

DUAL OUTPUT ANGULAR POSITION SENSOR

AN9 Series

Non-contacting magnetic position sensor with two independent outputs
Ideal for high reliability sensing applications

Features and Benefits

- Angular position sensor with high tolerance for misalignment
- Dual (redundant) outputs assure very high reliability
- Non-contact sensing up to full 360° rotation
- No mechanical interface
 - Nothing to break or wear out
 - No possibility of jamming or resistance to motion
- Sealed design meets IEC529 IP68 for immersion
- Rugged design includes EMI/ESD protection to SAE J1113 standards
- Performs with standard AS500106 magnetic actuator
- Maximum operating temperature of 125°C

Description

The sensor is operated by rotating a magnetic actuator close to the face of the sensor. Output voltage varies with angular position of the magnet relative to the sensor. Optimal performance is achieved with Cherry's AS500106 magnetic actuator.

Applications

- Angular position in electro-hydraulic system (heavy equipment control)
- Steer wheel position (steer by wire)
- Shifter position (shift by wire)
- Brake pedal position (brake by wire)

Custom Options

(Contact factory for minimums and availability)

- Linear output over specific angular rotation ranges available on request
- Sensor can be programmed for use with custom magnets
- Custom programming option for rising or falling output slope with selectable offset, gain, clamp voltage
- PWM output option available for custom application
