**Description**

The SFP650-12BG is a 650-watt, power factor corrected (PFC) front-end which provides a 12 VDC output for datacom and other distributed power applications. Its compact size enables mounting in both 1U and 2U height racks. High efficiencies, advanced thermal management techniques, and an internal fan increase reliability over a broad range of operating conditions. Internal ORing diodes facilitate use in hot-swap (plug)<sup>1</sup>, redundant configurations.

Status is provided with front panel LEDs, logic signals, and via the I<sup>2</sup>C management interface bus.

The SFP650-12BG meets international safety requirements and is CE marked to the Low Voltage Directive (LVD).

**Model Selection**

Model	Nominal Output Voltage (VDC)	Adjustment Range (VDC)	Maximum Output Current (Amps)	Regulation %	Ripple & Noise @ 20 MHz BW (mV)
SFP650-12BG	12 3.3 (Standby)	N/A N/A	53.3 3	±3 ±3	100 100

<sup>1</sup> Proper hot-swap (plug) operation instruction: Power supply is not intended to be inserted into the system with AC cord already applied. Alternatively, if there is an application where power supply insertion with AC cord is required; PS\_ON must be toggled or AC recycled after insertion into the system to reset the power supply.
