## Flow sensor Immersion sensor with integrated processor FCS-G1/2A4P-LIX-H1141/D037

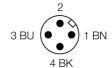

| Type code<br>Ident no.             | FCS-G1/2A4P-LIX-H1141/D037<br>6870058 |
|------------------------------------|---------------------------------------|
|                                    |                                       |
| Oil operating range                | 3300 cm/s                             |
| Stand-by time                      | approx. 10 s                          |
| Setting time                       | 115 s                                 |
| Medium temperature                 | -2070 °C                              |
| Operating voltage                  | 2126VDC                               |
| No-load current I₀                 | ≤ 100 mA                              |
| Output function                    | Analog output                         |
| Short-circuit protection           | yes                                   |
| Reverse polarity protection        | yes                                   |
| Current output                     | 420mA                                 |
| Load                               | ≤ <b>500</b> Ω                        |
| Protection class                   | IP67                                  |
| Housing material                   | Plastic, PBT                          |
| Sensor material                    | stainless steel, AISI 316Ti           |
| Max. tightening torque housing nut | 100 Nm                                |
| Connection                         | male, M12 x 1                         |
| Pressure resistance                | 100 bar                               |
| Mechanical connection              | G ½"                                  |
| Flow state display                 | LED chain, red (1x), green (5x)       |
| LED display                        | red = 4 mA                            |
|                                    | 1x green > 4 mA                       |
|                                    | 2x green > 8 mA                       |
|                                    | 3x green > 12 mA                      |
|                                    | 4x green > 16 mA                      |
|                                    | 5x green = 20 mA                      |

- Flow sensor for liquid media
- Calorimetric principle
- Adjustment via potentiometer
- LED band
- 3-wire DC, 21...26 VDC
- 4...20 mA analog output
- Plug-in device, M12 x 1

## Wiring diagram

## **Functional principle**

Our insertion - flow sensors operate on the principle of thermodynamics. The measuring probe is heated by several °C as against the flow medium. When fluid moves along the probe, the heat generated in the probe is dissipated. The resulting temperature is measured and compared to the medium temperature. The flow status of every medium can be derived from the evaluated temperature difference. Thus TURCK's wear-free flow sensors reliably monitor the flow of gaseous and liquid media.
