## **Switch-mode NPN Bipolar Power Transistor**

### For Switching Power Supply Applications

The MJE/MJF18004 have an applications specific state-of-the-art die designed for use in 220 V line-operated switch-mode Power supplies and electronic light ballasts.

#### **Features**

- Improved Efficiency Due to Low Base Drive Requirements:
  - ♦ High and Flat DC Current Gain h<sub>FE</sub>
  - ◆ Fast Switching
  - No Coil Required in Base Circuit for Turn-Off (No Current Tail)
- Full Characterization at 125°C
- ON Semiconductor Six Sigma Philosophy Provides Tight and Reproducible Parametric Distributions
- Two Package Choices: Standard TO-220 or Isolated TO-220
- MJF18004, Case 221D, is UL Recognized at 3500 V<sub>RMS</sub>: File #E69369
- These Devices are Pb-Free and are RoHS Compliant\*

#### **MAXIMUM RATINGS**

Rating	Symbol	Value	Unit
Collector–Emitter Sustaining Voltage	V <sub>CEO</sub>	450	Vdc
Collector-Base Breakdown Voltage	V <sub>CES</sub>	1000	Vdc
Emitter-Base Voltage	V <sub>EBO</sub>	9.0	Vdc
Collector Current - Continuous	Ic	5.0	Adc
Collector Current - Peak (Note 1)	I <sub>CM</sub>	10	Adc
Base Current – Continuous	Ι <sub>Β</sub>	2.0	Adc
Base Current – Peak (Note 1)	I <sub>BM</sub>	4.0	Adc
RMS Isolation Voltage (Note 2)  Test No. 1 Per Figure 22a  Test No. 2 Per Figure 22b  Test No. 3 Per Figure 22c  (for 1 sec, R.H. < 30%, T <sub>A</sub> = 25°C)	V <sub>ISOL</sub>	<b>MJF18004</b> 4500 3500 1500	V
Total Device Dissipation @ T <sub>C</sub> = 25°C	P <sub>D</sub>	75 35 0.6 0.28	W W/°C
Operating and Storage Temperature	T <sub>J</sub> , T <sub>stg</sub>	-65 to 150	°C

#### THERMAL CHARACTERISTICS

Characteristics	Symbol	Max	Unit
Thermal Resistance, Junction-to-Case MJE18004 MJF18004	$R_{\theta JC}$	1.65 3.55	°C/W
Thermal Resistance, Junction-to-Ambient	$R_{\theta JA}$	62.5	°C/W
Maximum Lead Temperature for Soldering Purposes 1/8" from Case for 5 Seconds	TL	260	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

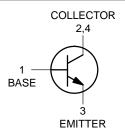

- 1. Pulse Test: Pulse Width = 5 ms, Duty Cycle ≤ 10%.
- 2. Proper strike and creepage distance must be provided.

#### **GUARANTEED SAFE OPERATING AREA INFORMATION**

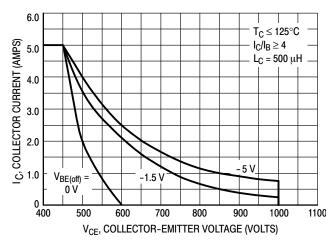

Figure 15. Forward Bias Safe Operating Area

Figure 16. Reverse Bias Safe Operating Area

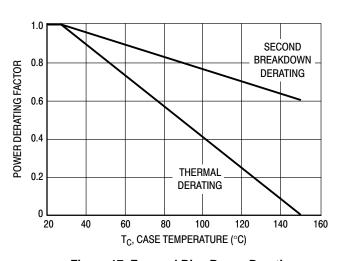

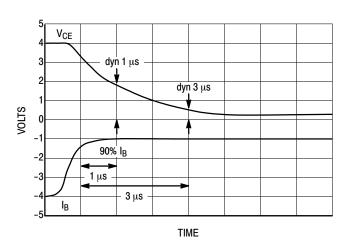

Figure 17. Forward Bias Power Derating

There are two limitations on the power handling ability of a transistor: average junction temperature and second breakdown. Safe operating area curves indicate I<sub>C</sub>-V<sub>CE</sub> limits of the transistor that must be observed for reliable operation; i.e., the transistor must not be subjected to greater dissipation than the curves indicate. The data of Figure 15 is based on  $T_C = 25^{\circ}C$ ;  $T_J(pk)$  is variable depending on power level. Second breakdown pulse limits are valid for duty cycles to 10% but must be derated when  $T_C \ge 25$ °C. Second breakdown limitations do not derate the same as thermal limitations. Allowable current at the voltages shown on Figure 15 may be found at any case temperature by using the appropriate curve on Figure 17. T<sub>J</sub>(pk) may be calculated from the data in Figures 20 and 21. At any case temperatures, thermal limitations will reduce the power that can be handled to values less the limitations imposed by second breakdown. For inductive loads, high voltage and current must be sustained simultaneously during turn-off with the base-to-emitter junction reverse biased. The safe level is specified as a reverse-biased safe operating area (Figure 16). This rating is verified under clamped conditions so that the device is never subjected to an avalanche mode.

#### **TEST CONDITIONS FOR ISOLATION TESTS\***

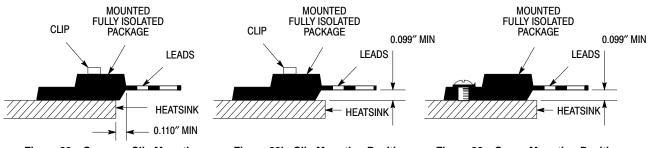

Figure 22a. Screw or Clip Mounting Position for Isolation Test Number 1

Figure 22b. Clip Mounting Position for Isolation Test Number 2

Figure 22c. Screw Mounting Position for Isolation Test Number 3

#### MOUNTING INFORMATION\*\*

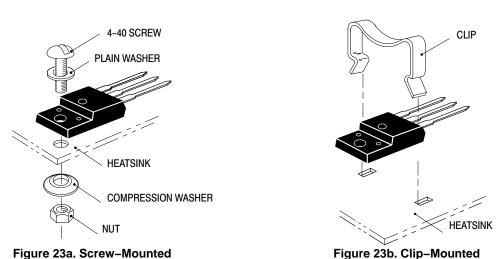

Figure 23. Typical Mounting Techniques

Laboratory tests on a limited number of samples indicate, when using the screw and compression washer mounting technique, a screw torque of 6 to 8 in · lbs is sufficient to provide maximum power dissipation capability. The compression washer helps to maintain

a constant pressure on the package over time and during large temperature excursions.

Destructive laboratory tests show that using a hex head 4–40 screw, without washers, and applying a torque in excess of 20 in · lbs will cause the plastic to crack around the mounting hole, resulting in a loss of isolation capability.

for Isolated Package

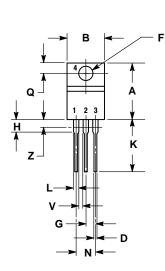

Additional tests on slotted 4–40 screws indicate that the screw slot fails between 15 to 20 in · lbs without adversely affecting the package. However, in order to positively ensure the package integrity of the fully isolated device, ON Semiconductor does not recommend exceeding 10 in · lbs of mounting torque under any mounting conditions.

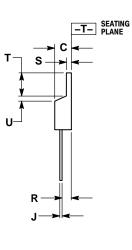

<sup>\*</sup>Measurement made between leads and heatsink with all leads shorted together

<sup>\*\*</sup> For more information about mounting power semiconductors see Application Note AN1040.
