1. The slope is defined as the difference between the gain at the start frequency and the gain at the stop frequency.  
 2. 132 channels, NTSC frequency raster: 55.25MHz to 865.25MHz, +40dBmV flat output level.  
 Composite Second Order (CSO) - The CSO parameter (both sum and difference products) is defined by the NCTA.  
 Composite Triple Beat (CTB) - The CTB parameter is defined by the NCTA.  
 Cross Modulation (XMOD) - Cross modulation (XMOD) is measured at baseband (selective voltmeter method), referenced to 100% modulation of the carrier being tested.
