

3.3V LVDS High-Speed Differential Line Driver and Receiver

Features

- Signaling Rates >660 Mbps (330 MHz)
- Single 3.3V Power Supply Design
- Driver:
 - ±350mV Differential Swing into a 100-ohm load
 - Propogation Delay of 1.5ns Typ.
 - Low Voltage TTL (LVTTL) Inputs are 5V Tolerant
- · Receiver:
 - Accepts ±50mV (min.) Differential Swing with up to 2.0V ground potential difference
 - Propagation Delay of 3.3ns Typ.
 - Low Voltage TTL (LVTTL) Outputs
 - Open, Short, and Terminated Fail Safe
- Industrial Temperature Operating Range: -40°C to 85°C
- Meets or Exceeds IEEE 1596.3 SCI Standard
- Meets or Exceeds ANSI/TIA/EIA-644 LVDS Standard
- Bus-Terminal ESD exceeds 12kV
- Packaging (Pb-free & Green available):
 - 8-pin SOIC or MSOP

Description

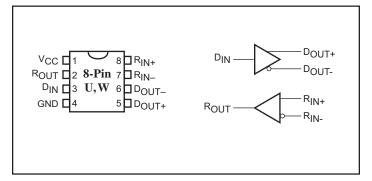

The PI90LV179 is a differential line driver and receiver (transceiver) that is compliant with the IEEE 1596.3 SCI and ANSI/TIA/EIA-644 LVDS standards. This device uses low-voltage differential signaling (LVDS) to achieve data rates in excess of 660 Mbps while being less susceptible to noise than single-ended transmission.

The driver translates a low-voltage TTL/CMOS input into a low-voltage (350mV typical) differential output signal. The receiver translates a differential 350mV input signal to a 3V CMOS output level.

Applications

Applications include point-to-point and multidrop baseband data transmission over a controlled impedance media of approximately 100 ohms. These include intra-system connections via printed circuit board traces or cables, hubs and routers for data communications; PBXs, switches, repeaters and base stations for telecommunications and other applications such as digital cameras, printers and copiers.
