DATA SHEET

An ON Semiconductor Company

LC87F83P7PB LC87F83P7PBU

CMOS IC
FROM 256K byte, RAM 12K byte on-chip
8-bit ETR Microcontroller

Overview

The LC87F83P7PB/P7PBU is an 8-bit ETR microcomputer that, centered around a CPU running at a minimum bus cycle time of 74.07 ns, integrate on a single chip a number of hardware features such as 256K-byte flash ROM (onboard rewritable), 12K-byte RAM, Onchip debugging, direct control of necessary CD mechanism and CD-DSP for car audio, in the radio reception, the on-chip high-performance PLL circuit provides a high-speed Lock-Up circuit to search for alternative frequency of RDS in a short time, the ability to control the C/N characteristics of a local oscillator, and the high S/N through the direct PLL configuration, two sophisticated 16-bit timers/counters (may be divided into 8-bit timers), four 8-bit timers with a prescaler, a base timer serving as a time-of-day clock, two synchronous SIO ports (with automatic block transmission/reception capabilities), an asynchronous/synchronous SIO port, two UART ports (full duplex), four 12-bit PWM channels, an 8-bit 10-channel AD converter, a high-speed clock counter, a system clock frequency divider, and a 29-source 10-vector interrupt feature.

Features

■Flash ROM

- Single 5V power supply, on-board writeable
- Block erase in 512 byte units
- 262144 × 8 bits (LC87F83P7PB/P7PBU)

■RAM

- 12288 × 9 bit (LC87F83P7PB/P7PBU)

■Minimum Bus Cycle Time

- 74.07ns (13.5MHz)

Note: Bus cycle time indicates the speed to read ROM.

* This product is licensed from Silicon Storage Technology, Inc. (USA), and manufactured and sold by SANYO Semiconductor Co., Ltd.

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment. The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for new introduction or other application different from current conditions on the usage of automotive device, communication device, office equipment, industrial equipment etc. , please consult with us about usage condition (temperature, operation time etc.) prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

SANYO Semiconductor Co., Ltd.

LC87F83P7PB/P7PBU

■ Minimum Instruction Cycle Time (tCYC)

- 222ns (13.5MHz)

■ Ports

- Normal withstand voltage I/O ports

Ports whose I/O direction can be designated in 1 bit units: 57 (P1n, P2n, P30 to P35, P70 to P73, P8n, PBn, PCn, SI2Pm, PWM0, PWM1, XT2, n=0 to 7, m=0 to 3)

Ports whose I/O direction can be designated in 2 bit units: 16 (PE_n, PF_n n=0 to 7)

Ports whose I/O direction can be designated in 4 bit units: 8 (P0_n n=0 to 7)

- Normal withstand voltage input ports: 1 (XT1)
- Main charge pump output ports: 1 (EO)
- Sub charge pump output ports: 1 (SUBPD)
- AM local oscillator input ports: 1 (AMIN)
- FM local oscillator input ports: 1 (FMIN)
- High-speed, universal counter input ports: 1 (HCTR)
- Universal counter input ports: 1 (LCTR)
- Internal low voltage output ports: 1 (VREG)
- Dedicated oscillator ports: 2 (CF1, CF2)
- Reset pin: 1 (RES)
- Digital power pins: 6 (VSS_n, VDD_n n=1, 2, 4)
- Analogue power pins: 2 (AVSS, AVDD)

■ Timers

- Timer 0: 16-bit programmable timer/counter with capture register
 - Mode 0: 8-bit programmable timer with an 8-bit programmable prescaler (with two 8-bit capture registers) × 2 channels
 - Mode 1: 8-bit programmable timer with an 8-bit programmable prescaler (with two 8-bit capture registers) + 8-bit programmable counter (with two 8-bit capture registers)
 - Mode 2: 16-bit programmable timer with an 8-bit programmable prescaler (with two 16-bit capture registers)
 - Mode 3: 16-bit programmable counter (with 2 16-bit capture registers)
- Timer 1: 16-bit programmable timer/counter that support PWM/ toggle output
 - Mode 0: 8-bit programmable timer with an 8-bit prescaler (with toggle outputs) + 8-bit programmable timer/counter (with toggle outputs)
 - Mode 1: 8-bit PWM with an 8-bit prescaler × 2 channels
 - Mode 2: 16-bit programmable timer/counter with an 8-bit prescaler (with toggle outputs) (toggle outputs also from the lower-order 8 bits)
 - Mode 3: 16-bit programmable timer with an 8-bit prescaler (with toggle outputs) (The lower-order 8 bits can be used as PWM.)
- Timer 4: 8-bit programmable timer with a 6-bit prescaler
- Timer 5: 8-bit programmable timer with a 6-bit prescaler
- Timer 6: 8-bit programmable timer with a 6-bit prescaler (with toggle outputs)
- Timer 7: 8-bit programmable timer with a 6-bit prescaler (with toggle outputs)
- Base timer
 - 1) The clock is selectable from the subclock (32.768kHz crystal oscillator), cycle clock (tCYC), and timer 0 prescaler output.
 - 2) Interrupts programmable in 5 different time schemes.

■ High speed clock counter

- 1) Can count clocks with a maximum clock rate of 20MHz (When High-speed clock counter is used, timer 0 cannot be used).
- 2) Can generate output real time.

LC87F83P7PB/P7PBU

■ SIO: 3 channels

- SIO 0: 8 bit synchronous serial interface
 - 1) LSB first/MSB first mode selectable
 - 2) Built-in 8-bit baudrate generator (4/3 to 512/3 tCYC transfer clock cycle)
 - 3) Automatic continuous data transmission (1 to 256 bits)
- SIO 1: 8 bit asynchronous/synchronous serial interface
 - Mode 0: Synchronous 8-bit serial I/O (2 to or 3 to wire configuration, 2 to 512 tCYC transfer clocks)
 - Mode 1: Asynchronous serial I/O (Half-duplex, 8 data bits, 1 stop bit, 8 to 2048 tCYC baudrates)
 - Mode 2: Bus mode 1 (start bit, 8 data bits, 2 to 512 tCYC transfer clocks)
 - Mode 3: Bus mode 2 (start detect, 8 data bits, stop detect)
- SIO2: 8 bit synchronous serial interface
 - 1) LSB first mode
 - 2) Built-in 3-bit baudrate generator (4/3 to 512/3 tCYC transfer clock cycle)
 - 3) Automatic continuous data transmission (1 to 32 bytes)

■ UART: 2 channels

- 1) Full duplex
- 2) 7/8/9 bit data bits selectable
- 3) 1 stop bit (2 bits in continuous transmission mode)
- 4) Built-in 8-bit baudrate generator (with baudrates of 16/3 to 8192/3 tCYC)

■ AD Converter: 8 bits × 10 channels

■ PWM: Multifrequency 12-bit PWM × 4 channels

■ Remote control receiver noise filtering function (sharing pins with P73, INT3, and T0IN)

- 1) Noise filter time constant selectable from 1 tCYC, 32 tCYC, and 128 tCYC
- 2) The noise filtering function is available for the INT3, T0IN, or T0HCP signal at P73. When P73 is read with an instruction, the signal level at that pin is read regardless of the availability of the noise filtering function.

■ Watchdog timer

- External RC watchdog timer
- Interrupt and reset signals selectable

■ Interrupts

- 29 sources, 10 vector addresses
 - 1) Provides three levels (low (L), high (H), and highest (X)) of multiplex interrupt control. Any interrupt requests of the level equal to or lower than the current interrupt are not accepted.
 - 2) When interrupt requests to two or more vector addresses occur at the same time, the interrupt of the highest level takes precedence over the other interrupts. For interrupts of the same level, the interrupt into the smallest vector address takes precedence.

No.	Vector	Selectable Level	Interrupt signal
1	00003H	X or L	INT0
2	0000BH	X or L	INT1
3	00013H	H or L	INT2/T0L/INT4
4	0001BH	H or L	INT3/INT5/Base timer (BT0, 1)
5	00023H	H or L	T0H/INT6
6	0002BH	H or L	T1L/T1H/INT7
7	00033H	H or L	SIO0/UART1 receive/UART2 receive
8	0003BH	H or L	SIO1/SIO2/UART1 transmit/UART2 transmit
9	00043H	H or L	ADC/T6/T7/PWM4, PWM5
10	0004BH	H or L	Port 0/T4/T5/PWM0, PWM1

- Priority levels $X > H > L$
- Of interrupts of the same level, the one with the smallest vector address takes precedence.
- The Base timers are two interrupt sources of BT0 and BT1, it is one interrupt source by PWM0 and 1, it is one interrupt source by PWM4 and 5.

■ Subroutine stack levels

- 6144 levels maximum (1/2 of capacity of RAM, the stack is allocated in RAM.)

■ High-speed multiplication/division instructions

- 16 bits \times 8 bits (5 tCYC execution time)
- 24 bits \times 16 bits (12 tCYC execution time)
- 16 bits \div 8 bits (8 tCYC execution time)
- 24 bits \div 16 bits (12 tCYC execution time)

■ Oscillation circuits

- RC oscillator circuit (internal): For system clock
- Main XT crystal oscillator circuit: For system clock with internal Rf and external Rd
- Sub XT crystal oscillator circuit: For time-of-day clock, for low-speed system clock with internal Rf and external Rd
- Multifrequency RC oscillator circuit (internal): For system clock
- PLL circuit (internal): For AM/FM tuner

■ System clock divider function

- Can run on low current.
- The minimum instruction cycle selectable from 222ns, 444ns, 888ns, 1.78 μ s, 3.55 μ s, 7.10 μ s, 14.2 μ s, 28.4 μ s, and 56.8 μ s.

■ PLL block

- Twelve reference frequencies when main XT is 13.5MHz: 1kHz, 3kHz, 3.125kHz, 5kHz, 6.25kHz, 9kHz, 10kHz, 12.5kHz, 25kHz, 30kHz, 50kHz, and 100kHz
- Range of input frequency
 - 1) AMIN: 0.5 to 40MHz
 - 2) FMIN: 10 to 150MHz
 - 3) HCTR: 0.4 to 12MHz
 - 4) LCTR: 100 to 500kHz
- Supports dead zone control.
- Built-in unlock detection circuit.

■ Universal counter

- This 20-bit counter can be used for frequency measurement.

■ Standby function

- HALT mode: Halts instruction execution while allowing the peripheral circuits to continue operation.
 - 1) Oscillation is not halted automatically.
 - 2) Canceled by system reset, detection VDET0 or occurrence of interrupt.
- HOLD mode: Suspends instruction execution and the operation of the peripheral circuits.
 - 1) The main XT crystal oscillators, RC, and sub XT crystal oscillators automatically stop operation.
 - 2) There are four ways of resetting the HOLD mode.
 - (1) Setting the Reset pin to the lower level.
 - (2) Voltage descent detection (VDET1)
 - (3) Setting at least one of the INT0, INT1, INT2, INT4, and INT5 pins to the specified level.
 - (4) Having an interrupt source established at port 0.
- X'tal HOLD mode: Suspends instruction execution and the operation of the peripheral circuits except the base timer.
 - 1) The main XT crystal oscillators, and RC oscillators automatically stop operation.
 - 2) The state of crystal oscillation established when the HOLD mode is entered is retained.
 - 3) There are five ways of resetting the X'tal HOLD mode.
 - (1) Setting the Reset pin to the low level.
 - (2) Voltage descent detection (VDET0)
 - (3) Setting at least one of the INT0, INT1, INT2, INT4, and INT5 pins to the specified level.
 - (4) Having an interrupt source established at port 0.
 - (5) Having an interrupt source established in the base timer circuit.

LC87F83P7PB/P7PBU

■ Reset

- External reset
- Voltage descent detection (VDET0, VDET1) reset circuit (internal)

■ Onchip debugging function

- Permits software debugging with the test device installed on the target board.

■ Shipping form

- QIP100E (Lead Free Product)

■ Flash ROM version

- LC87F83P7PB
- LC87F83P7PBU (User writing)

LC87F83P7PB/P7PBU

Absolute Maximum Ratings at Ta = 25°C, VSS1 = VSS2 = VSS4 = AVSS = 0V

Moreover, please make the pull-down of this terminal effective with software. 	No
AMIN	91	I	<ul style="list-style-type: none"> • Input terminal for AM VCO (local oscillator) • The signal input to this pin must be capacitor coupled (Note.1) • Input frequency: 0.5 to 40MHz • Please open the terminal when you do not use this terminal. Moreover, please make the pull-down of this terminal effective with software. 	No
HCTR	92	I	<ul style="list-style-type: none"> • Input terminal for Universal counter • The signal input to this pin must be capacitor coupled (Note.1) • Input frequency: 0.4 to 12MHz • Please open the terminal when you do not use this terminal. Moreover, please make the pull-down of this terminal effective with software. 	No
LCTR	93	I	<ul style="list-style-type: none"> • Input terminal for Universal counter • The signal input to this pin must be capacitor coupled (Note.1) • Input frequency: 100 to 500kHz • Please open the terminal when you do not use this terminal. Moreover, please make the pull-down of this terminal effective with software. 	No
VREG	87	O	<ul style="list-style-type: none"> • Internal low voltage output • Connect a bypass capacitor to this pin. (Refer to Page27) 	No

Note.1: Put the coupling capacitor near the terminal. About 100pF of capacity is preferable.
Especially, adjust the capacity of HCTR and LCTR to 1000pF or less.

LC87F83P7PB/P7PBU

Port Output Configuration

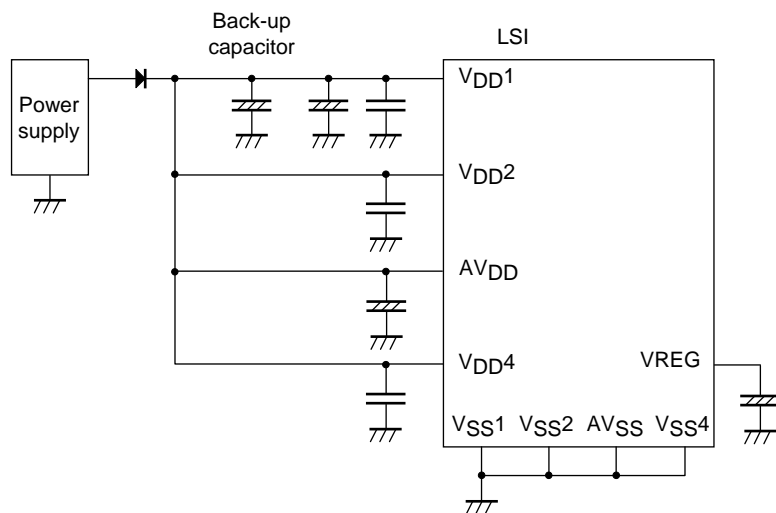

The table below lists the types of port outputs and the presence/absence of a pull-up resistor. Data can be read into any input port even if it is in the output mode.

Port	Options selected in units of	Option type	Output type	Pull-up resistor
P00 to P07	1 bit	1	CMOS	Programmable (Note 1)
		2	N-channel open drain	No
P10 to P17 P20 to P27 P30 to P35	1 bit	1	CMOS	Programmable
		2	N-channel open drain	Programmable
PB0 to PB7 PC0 to PC7	1 bit	1	CMOS	Programmable
		2	N-channel open drain	Programmable
PE0 to PE7 PF0 to PF7	-	No	CMOS	Programmable
P70	-	No	N-channel open drain	Programmable
P71 to P73	-	No	CMOS	Programmable
P80 to P87	-	No	N-channel open drain	No
SI2P0, SI2P2, SI2P3 PWM0, PWM1	-	No	CMOS	No
SI2P1	-	No	CMOS (when selected as ordinary port) N-channel open drain (When SIO2 data is selected)	No
FMIN, AMIN, HCTR, LCTR	-	No	Input only	No
EO, SUBPD	-	No	Output only	No
XT1	-	No	Input only	No
XT2	-	No	Output for 32.768kHz quartz oscillator N-channel open drain (when in general-purpose output mode)	No

Note 1: Programmable pull-up resistors for port 0 are controlled in 4 bit units (P00 to 03, P04 to 07).

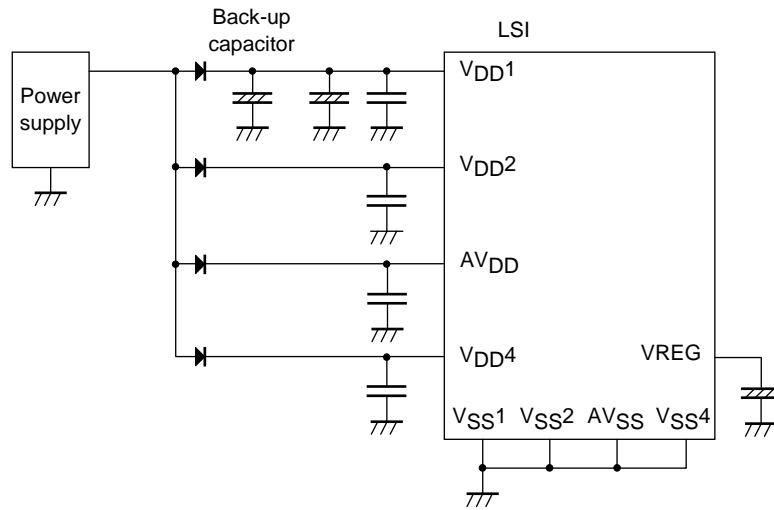

*1: Make the following connection to minimize the noise input to the V_{DD1} pin and prolong the backup time. Be sure to electrically short the V_{SS1}, V_{SS2}, AV_{SS} and V_{SS4} pins.

(Example 1) When backup is active in the HOLD mode, the high level of the port outputs is supplied by the backup capacitors.

LC87F83P7PB/P7PBU

(Example 2) The high-level output at the ports is unstable when the HOLD mode backup is in effect.

VDD1, VSS1 Terminal condition

It is necessary to place capacitors between VDD1 and VSS1 as describe below.

- Place capacitors as close to VDD1 and VSS1 as possible.
- Place capacitors so that the length of each terminal to the each leg of the capacitor be equal ($L1 = L1'$, $L2 = L2'$).
- Place high capacitance capacitor C1 and low capacitance capacitor C2 in parallel.
- Capacitance of C2 must be more than $0.1\mu\text{F}$.
- Please mount a suitable capacitor about C1.
- Use thicker pattern for VDD1 and VSS1.

AVDD, AVSS Terminal condition

It is necessary to place capacitors between AVDD and AVSS as describe below.

- Place capacitors as close to AVDD and AVSS as possible.
- Place capacitors so that the length of each terminal to the each leg of the capacitor be equal ($L3 = L3'$).
- Capacitance of C3 must be more than $1\mu\text{F}$.
- Use thicker pattern for AVDD and AVSS.

VREG, AVSS Terminal condition

It is necessary to place capacitors between VREG and AVSS as describe below.

- Place capacitors as close to VREG and AVSS as possible.
- Place capacitors so that the length of each terminal to the each leg of the capacitor be equal ($L4 = L4'$).
- Capacitance of C4 must be more than $1\mu\text{F}$ to $10\mu\text{F}$.
- Use thicker pattern for VREG and AVSS.

VDDx, VSSx Terminal condition x=2, 4

It is necessary to place capacitors between VDDx and VSSx as describe below.

- Place capacitors as close to VDDx and VSSx as possible.
- Place capacitors so that the length of each terminal to the each leg of the capacitor be equal ($L5 = L5'$).
- Capacitance of C5 must be more than $0.1\mu\text{F}$.
- Use thicker pattern for VDDx and VSSx.

(Note) Select CRES and RRES value to assure that reset is generated after the VDD becomes higher than the minimum operating voltage.

Recommended value
 CRES: $0.47\mu\text{F}$
 RRES: $270\text{k}\Omega$

Figure 1 Reset circuit

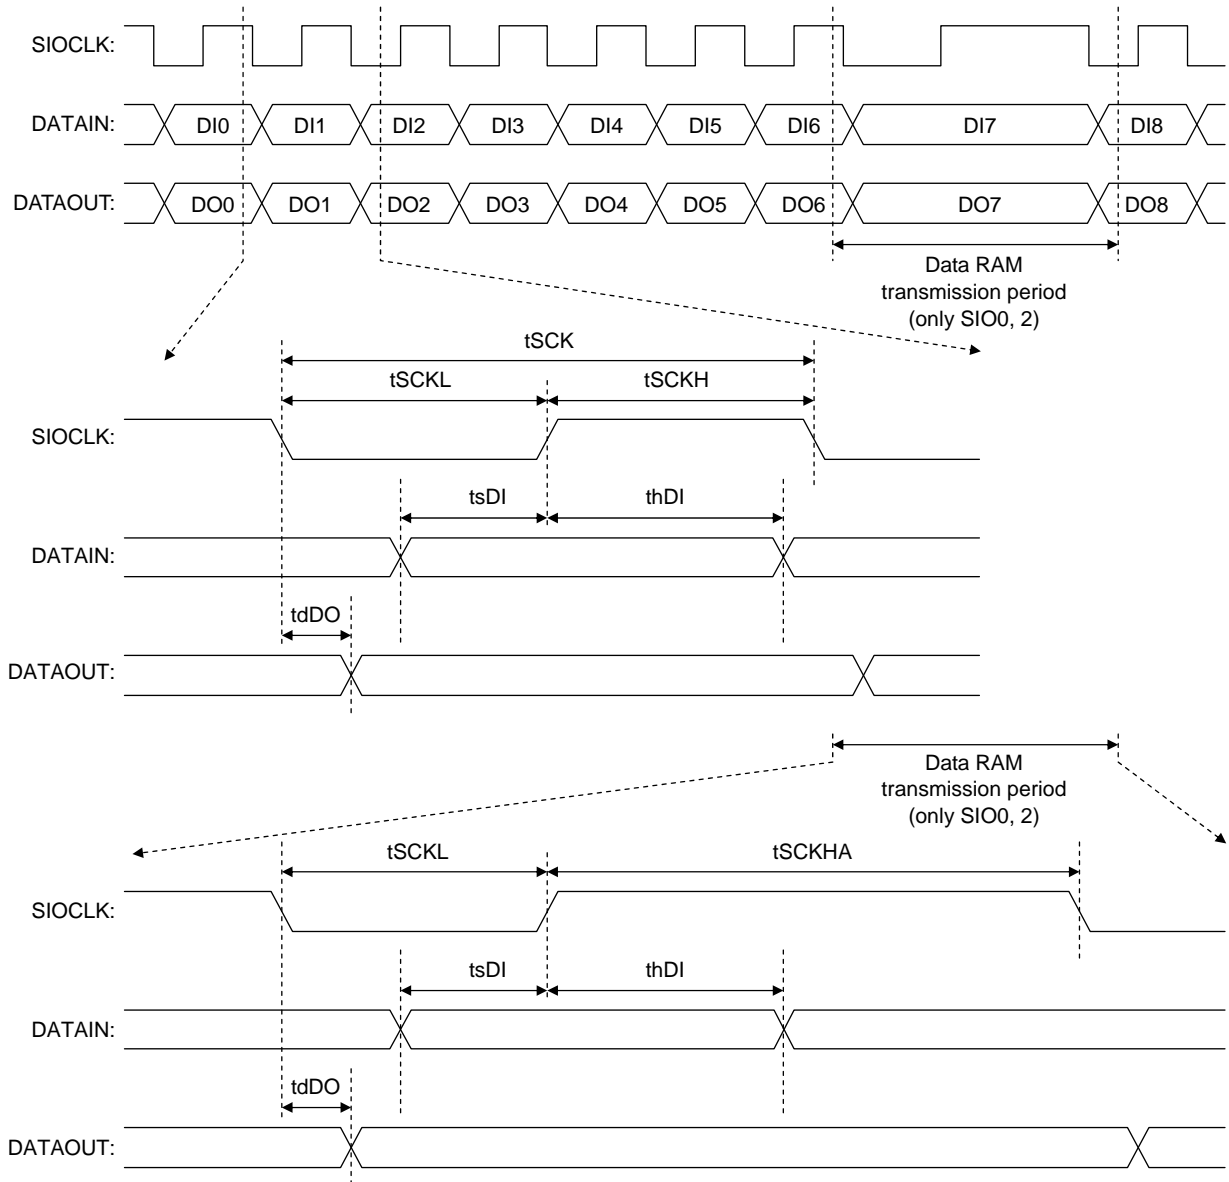

Figure 2 Serial input/output test condition

Figure 3 Pulse input timing condition

Concerning differences of the Mask Version and the Flash Version

- 1) Although the electrical specifications are the same for the mask and flash versions, differences may arise in the actual values for threshold level of the input ports, output current of the output ports, input sensitivity, etc. Variations may also be found from lot to lot. It must therefore be kept in mind that if finished products are designed using the actual values of the samples, these variations may prevent the finished products from operating.
- 2) The undesirable radiation level is not listed among the specifications. Since differences may arise between the mask and flash versions, this must be kept in mind when designing the finished products.

Concerning differences of ROM writing in our company and user

	ROM writing in out company	ROM writing in user
Name of articles	LC87F83P7PB-FXXXX-E	LC87F83P7PBU-QIP-E
Tape Out	Necessary	Unnecessary
Data confirmation after writing	Our company	User
Terminal destruction confirmation after writing	Our company	User
Terminal curved confirmation after writing	Our company	User

The W87F83256Q circuit board must be requested as the data writing board.
 The AF-9708 made by Ando is recommended as the ROM writer. Confirm ROM writer's version to the office.

Method of ordering ROM when ROM writing by our company is done

Please submit Program of flash ROM and Flash ROM order material to the person in charge of each business.

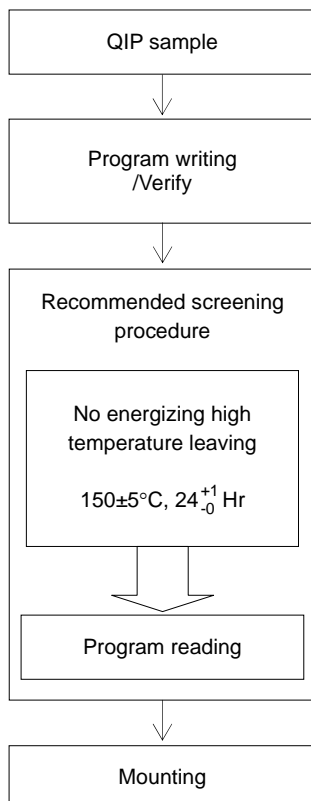

Condition before it mounts

1. Writing by user

PROM unwriting shipment goods
 It is recommended to mount according to the following procedures.

2. Writing by our company

PROM writing shipment goods
 Please mount according to the following procedures.

LC87F83P7PB/P7PBU

Example of Writing Data onto the on-chip Flash ROM of the LC87F83P7PBU (using the AF-9708)

I. Writing the data using the AF-9708 (made by ANDO) PROM programmer

1. ROMTYPE settings

ROMTYPE → Select [MAKER] → **SET**
→ Select [SANYO] → **SET**
→ Select [LC87F83P7PA] → **SET**

It corresponds now PROM PROGRAMMER AF-9708 (made of ANDO). Please inquire of the person in charge of each business.

2. Start/Stop address settings

FUNCTION → **1**: Address setting mode

Type No.	ROM capacity	Stop address
LC878396PB	96KB	3FFFF
LC8783C8PB	128KB	
LC8783G1PB/G0PB	160KB	
LC8783J2PB/J3PB	192KB	
LC8783M4PB	224KB	
LC8783P6PB/P7PB	256KB	

3. Executing data erasure

DEVICE → **B** → **SET**: For data erasure execution.

4. Executing data writing

DEVICE → **F** → **SET**: For program and verify execution.

II. Writing board

The writing board is shown in the figure below. The position of pin 1 must be checked before connecting to the EPROM programmer.

To be used for the general-purpose EPROM programmer: Model W87F83256Q

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- Regarding monolithic semiconductors, if you should intend to use this IC continuously under high temperature, high current, high voltage, or drastic temperature change, even if it is used within the range of absolute maximum ratings or operating conditions, there is a possibility of decrease reliability. Please contact us for a confirmation.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written consent of SANYO Semiconductor Co.,Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO Semiconductor Co.,Ltd. product that you intend to use.
- Upon using the technical information or products described herein, neither warranty nor license shall be granted with regard to intellectual property rights or any other rights of SANYO Semiconductor Co.,Ltd. or any third party. SANYO Semiconductor Co.,Ltd. shall not be liable for any claim or suits with regard to a third party's intellectual property rights which has resulted from the use of the technical information and products mentioned above.

This catalog provides information as of October, 2012. Specifications and information herein are subject to change without notice.
