

DATA SHEET CL-L104-MC3W1-F5

CITIZEN and CITIZEN are trademarks or registered trademarks of CITIZEN HOLDINGS CO., LTD. JAPAN.

1. Scope of Application

This data sheet is applied to the chip type LED lamp , model CL-L104-MC3W1-F5.

 $2. \ Part \ code$

CL- <u>L104</u> - <u>M</u> C <u>3</u> W <u>1</u> -F5
SeriesL104 : White power LED for general lighting.
Special specifications M : General Color Rendering Index Typ.85 type.
Watt class C3 : 3 watt package.
Lighting color W1 : Compliance with ANSI C78.377-2008, 3-Step MacAdam ellipse, Correlated Color Temperature 4000K.

Symbol	CITILED
Name	CL-L104-MC3W1-F5
CITIZEN	ELECTRONICS CO.,LTD. JAPAN

It has a protection device built in as a protection circuit against static electricity.

4. Performance

($\underline{1}$) Absolute Maximum Rating

	0		
Parameter	Symbol	Rating Value	Unit
Power Dissipation	P _D	4.2	W
Forward Current	$I_{\rm F}$	420	mA
Mnimum current	I_{FMin}	30	mA
Reverse Current	I _R	1	mA
Operating Temperature	T _{OP}	$-30 \sim +85$	С
Storage Temperature	T_{ST}	-40 ~ +100	С
Junction Temperature	Tj _{Max}	120	С

*1 D.C. Current : $Tj = Tc + Rj - c \times P_D$

Symbol	CITILED
Name	CL-L104-MC3W1-F5

5. Characteristics

•Forward Current vs. Forward Voltage

 $\boldsymbol{\cdot}$ Forward Current vs. Chromaticity Coordinate

•Case Temperature vs. Chromaticity Coordinate

 $\boldsymbol{\cdot}$ Forward Current vs. Relative Luminous Flux

6. Reliability

(1) Details of the tests

Test Item	Test Condition
	Ta=-30 C, I_F =350 mA× 1000 hours(with Al-fin)
Continuous Operation Test	Ta=60 C, I_F =350 mA× 1000 hours(with Al-fin)
	Ta=85 C, I _F =350 mA× 1000 hours(with Al-fin)
Low Temperature Storage Test	-40 C × 1000 hours
High Temperature Storage Test	$100 \text{ C} \times 1000 \text{ hours}$
Moisture-proof Test	60 C, 90 %RH for 1000 hours
Thermal Shock Test	-40 C \times 30 minutes – 100 C \times 30 minutes, 100 cycle

(2) Judgment Criter	ria of Fail	ure for Reliability T	est	(Ta=25 C)
Measuring Item	Sumbol	Measuring Condition	Judgment Criteri	a for Failure

Measuring Item	Symbol	Measuring Condition	Judgment Criteria for Failure
Forward Voltage	$V_{\rm F}$	I_F =350mA	> U × 1.1
Total Luminous Flux	Φ_V	I_F =350mA	$< S \times 0.85$

U defines the upper limit of the specified characteristics. S defines the initial value.

Note: Measurement shall be taken between 2 hours and 24 hours, and the test pieces should be returned to the normal ambient conditions after the completion of each test.

7. Packing Specifications

(1) Packing

An empty tray is placed on top of a five-tier tray which contain 50 pieces each. The set of six trays is banded together with two rubber bands. (Smallest packing unit: 250 pieces)

A label with product name, quantity, lot number is placed on the upper empty tray.

Tray (Dimensions: $310 \times 210 \times 11$ mm / Materials: Electrically conductive PS)

< Packing figure >

Product 50pcs/tray

8. Precautions

 (1) 1. Handling with care for this product Both the light emitting area and white dam over the Please avoid the resin area from being pressed, strategies, edge of reflector part) because the function, per are negatively impacted. Please be aware that this product should not come in while incomparing in your lighting encountry or your lighting encountry. 	essed, rubbed, come erformance and relia into contact with an	e into contact with sharp metal nail ability of this product ny other parts
while incorporating in your lighting apparatus or y	our other products.	
 (2) Countermeasure against static electricity Handling of this product needs countermeasures ag because this is a semiconductor product. Please take adequate measures to prevent any stat such as the wearing of a wristband or anti-static g Every manufacturing facility in regard to the product and conveyance unit) should be connected to grour ESD sensitivity of this product is over 1000V (HBM - After assembling the LEDs into your final product whether the assembled LEDs are damaged by stat It is easy to find static damaged LED dies by a light 	tic electricity being cloves when handlin uct (plant, equipme nd and please avoid A, based on JEITA (s), it is recommend tic electricity (electr	produced ng this product. ont, machine, carrier machine I the product to be electric-charged. ED-4701/304). led to check rical leak phenomenon) or not.
 (3) Caution of product assembly Regarding this product assembling on the heat sin It might be good for screw tightening on the heat In addition, please don't press with excess stress The condition of the product assembling on the he needs to be optimized according to the specificatio Roughness, unevenness and burr of surface negat between the product and heat sink and increase h Confidence of thermally and mechanical coupling by checking the mounting surface and measuring In order to reduce the thermal resistance at assen TIM (Thermal Interface Material) on whole conta In case of using thermal grease for the TIM, it mi on the contact surface of the product. In case of us it might be good to make sure that the product is when the screws are tightened for assembly. 	sink to do tempora on the product. eat sink and the cor on of the heat sink. tively impact therm heat thermal resista g between the product g the case temperate nbly, it might be go act surface of the pr ight be good to appl sing thermal sheet	ry tightening and final tightening. htrol of screw tightening torque al bonding ance between them. htt and heat sink are confirmed ure of the product. od to use boduct. ly uniformly for the TIM,

	Symbol Name	CITILED CL-L104-MC3W1-F5

(4) Thermal Design

-The thermal design to draw heat away from the LED junction is most critical parameter for an LED illumination system. High operating temperatures at the LED junction adversely affect the performance of LED's light output and lifetime. Therefore the LED junction temperature should not exceed the absolute maximum rating in LED illumination system.

The LED junction temperature while operation of LED illumination system depends upon thermal resistance of internal LED package (Rj-c), outer thermal resistances of LED package, power loss and ambient temperature. Please take both of the thermal design specifications and ambient temperature conditions into consideration for the setting of driving conditions.
For more information, please refer to application note "Thermal Management".

(5) Driving Current

-A constant current is recommended as an applying driving current to this product.

In the case of constant voltage driving, please connect current-limiting resistor to each products in series and control the driving current to keep under the absolute maximum rating forward current value. Electrical transient might apply excess voltage, excess current and reverse voltage to the product(s). They also affect negative impact on the product(s) therefore please make sure that no excess voltage,

excess current and reverse voltage is applied to the product(s)

when the LED driver is turn-on and/or turn-off.

-For more information, please refer to application note "Driving".

(6) Lighting at a minimum current value

-In a case where the minimum current(IF min) is applied to the product, some of LED dice in the product might look different in their brightness due to the individual difference of the LED dice, and they are not failed.

(7) Electrical Safety

-This product is designed and produced according to IEC 62031:2008

(IEC 62031:2008 LED modules for general lighting. Safety specification)

-Dielectric voltage withstand test has been conducted on this product to see any failure after applying voltage between active pads and aluminum section of the product, and to pass at least 500V.

-Considering conformity assessment for IEC62031:2008, almost all items of the specification depend upon your final product of LED illumination system.

Therefore, please confirm with your final product for electrical safety of your product. As well, the products comply with the criteria of IEC62031:2008 as single LED package.

8. Precautions (continued)

(8) Recommended soldering Condition (This product is not adaptable to reflow process.) -For manual soldering Please use lead-free soldering. Soldering shall be implemented using a soldering bit at a temperature lower than 350C, and shall be finished within 3.5 seconds for one land. No external force shall be applied to resin part while soldering is implemented. Next process of soldering should be carried out after the product has return to ambient temperature. -For soldering correction Regarding soldering correction, above conditions shall be applied. Contacts number of soldering bit should be within twice for each terminal as a correction. * Citizen Electronics cannot guarantee if usage exceeds these recommended conditions. Please use it after sufficient verification is carried out on your own risk if absolutely necessary. (9) Eve Safety -The International Electrical Commission (IEC) published in 2006 IEC 62471 "2006 Photobiological safety of lamps and lamp systems" which includes LEDs within its scope. -When sorting single LEDs according to IEC 62471, almost all white LEDs can be classified as belonging to either Exempt Group (no hazard) or Risk Group 1 (low risk). However, Optical characteristics of LEDs such as radiant flux, spectrum and light distribution are factors that affect the risk group determination of the LED, and especially a high-power LED, that emits light containing blue wavelengths, might have properties equivalent to those of Risk Group 2 (moderate risk). Great care should be taken when directly viewing an LED that is driven at high current, has multiple uses as a module or when focusing the light with optical instruments, as these actions might greatly increase the hazard to your eyes. -It is recommended to regard the evaluation of stand-alone LED packages as a reference and to evaluate your final product. (10) This product is not designed for usage under the following conditions. If the product might be used under the following conditions, you shall evaluate its effect and appropriate them. In places where the product might: -directly and indirectly get wet due to rain and/or at place with the fear. -be damage by seawater and/or at place with the fear -be exposed to corrosive gas (such as Cl2, H2S, NH3, SOx, NOx and so on) and/or at place with the fear. -be exposed to dust, fluid or oil and/or at place with the fear.
