

Intellimod™ Module Dual-In-Line Intelligent Power Factor Correction Module 20 Amperes/600 Volts

Description:

DIPPFCT™ is an intelligent power factor correction module that integrates power devices, drivers and protection circuitry in an ultra-compact dual-in-line package. Design time is reduced by the use of application-specific HVIC and a bridge-less topology. Overall efficiency and reliability are increased by use of CSTBT technology and low thermal impedance.

Features:

- Low-loss CSTBT IGBTs
- Single Power Supply
- Efficient bridge-less Topology
- Integrated HVIC

Applications:

- HVAC
- Compressors
- Pumps

Ordering Information:

PS51787 is a 600V, 20 A_{RMS} DIPPFCT™ Module.

*The maximum junction temperature rating of the power chips integrated within the DIPFPC is 150°C ($@T_C \leq 100^\circ\text{C}$). However, to ensure safe operation of the DIPFPC, the average junction temperature should be limited to $T_{j(avg)} \leq 125^\circ\text{C}$ ($@T_C \leq 100^\circ\text{C}$).

Application Circuit

NOTE:

1. Due to high speed and large surge voltage switching, the area P-C1-N should be as small as possible. (C1: good temperature, frequency characteristic electrolytic type). Also add a bypass condenser (C2) with good frequency response such as polypropylene as close as possible to the P and N terminals.
2. To prevent erroneous protection, the wiring of A, B should be as short as possible.
3. It is recommended to insert a high-speed clamp diode between V_{NO}-GND terminals to prevent surge destruction.
4. C3 and C4 capacitors should be mounted as close to the terminals of the DIPFPC as possible. C3, good temperature, frequency characteristic electrolytic type and C4, good temperature, frequency and DC bias characteristic ceramic type are recommended.
5. It is recommended to insert a Zener diode (24V/1W) between each pair of control supply terminals to prevent surge destruction.
6. Please connect adjacent terminals with the same name together on the PCB. (N, N2, V_{NO}, V_{IN}, V_D, S)
7. Do not connect RG and SG terminals to any wire on the PCB.
