Low Quiescent Current Consumption
- 3 V or 5 V CMOS Logic Control
- 7 mm QFN-16LD Package
- Tape and Reel Packaging Available
- RoHS* Compliant and 260°C Reflow Compatible

Description

The MADR-010574 switch driver is designed to work with M/A-COM Technology Solutions high power and high voltage PIN diodes. This driver consists of two independently controlled drivers which are able to provide 200 mA series / 50 mA shunt current to a series/shunt, series/shunt SPDT PIN diode switch. The back bias voltage is configurable from 20 V to 250 V. High voltage level shifters are integrated so that it can be easily controlled by 3 V or 5 V CMOS logic. While consuming low quiescent current, this driver has a typical delay of less than 8 µs when driving 220 pF capacitor load. If needed, the switching speed can be improved by consuming more quiescent power.

This driver is packaged in a lead free 7 mm PQFN-16LD package and is available in tape and reel packaging for high volume applications.

Ordering Information

1

volume is not guaranteed.

| Part Number | Package |
|--------------------|---|
| MADR-010574-000100 | Bulk Packaging |
| MADR-010574-0001TR | 1000 piece Reel |
| MADR-010574-001SMB | Sample Board with Driver & MA4P504-1072T Diodes |

Functional Schematic

Pin Configuration¹

| Pin No. | Pin Name | Description |
|---------|-------------------|-----------------|
| 1 | SH1 | Shunt1 |
| 2 | C1 | Control Logic 1 |
| 3 | I _{BIAS} | Bias Voltage |
| 4 | SER1 | Series1 |
| 5 | N/C ² | No Connection |
| 6 | GND | Ground |
| 7 | GND | Ground |
| 8 | N/C ² | No Connection |
| 9 | SH2 | Shunt2 |
| 10 | V _{cc} | Control Voltage |
| 11 | C2 | Control Logic 2 |
| 12 | SER2 | Series2 |
| 13 | GND | Ground |
| 14 | N/C ² | No Connection |
| 15 | N/C ² | No Connection |
| 16 | V _{DD} | Drain Voltage |
| 17 | Paddle | Ground |

1. The paddle of the QFN package should be tied to ground.

 N/C pins (except Pin 15) can be grounded. The clearance from high voltage pins should be at least 0.8 mm. Pin 15 must be left open.

* Restrictions on Hazardous Substances, European Union Directive 2002/95/EC.

Recommended Operating Conditions

| Parameter | Test Conditions | Unit | Unit Min. | | Max. |
|--|--|------|------------------------------|------------------------|---------------------------------|
| V _{cc} | Nominal V_{CC} = 3.3 V Nominal V_{CC} = 5.0 V | V | 3.0 4.5 | 3.3 5.0 | 3.6 5.5 |
| V _{DD} | — | V | 20 | | 250 |
| Control1, Control2 ³ | Logic "0" Logic "1" | V | 0.0 0.7 × V _{CC} | 0.0 V _{CC} | $0.3 \times V_{CC}$ V_{CC} |
| Series1/Series2 Sinking Current ⁴ | -40°C +25°C +85°C | mA | _ | — | 300 200 150 |
| Shunt1/Shunt2 Sinking Current ⁴ | -40°C +25°C +85°C | mA | _ | _ | 65 55 50 |
| I _{BIAS} ^{5,6} | +25°C | μA | 2 | 6 | 150 |
| Operating Temperature | _ | °C | -40 | +25 | +85 |

3. Unused Controls should be either grounded or connected to V_{CC} . They should never be left open.

4. Refer to "Application Circuit: Driving SPDT Switch with MA4P504-1072T Pin Diodes" for configuration of diode bias currents.

 This sinking bias current is necessary for normal driver operation. The easiest way is to connect a 0402 resistor R_{BIAS} between Pin V_{CC} and Pin I_{BIAS}. Then I_{BIAS} can be calculated by: I_{BIAS} = (V_{CC}-0.6)/(500+R_{BIAS})

 Refer to graph "Typ. Ton Driving 220 pF Caps vs. IBIAS" on page 3 and the chart "Typ. IDD vs. IBIAS at 25°C" on page 4 for the tradeoff between switching speed and power consumption.

Absolute Maximum Ratings 7,8

| Parameter | Absolute Maximum | | | |
|--|----------------------------|--|--|--|
| V _{CC} | -0.5 V to +7 V | | | |
| V _{DD} | -0.5 V to 275 V | | | |
| C1, C2 (Logic) | -0.5 V to 7 V | | | |
| Series1/Series2 Sinking Current -40°C +25°C +85°C | 550 mA 450 mA 350 mA | | | |
| Shunt1/Shunt2 Sinking Current -40°C +25°C +85°C | 150 mA 150 mA 100 mA | | | |
| Series/Shunt Outputs Sourcing Current | 25 mA | | | |
| I _{BIAS} | 500 µA | | | |
| ESD HBM Rating | >1kV | | | |
| Operating Temperature | -40 to +125°C | | | |
| Storage Temperature | -55 to +150°C | | | |

7. M/A-COM Technology Solutions does not recommend sustained operation near these survivability limits.

8. Exceeding any one or combination of these limits may cause permanent damage to this device.

Truth Table ⁹

| C1 | C2 | Series1 | Shunt1 | Series2 | Shunt2 |
|----|----|---------|--------|---------|--------|
| 0 | 0 | Low | High | Low | High |
| 0 | 1 | Low | High | High | Low |
| 1 | 0 | High | Low | Low | High |
| 1 | 1 | High | Low | High | Low |

9. The actual voltage levels for "Low" and "High" are dependent on the current load to the driver. They can be estimated from the driver on resistance.

Powering On/Off Sequence:

 V_{DD} should be turned on after $V_{\text{CC}},$ and the rise time of V_{DD} should be slower than 2.5 $\mu s.$ When powering off, V_{DD} should be turned off before $V_{\text{CC}}.$

10. The parameters were measured with 500 k Ω R_{BIAS} connecting between pin V_{CC} and pin I_{BIAS}

11. I_{BIAS} is included in the quiescent V_{CC} current due to the bias configuration.

12. Switching parameters were measured driving 220 pF capacitors with no current load. Controls C1 and C2 were tied together. It will be faster when C2 is inverted from C1, which is case driving a SPDT switch.

Typ. Ton Driving 220pF Caps vs IBIAS VCC = 3.3V, VDD = 250V, 25°C

Application Circuit: Driving SPDT Switch with MA4P504-1072T PIN Diodes ¹⁴

14. This is the schematic of MADR-010547-001SMB. The frequency range for this application circuit is 200 MHz to 500 MHz. The bias current for the series diodes is 200 mA. The bias current for the shunt diodes is 50 mA. The recommended inductors are Coil Craft 0603LS-181XJLB for both current and frequency considerations. For different frequency applications, both capacitors and inductors should be adjusted accordingly.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Silicon Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
