INTRODUCTION

Aeroflex RAD's new radiation tolerant power MOSFETs are now available in die, seven standard package options and custom packaging for HiRel environments. Applications within military, aerospace, medical, nuclear power generation, high energy physics research laboratories can benefit from the use of this new series of MOSFETs. Aeroflex's Power MOSFETs are radiation tolerant to 100 krad(Si) and SEGR/SEB immune to their full rated breakdown potential.

Operational power losses are minimized by Aeroflex's ideal combination of low $R_{DS(on)}$ and gate charge. Die size is optimized for maximum current rating while meeting industry norms. These units are suitable for standalone and hybrid applications.

The RAD7214-NCx Die are well suited for low loss switching applications, such as DC-to-DC Converters and solid-state relays. They are drop-in compatible with industry standards.
