

CliQ DIN Rail Power Supply

24V 120W 3 Phase / DRP024V120W3AA

Highlights & Features

- Reliable design, with expected life of 10 years
- Compact, rugged design for ease of handling and installation
- Multiple connections to terminals allowed
- Designed for Class I Div. 2 Hazardous Locations environments
- Meets worldwide safety requirements
- RoHS Directive 2011/65/EU Compliant
- Worldwide AC input range without power de-rating
- Overvoltage / Overcurrent / Over Temperature Protections
- 150% Power Boost (steady state peak load) for 3 seconds

Safety Standards

CB Certified for worldwide use

Model Number: DRP024V120W3AA
Unit Weight: 0.72kg
Dimensions (L x W x D): 121 x 70 x 118.4 mm

General Description

The DRP024V120W3AA is part of the CliQ series of DIN Rail power supplies from one of the world's largest power supply manufacturers and solution providers - Delta. This product provides an adjustable output capable of operating from input voltages at 85-264Vac, and a wide temperature range of -20°C to 75°C. With a compact, rugged aluminium case that meets shock and vibration requirements (in accordance to IEC60068-2-27 and IEC60068-2-6 respectively), and conformal-coated PCB assembly, this state of the art design is well suited to a broad variety of industrial applications worldwide.

Model Information

CliQ DIN Rail Power Supply

Model Number	Input Voltage Range	Output Voltage	Output Current
DRP024V120W3AA	320-575Vac (450-800Vdc)	24Vdc	5A

Model Numbering

DR	P	024V	120W	3	A	A
DIN Rail	Power Supply	Output Voltage	Output Power	Three Phase	CliQ Series	Metal Case

CliQ DIN Rail Power Supply

24V 120W 3 Phase / DRP024V120W3AA

Specifications

Input Ratings / Characteristics

Nominal Input Voltage	400-575Vac
Input Voltage Range	320-575Vac
Nominal Input Frequency	50-60Hz
Input Frequency Range	47-63Hz
Nominal DC Input Voltage	565-700Vdc
DC Input Voltage Range	450-800Vdc
Input Current	< 0.50A @ 400Vac, < 0.40A @ 500Vac
Efficiency	> 86.0% @ 3 x 400Vac, > 85.0% @ 3 x 500Vac
Max Inrush Current	< 30A @ 3 x 400Vac & 500Vac
Power Factor	Conform to EN61000-3-2 STD
Leakage Current	< 3.5mA @ 500Vac

Output Ratings / Characteristics

Nominal Output Voltage	24Vdc
Output Voltage Tolerance	± 2% (initial set point tolerance)
Output Voltage Adjustment Range	22-28Vdc
Output Current	5A
Output Power	120W
Line Regulation	< 0.5% typ. (@ 320-575Vac input, 100% load)
Load Regulation	< 1% typ. (@ 320-575Vac input, 0-100% load)
Residual Ripple / PARD (20MHz)	< 50mVpp / 240mVpp @ 25°C
Rise Time	< 100ms @ nominal input (100% load, 25°C)
Start-up Time	< 1000ms @ nominal input (100% load, 25°C)
Hold-up Time	> 35ms @ 3 x 400Vac, > 70ms @ 3 x 500Vac (100% load, 25°C)
Dynamic Response (Overshoot & Undershoot O/P Voltage)	± 5% @ 0-100% load
Start-up with Capacitive Loads	10,000µF Max

CliQ DIN Rail Power Supply

24V 120W 3 Phase / DRP024V120W3AA

Mechanical

Case Cover	Aluminium	
Dimensions (L x W x D)	121 x 70 x 118.4 mm	
Unit Weight	0.72kg	
Indicator	Green LED (DC OK)	
Cooling System	Convection	
Terminal	Input	M4 x 4 Pins (Rated 600V/20A)
	Output	M4 x 2 Pins (Rated 600V/20A)
Wire	Input	AWG 18-8
	Output	AWG 18-8
Mounting Rail	Standard TS35 DIN Rail in accordance with EN60715	

Environment

Surrounding Air Temperature	Operating	-20°C to +75°C
	Storage	-25°C to +85°C
Power De-rating	> 50°C de-rate power by 2.5% / °C > 70°C de-rate power by 4% / °C	
Operating Humidity	< 95% RH (Non-Condensing)	
Operating Altitude	2,000 Meters	
Shock Test (Non-Operating)	IEC60068-2-27, 30G (300m/S ²) for a duration of 18ms	
Vibration (Non-Operating)	IEC60068-2-6, 10Hz to 150Hz @ 50m/S ² (5G peak); 90 min per axis for all X, Y, Z direction	
Bump	IEC60068-2-29; 11ms / 10gn	
Pollution Degree	2	

Protections

Overvoltage	< 32V ±10%, SELV Output, Hicc-up Mode, Non-Latching (Auto-Recovery)
Overload / Overcurrent	> 150% of rated load current, Hicc-up Mode, Non-Latching (Auto-Recovery)
Over Temperature	< 80°C Surrounding Air Temperature @ 100% load, Non-Latching (Auto-Recovery)
Short Circuit	Hicc-up Mode, Non-Latching (Auto-Recovery when the fault is removed)
Degree of Protection	IPX0
Protection Against Shock	Class I with PE* connection

*PE: Primary Earth

Reliability Data

MTBF	> 500,000 hrs. as per Telcordia SR-332
Expected Cap Life Time	10 years (115Vac & 230Vac, 50% load @ 40°C)

Engineering Data

De-rating

Fig. 1.1 De-rating for Vertical Mounting Orientation
 > 50°C de-rate power by 2.5% / °C, > 70°C de-rate power by 4% / °C

Note

1. Power supply components may degrade, or be damaged, when the power supply is continuously used outside the shaded region, refer to the graph shown in Fig. 1.1.
2. If the output capacity is not reduced when the surrounding air temperature >50°C, the device will run into Over Temperature Protection. When activated, the output voltage will go into bouncing mode and will recover when the surrounding air temperature is lowered or the load is reduced as far as necessary to keep the device in working condition.
3. If the device has to be mounted in any other orientation, please do not hesitate to contact info@deltapsu.com for more details.
4. In order for the device to function in the manner intended, it is also necessary to keep a safety distance of 20mm with adjacent units while the device is in operation.
5. Depending on the surrounding air temperature and output load delivered by the power supply, the device housing can be very hot!

CliQ DIN Rail Power Supply

24V 120W 3 Phase / DRP024V120W3AA

Output De-rating VS. Input Voltage

Assembly & Installation

The power supply unit (PSU) can be mounted on 35mm DIN rails in accordance with EN60715. The device should be installed with input terminal block at the bottom.

Each device is delivered ready to install.

Mounting

Fig. 2.1 Mounting

Snap on the DIN rail as shown in Fig. 2.1:

1. Tilt the unit upwards and insert it onto the DIN rail.
2. Push downwards until stopped.
3. Press against the bottom front side for locking.
4. Shake the unit slightly to ensure that it is secured.

Dismounting

Fig. 2.2 Dismounting

To uninstall, pull or slide down the latch with screw driver as shown in Fig. 2.2. Then slide the power supply unit (PSU) in the opposite direction, release the latch and pull out the power supply unit (PSU) from the rail.

CliQ DIN Rail Power Supply

24V 120W 3 Phase / DRP024V120W3AA

Safety Instructions

- ALWAYS switch mains of input power OFF before connecting or disconnecting the input voltage to the unit. If mains are not turned OFF, there is risk of explosion / severe damage.
- **To guarantee sufficient convection cooling, keep a distance of 50mm above and below the device as well as a lateral distance of 20mm to other units.**
- Note that the enclosure of the device can become very hot depending on the surrounding air temperature and load of the power supply. Risk of burns!
- Only plug in and unplug connectors when power is turned off!
- DO NOT insert any objects into the unit.
- Hazardous voltages may be present for up to 5 minutes after the input mains voltage is disconnected. Do not touch the unit during this time.
- The power supplies unit must be installed in an IP54 enclosure or cabinet in the final installation. The enclosure or cabinet must comply with EN60079-0 or EN60079-15.
- The power supplies are built in units and must be installed in a cabinet or room (condensation free environment and indoor location) that is relatively free of conductive contaminants.

Functions

- Graph illustrating the Start-up Time, Rise Time, and Hold-up Time

Start-up Time

The time required for the output voltage to reach 90% of its set value, after the input voltage is applied.

Rise Time

The time required for the output voltage to change from 10% to 90% of its set value.

Hold-up Time

Hold up time is the time when the AC input collapses and output voltage retains regulation for a certain period of time. The time required for the output to reach 95% of its set value, after the input voltage is removed.

CliQ DIN Rail Power Supply

24V 120W 3 Phase / DRP024V120W3AA

Inrush Current

Inrush current is the peak, instantaneous, input current measured; and, occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

Step Load Response

The power supply output voltage will remain within $\pm 5\%$ of its steady state value, when subjected to a step load from 0 to 100% of its rated current.

Overvoltage Protection

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications defined on Page 3 under "Protections".

Surge Load

It is the reserve power available constantly that allows reliable startup of loads with high inrush current. After the output has reached its steady state set value, the power supply can support surge loads of up to 150% of maximum rated load (I_o Max), for a maximum duration of 3 seconds. The maximum allowed rate of load change is 0.1amps per microseconds, and the voltage can vary $\pm 5\%$ from the set value during the duration of the surge load.

Overload & Overcurrent Protections

The power supply's Overload (OLP) and Overcurrent (OCP) Protections will be activated when output current exceeds 150% of I_o (Max load). In such occurrence, the V_o will start to droop and once the power supply has reached its maximum power limit, the protection is activated and the power supply will go into "Hiccup mode" (Auto-Recovery). The power supply will recover once the fault condition of the OLP and OCP is removed and I_o is back within the specifications.

Additionally, if the I_o is $< 150\%$ but $> 100\%$ for a prolong period of time (depending on the load), the Over Temperature Protection (OTP) will be activated due to high temperature on critical components. The power supply will then go into "Hiccup mode" until the fault is removed.

CliQ DIN Rail Power Supply

24V 120W 3 Phase / DRP024V120W3AA

Over Temperature Protection

As mentioned above, the power supply also has Over Temperature Protection (OTP). This is activated when the overload condition persists for an extended duration and the output current is below the overload trigger point but >100% load. In the event of a higher operating condition at 100% load, the power supply will run into OTP when the surrounding air temperature is >80°C. When activated, the output voltage will go into bouncing mode until the operating surrounding air temperature drops to 50°C or output capacity is reduced as recommended in the derating graph.

Short Circuit Protection

The power supply's output OLP/OCF function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode", as shown in the illustration in the OLP/OCF section on this page. The power supply will return to normal operation after the short circuit is removed.

Operating Mode

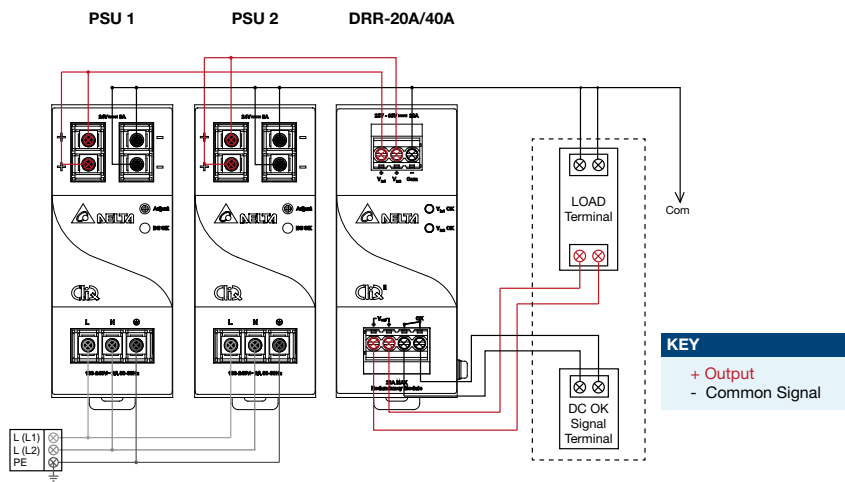

Fig. 3.1 Redundancy / Parallel Operation Connection Diagram

* V_{drop} will vary from 0.60V to 0.90V (Typical 0.65V) depending on the load current and surrounding air temperature.

■ Parallel Operation

These DRR modules can also be used for Parallel function in order to increase the output power by N+1 (e.g. 2.5A + 2.5A = 5A or 2.5A + 2.5A + 2.5A = 7.5A) or current sharing, and thus increasing the power supply and system reliability. Though the DRP024V120W3AA is not designed for current sharing, a good current sharing between two power supplies can be achieved by following simple steps as below (Refer to Fig. 3.1 for the Connection Diagram).

Step 1.
Set output load condition for both supplies at 50% and measure the output voltages.

Step 2.
Adjust output voltages to the same level or within ±25mV difference.

Step 3.
Connect PSU 1 and PSU 2 with the DRR-20A module and measure V_{in1} and V_{in2} to verify the voltage difference. Ensure the voltages are within ±25mV.

Step 4.
Output voltage from DRR module V_{out} will be = V_o (output voltage of power supply) - V_{drop}^* (in DRR module).

* V_{drop} will vary from 0.60V to 0.90V (Typical 0.65V) depending on the load current and surrounding air temperature.

■ Redundancy Operation

In order to ensure proper redundancy operation for the power supply unit (PSU), ensure that the output voltage difference between the two units is kept at 0.45~0.50V for 24V supplies. Follow simple steps given below to verify:

Step 1.
Measure output voltage of PSU 1 and PSU 2. If PSU 1 is the master unit, then V_o of PSU 1 must be higher than PSU 2.

In order to set the output voltage connect the power supply to 50% load and set the PSU 1 and PSU 2 output voltage.

Step 2.
Connect the right DRR module, 20A as per the system requirement to the power supply units PSU 1 and PSU 2 at V_{in1} & V_{in2} respectively.

Step 3.
Connect the system load from V_{out} . Please note that output voltage V_{out} from DRR module will be = V_o (output voltage of power supply) - V_{drop}^* (in DRR module).

24V 120W 3 Phase / DRP024V120W3AA

Others

Delta RoHS Compliant

Restriction of the usage of hazardous substances

The European directive 2011/65/EC limits the maximum impurity level of homogeneous materials such as lead, mercury, cadmium, chrome, polybrominated flame retardants PBB and PBDE for the use in electrical and electronic equipment. RoHS is the abbreviation for "Restriction of the use of certain hazardous substances in electrical and electronic equipment".

This product conforms to this standard.

Conformal Coating

The Protective Coating Technology

Delta Electronics Group has designed the perfect dipping technique which penetrates everywhere including under device, and prevents leakage. The conformal coating dipping can be applied to PCBs or circuit board. The coating preserves the performance of precision electronic primarily by preventing ionizable contaminants such as salt from reaching circuit nodes, where the material slumps around sharp edges. This can be a problem especially in highly conversing atmosphere.
