

Isolating switching amplifier
1-channel
IM1-12EX-MT

The single-channel isolating switching amplifier IM1-12EX-R is equipped with an intrinsically safe input circuit.

Sensors according to EN 60947-5-6 (NAMUR) can be connected to the device or potential-free contactors.

The output circuits feature two potential-free and parallel controlled MOSFET transistors for switching of voltages up to 250 VAC at a maximum frequency of 1 kHz.

Three front panel switches are available to set the output mode separately for each channel (NO or NC mode), as well as to enable/disable wire-break (WB) and short-circuit (SC) monitoring separately.

When using mechanical contacts, wire-break and short-circuit monitoring must be switched off or the contact must be wired with resistors (II) (see circuit diagram).

The green LED indicates operational readiness. The output switching status is indicated yellow by the two color LED. In the event of input circuit errors the dual color LED changes to red, provided the input circuit monitoring function is activated. Thereupon the MOSFET outputs are inhibited.

- Intrinsically safe input circuits Ex ia
- Installation in zone 2
- FM, NEPSI
- Application area acc. to ATEX: II (1) G, II (1) D; II 3 G
- Two transistor outputs (MOSFET)
- Adjustable signal flow direction (NO/NC)
- Input circuit monitoring of wire-break/short-circuit (ON/OFF switchable)
- Removable terminal blocks
- Complete galvanic separation
