

# SMT POWER INDUCTORS

## Toroid - Tomcat Series

-  **Height:** 7.6mm Max
-  **Footprint:** 18.2mm x 15.0mm Max
-  **Current Rating:** up to 14.4A
-  **Inductance Range:** 1.5μH to 139μH

#### NOTES:

- The reference inductance is a typical value at the AC and DC excitation listed.
- Temperature rise is 55°C in typical buck or boost circuits at 100kHz and with the reference ET applied to the inductor.
- Total loss in the inductor is 634mW for a 55°C temperature rise above ambient.
- To estimate temperature rise in a given application, determine copper and core losses, divide by 634 and multiply by 50.
- For the copper loss (mW), calculate  $I_{oc}^2 \times R_N$ .
- For core loss (mW), using frequency (f in Hertz) and operating flux density (B in Gauss), calculate  $2.24 \times 10^{-10} \times B^{2.11} \times f^{1.26}$ .
- For flux density (B in Gauss), calculate ET (V-μsec) for the application, divide by ET<sub>100</sub> from the table, and multiply by 100.
- Optional Tape & Reel packaging can be ordered by adding a "T" suffix to the part number (i.e. P0395NL becomes P0395NLT). Pulse complies to industry standard tape and reel specification EIA481.
- The "NL" suffix indicates an RoHS-compliant part number. Non-NL suffixed parts are not necessarily RoHS compliant, but are electrically and mechanically equivalent to NL versions. If a part number does not have the "NL" suffix, but an RoHS compliant version is required, please contact Pulse for availability.
- The temperature of the component (ambient plus temperature rise) must be within the stated operating temperature range.
