

Description

- The SJ73Lxxx prevents the error of system from supply voltage below normal voltage level at the time of the power on and instantaneous power off in systems.

Features

- Current Consumption is Low ($I_{CCL}=300\ \mu A$ Typ. $I_{CCH}=30\ \mu A$ Typ.)
- Resetting Output Minimum Guarantee Voltage is Low (0.8V Typ.)
- Hysteresis Voltage is Provided (50 mV Typ.)
- Open Collector Output Configuration

Applications

- As Control Circuit of Battery-Backed Memory
- As Measure Against Erroneous Operations at Power On-Off
- As Resetting Function for the CPU-Mounted Equipment --- PC, Printer, DVD, STB, Fax, C-TV etc.
- As Measure Against System Runaway at Instantaneous Break of Power Supply etc.

Equivalent Circuit

Application Circuit

Test Circuit 1

Test Circuit 2

(1) Battery Low Indicator

Note 1. : Connecting of LED and R2 obtains a voltage drop indicator.

(2) Resetting for CPU

The AUK Corp. products are intended for the use as components in general electronic equipment (Office and communication equipment, measuring equipment, home appliance, etc.).

Please make sure that you consult with us before you use these AUK Corp. products in equipments which require high quality and / or reliability, and in equipments which could have major impact to the welfare of human life(atomic energy control, airplane, spaceship, transportation, combustion control, all types of safety device, etc.). AUK Corp. cannot accept liability to any damage which may occur in case these AUK Corp. products were used in the mentioned equipments without prior consultation with AUK Corp..

Specifications mentioned in this publication are subject to change without notice.
