General Description

The G1559 consists of four independent, high gain, internally frequency compensated operational amplifiers which were designed to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible. The input common mode range of the G1559 can be beyond the rails, and the G1559 are with rail-to-rails output voltage swing. The quiescent current is 2mA per amplifier.

The G1559 also feature fast slewing and settle-times, as well as high output drive capability of 300mA (source/sink). These features make these amplifiers ideal for use as reference buffers for TFT-LCD. Other applications include battery power, portable devices, and anywhere low power consumption is important.

The G1559 is housed in a TSSOP-14 and TSSOOP-14 (FD) packages.
