

## 1 Cell Li-ion Battery Linear Charger IC with Constant-Current/Constant-Voltage

### ■ GENERAL DESCRIPTION

The XC6801 series is a constant-current/constant-voltage linear charger IC for single cell lithium-ion batteries. The XC6801 includes a reference voltage source, battery voltage monitor, driver transistor, constant-current/constant-voltage charge circuit, overheat protection circuit and phase compensation circuit. The battery charge termination voltage is internally set to  $4.2V \pm 0.7\%$  and the trickle charge voltage and accuracy is  $2.9V \pm 3\%$ . In trickle charge mode, a safe battery charge is possible because approximately only 1/10 of the full charge current is supplied to the battery. As it is possible to select a highly accurate charge current of either 100mA (MAX.) for L level input to the Lim pin or 500mA (MAX.) for H level, the series is ideal for applications where the charge is from USB. The series' charge status output pin, /CHG pin, is capable of checking the IC's charging state via connection to an external LED.

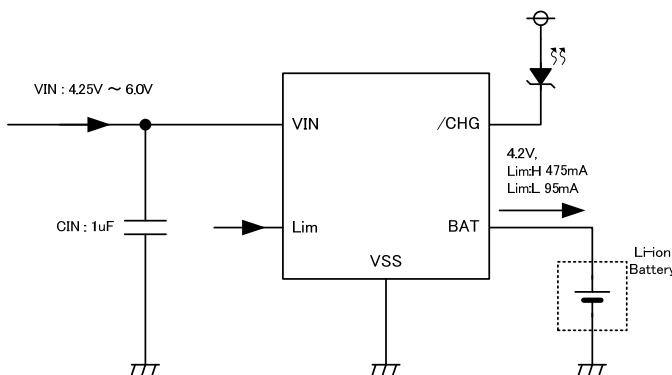

### ■ APPLICATIONS

- USB charge applications
- Charging docks, charging cradles
- MP3 players, portable audio players
- Cellular phones, PDAs
- Bluetooth headsets

### ■ FEATURES

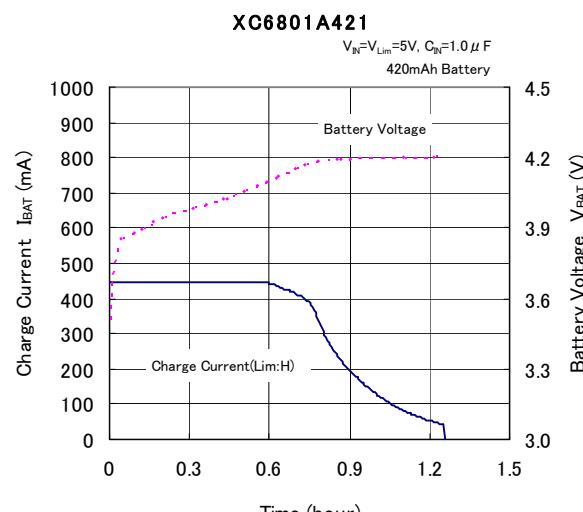

- Operating Voltage Range :  $4.25V \sim 6.0V$
- Charge Current : 100mA (MAX.) @ Lim pin=L  
(externally set) 500mA (MAX.) @ Lim pin=H
- Charge Termination Voltage :  $4.2V \pm 0.7\%$
- Trickle Charge Voltage :  $2.9V \pm 3\%$
- Supply Current (Stand-by) :  $12 \mu A$  (TYP.)
- Operating Ambient Temperature :  $-40^{\circ}C \sim +85^{\circ}C$
- Packages : SOT-89-5, SOT-25, USP-6C
- Constant-current/constant-voltage operation with thermal shutdown
- Automatic recharge
- Charge status output pin
- Soft-start function (Inrush limit current)
- Environmentally Friendly** : EU RoHS Compliant, Pb Free

### ■ TYPICAL APPLICATION CIRCUIT

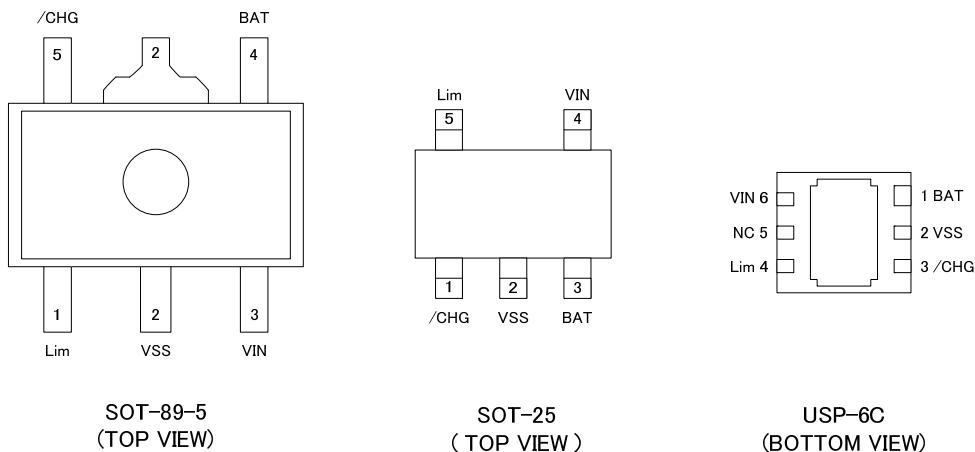

### ■ TYPICAL PERFORMANCE CHARACTERISTICS

#### ● Battery Charge Cycle

## ■ PIN CONFIGURATION

\* The dissipation pad for the USP-6C package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the V<sub>SS</sub> (No. 2) pin.

## ■ PIN ASSIGNMENT

PIN NUMBER			PIN NAME	FUNCTION
SOT-25	SOT-89-5	USP-6C		
1	5	3	/CHG	Charge Status Output Pin
2	2	2	V <sub>SS</sub>	Ground
3	4	1	BAT	Charge Current Pin
4	3	6	V <sub>IN</sub>	Input Voltage Pin
5	1	4	L <sub>IM</sub>	Changing Current Switch
-	-	5	NC	No Connection

## ■ FUNCTIONS

XC6801A421

PIN NAME	CONDITIONS		IC OPERATION
L <sub>IM</sub>	L	0V ≤ V <sub>LIM</sub> ≤ 0.4V	Charging Battery Current 1 (CC Mode)
	H	1V ≤ V <sub>LIM</sub> ≤ 6V	Charging Battery Current 2 (CC Mode)

\*If L<sub>IM</sub> pin is left open, battery current is unstable. L<sub>IM</sub> pin level should be fixed "High" or "Low".

## ■ PRODUCT CLASSIFICATION

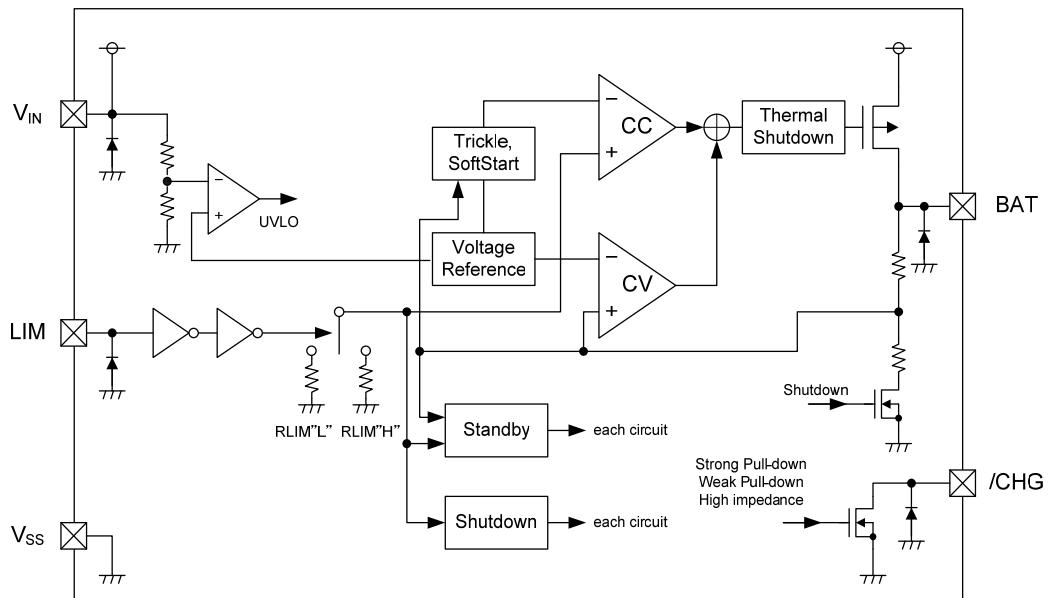

### ● Ordering Information

XC6801A42①②③-④

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	Setting Charge Current	1	L <sub>IM</sub> "L"=95mA, L <sub>IM</sub> "H"=475mA
②③④ <sup>(*)</sup>	Packages (Order Unit)	PR-G	SOT-89-5 (1,000/Reel)
		MR-G	SOT-25 (3,000/Reel)
		ER-G	USP-6C (3,000/Reel)

<sup>(\*)</sup> The "-G" suffix denotes Halogen and Antimony free as well as being fully RoHS compliant.

## ■ BLOCK DIAGRAM

\* Diodes inside the circuits are ESD protection diodes and parasitic diodes.

## ■ ABSOLUTE MAXIMUM RATINGS

T<sub>a</sub>=25°C

PARAMETER	SYMBOL	RATINGS	UNIT
$V_{IN}$ Pin Voltage	$V_{IN}$	-0.3 ~ +6.5	V
$L_{IM}$ Pin Voltage	$V_{LIM}$	-0.3 ~ +6.5	V
BAT Pin Voltage	$V_{BAT}$	-0.3 ~ +6.5	V
/CHG Pin Voltage	$V_{/CHG}$	-0.3 ~ +6.5	V
BAT Pin Current	$I_{BAT}$	900 <sup>(*)1</sup>	mA
Power Dissipation	SOT-25	250	mW
		600 (PCB mounted) <sup>(*)2</sup>	
		500	
		1300 (PCB mounted) <sup>(*)2</sup>	
		120	
		1000 (PCB mounted) <sup>(*)2</sup>	
Operating Ambient Temperature	$T_{op}$	-40 ~ +85	°C
Storage Temperature	$T_{stg}$	-55 ~ +125	°C

All voltages are described based on the  $V_{SS}$  pin.

(\*)1 Please use within the range of  $I_{BAT} \leq P_d / (V_{IN} - V_{BAT})$ .

(\*)2 The power dissipation figure shown is PCB mounted. Please refer to page 16 to 18 for details.

## ■ ELECTRICAL CHARACTERISTICS

Recharge Battery Time	t <sub>RECHRG</sub>	V <sub>BAT</sub> : H → L	0.4	1.7	3.2	ms	⑥
Battery Termination Detect Time	t <sub>TERM</sub>	I <sub>BAT</sub> falling (Less than I <sub>TERM</sub> )	0.3	1.2	2.4	ms	⑥
L <sub>IM</sub> Pin "H" Level Voltage	V <sub>LIM_H</sub>		1			V	③
L <sub>IM</sub> Pin "L" Level Voltage	V <sub>LIM_L</sub>				0.4	V	③
L <sub>IM</sub> Pin "H" Level Current	I <sub>LIM_H</sub>		-0.1		0.1	μA	①
L <sub>IM</sub> Pin "L" Level Current	I <sub>LIM_L</sub>		-0.1		0.1	μA	①
Thermal Shut-Down Detect Temperature	T <sub>TSD</sub>	Junction temperature		120		°C	-
Thermal Shut-Down Release Temperature	T <sub>TSR</sub>	Junction temperature		100		°C	-

Unless otherwise stated, V<sub>IN</sub>=5.0V.

(\*1) The figures under the condition of 0°C≤Ta≤50°C are guaranteed by design calculation.

(\*2) V<sub>RECHRG</sub> is a voltage to start recharging while reducing V<sub>BAT</sub> in stand-by mode from the full charge.

## ■ OPERATIONAL DESCRIPTION

### <Charge Cycle>

If the BAT pin trickle voltage is less than 2.9V(TYP.), the charger enters trickle charge mode. In this mode, a safe battery charge is possible because approximately only 1/10 of the charge current is supplied to the battery. When the BAT pin voltage rises above trickle voltage, the charger enters constant-current mode (CC mode) and the battery is charged by the programmed charge current. When the BAT pin voltage reaches 4.2V, the charger enters constant-voltage mode (CV mode) automatically. After this, the charge current starts to drop and when it reaches a level which is 1/10 of the programmed charge current, the charge terminates.

### <Setting Charge Current>

The charge current can be set from 475mA(TYP.) or 95mA(TYP.) by the L<sub>IM</sub> pin.

L<sub>IM</sub> "H" level input: 475mA(TYP.)

L<sub>IM</sub> "L" level input: 95mA(TYP.)

### <Charge Termination>

The battery charge is terminated when the charge current decreases to 1/10 of the full charging level after the battery pin voltage reaches a float voltage. An internal comparator monitors the I<sub>SEN</sub> pin voltage to detect the charge termination. When the comparator sees that the I<sub>SEN</sub> pin voltage is less than 1.2ms (charge termination detect time), the IC enters stand-by mode. A driver transistor turns off during the stand-by mode.

### <Automatic Recharge>

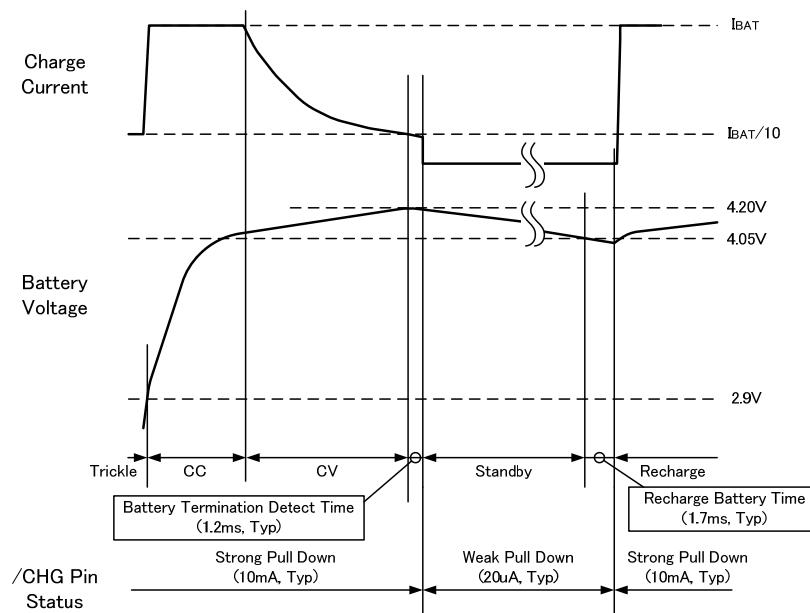

In stand-by mode battery voltage falls. When the voltage level at the battery pin drops to recharge battery threshold voltage 4.05V(TYP.) or less, the charge cycle re-start after a delay of 1.7ms. As such, no external activation control is needed.

## ■OPERATIONAL EXPLANATION (Continued)

### <Charge Condition Status>

The /CHG pin constantly monitors the charge states classified as below:

- Strong pull-down:  $I_{/CHG}=10\text{mA}$  (TYP.) in a charge cycle,
- Weak pull-down:  $I_{/CHG}=20\mu\text{A}$  (TYP.) in a stand-by mode,
- High impedance: in shutdown mode.

### <Connection of Shorted BAT Pin>

Even if the BAT pin is shorted to  $V_{SS}$ , a trickle charge mode operates in order to protect the IC from destruction caused by over current.

### <Under-voltage Lockout (UVLO)>

The UVLO circuit keeps the charger in shut-down mode until the input voltage,  $V_{IN}$ , rises above the UVLO voltage. Moreover, in order to protect the battery charger, the UVLO circuit keeps the charger in shut-down mode when the voltage between the input pin voltage and BAT pin voltage falls to less than 30mV. The charge will not restart until the voltage between the input pin voltage and BAT pin voltage rises more than 100mV. During shut-down mode, the driver transistor turns off but a failure detection circuit operates, and supply current is reduced to  $8\mu\text{A}$ .

### <Soft-Start Function>

To protect against inrush current from the input to the battery, soft-start time is optimized and internally set ( $150\mu\text{s}$ , TYP.).

### <Backflow Prevention Between the BAT Pin and the $V_{IN}$ Pin>

A backflow prevention circuit protects against current flowing from the BAT pin to the  $V_{IN}$  pin even if the BAT pin voltage is higher than the  $V_{IN}$  pin voltage.

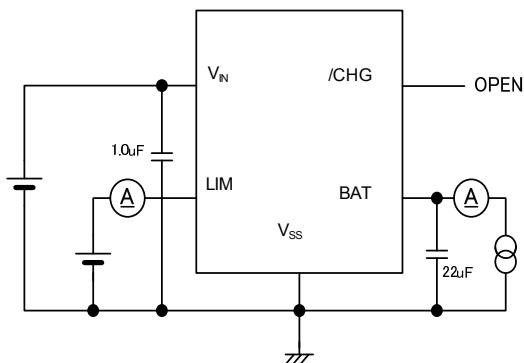

## ■NOTES ON USE

1. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please wire the  $C_{IN}$  as close to the IC as possible.
3. Torex places an importance on improving our products and their reliability.  
We request that users incorporate fail-safe designs and post-aging protection treatment when using Torex products in their systems.

### ● SOT-89-5 Power Dissipation

Power dissipation data for the SOT-89-5 is shown in this page.

The value of power dissipation varies with the mount board conditions.

Please use this data as one of reference data taken in the described condition.

#### 1. Measurement Condition (Reference data)

Condition: Mount on a board

Ambient: Natural convection

Soldering: Lead (Pb) free

Board: Dimensions 40 x 40 mm (1600 mm<sup>2</sup> in one side)

Copper (Cu) traces occupy 50% of the board area

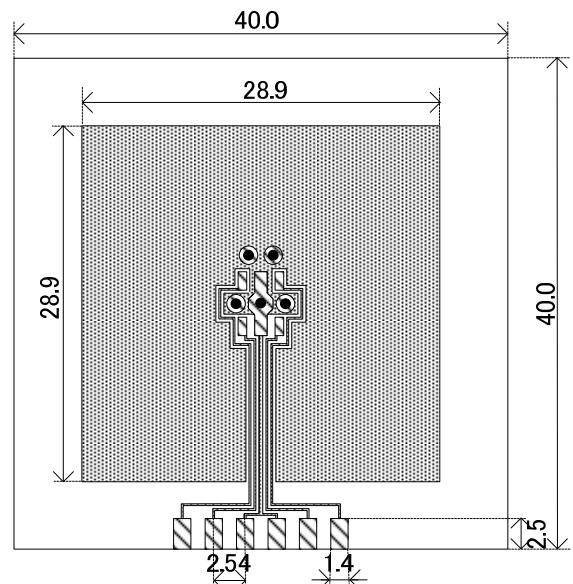

In top and back faces

Package heat-sink is tied to the copper traces

Material: Glass Epoxy (FR-4)

Thickness: 1.6 mm

Through-hole: 5 x 0.8 Diameter

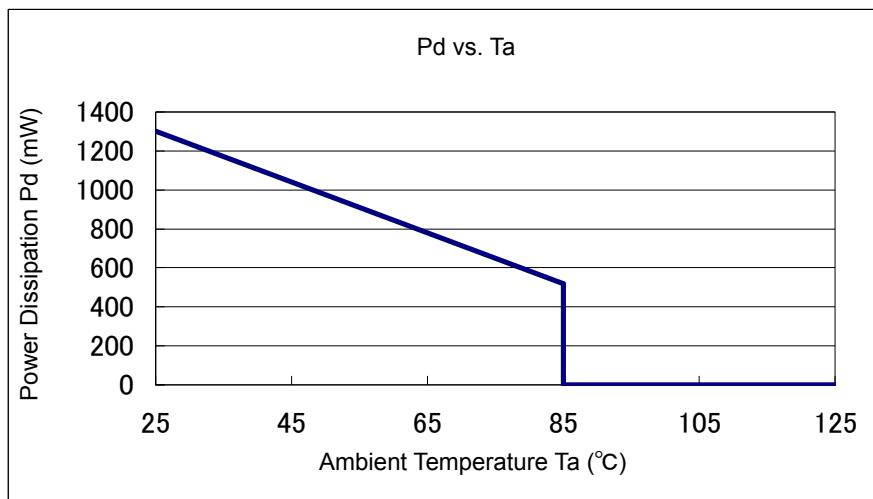

Evaluation Board (Unit: mm)

#### 2. Power Dissipation vs. Ambient Temperature

Board Mount ( $T_j$  max = 125°C)

Ambient Temperature (°C)	Power Dissipation Pd(mW)	Thermal Resistance (°C/W)
25	1300	76.92
85	520
