

Specification

Acrich2 – 17W

SMJD-2V16W2P3 (120V)

SMJD-3V16W2P3 (220V)

Acrich2 - 17W

(120V)

(220V)

Description

The Acrich2 series of products are designed to be driven directly off of AC line voltage, therefore they do not need the standard converter essential for conventional general lighting products.

The converter or driver found in most general lighting products can limit the overall life of the product, but with the Acrich2 series of products the life of the product can more closely be estimated from the LED itself.

This will also allow for a much smaller form factor from an overall fixture design allowing for higher creativity in the fixture.

The modules have a high power factor which can contribute to a higher energy savings in the end application.

Acrich2

Features

- Connects directly to AC line voltage
- High Power Efficiency
- High Power Factor
- Low THD
- Long Life Time
- Simple BOM
- Miniaturization
- Lead Free product
- RoHS compliant

Applications

- Down light
- Factory Ceiling light
- Industrial Light
- Flush mount

1. Characteristics

1-1. Electro-Optical characteristics of Acrich2 17W

Parameter	Symbol	Mark	Value			Unit
			Min	Typ	Max	
Luminous Flux [2]	Φ_v [3]	17a	1140	1300	1480	lm
		17b	1480	1590	1700	
		17c	1700	1780	-	
Correlated Color Temperature [4]	CCT	B	5300	5600	6000	K
		C	4700	5000	5300	
		E	3700	4000	4200	
		G	2900	3000	3200	
		H	2600	2700	2900	
CRI	R_a		80	-	-	-
Operating Voltage [5]	V_{opt}			120		V[RMS]
				220		
Power Dissipation	P_D		16.0	17.0	18.0	W
Operating Frequency	Freq			50 / 60		Hz
Power Factor	PF			Over 0.95		-
View Angle	2θ 1/2			120		deg.
Tolerance of Surge [6]	V_s		500	-	-	V

1-2. Absolute Maximum Ratings

Parameter	Symbol	Raged Voltage	Value	Unit
Max. Voltage	V_{opt}	120V	140	V[RMS]
		220V	264	
Power Dissipation	P_d		23.0	W
Operating Temperature	T_{opr}		-30 ~ 85	°C
Storage Temperature	T_{stg}		-40 ~ 100	°C
ESD Sensitivity	-		±4,000V HBM	-

*** Notes :**

- [1] At 120V and 220V RMS, Ta=25℃
- [2] Acrich2 series maintain the tolerance of ±10% on flux and power measurements.
- [3] Φ_v is the total luminous flux output measured with an integrated sphere.
- [4] Correlated Color Temperature is derived from the CIE 1931 Chromaticity diagram.
- [5] Operating Voltage doesn't indicate the maximum voltage which customers use but means tolerable voltage according to each country's voltage variation rate.
It is recommended that the solder pad temperature should be below 70℃.
- [6] It means surge voltage of product that can withstand. Surge value followed by the standard of IEC61000-4-5.

2. Thermal Resistance

Part	Package Power Dissipation [W]	Maximum Junction Temp[°C]	R θ_{j-s} [°C/W]
Acrich2 LED	SAW8KG0B Max 0.5	125	27
Acrich2 IC	Max 1.0	125	16.4

The Acrich2 LED has a thermal resistance of 27°C/W from junction of the LED to the LED lead.

The maximum junction temperature of the Acrich2 LED package is 125°C, therefore the maximum lead temperature T_{s_max} is

$$T_{s_max} = T_{j_max} - (R\theta_{j-s} * P_D)$$

$$= 125^\circ\text{C} - (27^\circ\text{C/W} * 0.5\text{W}) = 111.5^\circ\text{C}$$

Although this is the maximum lead temperature, it is recommended to keep the lead temperature under 70°C

The Acrich2 IC has a 16.4°C/W thermal resistance from junction to the top surface.

The maximum junction temperature (T_{t_max}) of the IC is 125°C, therefore the maximum temperature of the top of the IC is

$$T_{t_max} = T_{j_max} - (\psi_{j-t} * P_D)$$

$$= 125^\circ\text{C} - (16.4^\circ\text{C/W} * 1.0\text{W}) = 108.6^\circ\text{C}$$

3. Color spectrum

Relative Spectral Distribution vs. Wavelength Characteristic – G, H

Relative Spectral Distribution vs. Wavelength Characteristic - E

Relative Spectral Distribution vs. Wavelength Characteristic – B, C

4. Power characteristic

Relative Power Distribution vs. Voltage at Ta=25°C

Relative Luminous flux vs. Voltage at Ta=25°C

5. Radiation Pattern

6. Binning Structure

Bin code	X	Y	Bin code	X	Y	Bin code	X	Y
B	0.3253	0.3425	C	0.3415	0.3568	E	0.3778	0.3815
	0.3255	0.3350		0.3409	0.3483		0.3753	0.3714
	0.3331	0.3418		0.3487	0.3546		0.3874	0.3788
	0.3333	0.3498		0.3498	0.3635		0.3906	0.3895
G	0.4311	0.4071	H	0.4560	0.4152			
	0.4258	0.3952		0.4494	0.4029			
	0.4377	0.3994		0.4609	0.4056			
	0.4437	0.4116		0.4680	0.4180			

7. Marking

• 13 Digits(including Blank)

130109 17a G 2 3
 ① ② ③④⑤

- ① SMT Date(6 Digits) – ex)130109
- ② Flux(3 Digits)
- ③ CCT(1 Digit)
- ④ CCT Combination No.(1 Digit)
- ⑤ Vf Combination No.(1 Digit)

* Marking is based on SMJD-2V16W2P3

② Flux

Marking	Flux[lm]		
	Min	Typ	Max
17a	1140	1300	1480
17b	1480	1590	1700
17c	1700	1780	-

③ CCT

Marking	CCT[K]		
	Min	Typ	Max
B	5300	5600	6000
C	4700	5000	5300
E	3700	4000	4200
G	2900	3000	3200
H	2600	2700	2900

④ CCT Combination No.

Marking	Bin 1	Bin 2
1	0	5
2	5	0
3	1	4
4	4	1
5	2	3
6	3	2

⑤ Vf Combination No.

Marking	Bin 1	Bin 2
1	A	A
2	A	B
3	B	A
4	A	C
5	C	A
6	B	B
7	B	C
8	C	B
9	C	C

8. Part List

No.	Part	Silk	Specification	Q'ty
1	PCB	-	Metal(Al) Φ100 1.6T	1
2	LED	-	SAW8KG0B	42
3	Fuse	F1	250V 1A	1
4	Varistor	V1	330V DC/250V AC	1
5	Bridge Diode	BD1	MB6S	1
6	Resistor	R1	6432size 91Ω 5%	1
7	Resistor	R2		1
8	TVS	Z1	440V 600W UNI 5%	1
9	IC	U1	DT3001B	1
10	Resistor	R3	1608size 4.32KΩ 1%(120V)	1
			1608size 1.74KΩ 1%(220V)	
11	Resistor	R4	1608size 1KΩ 5%	1
12	Resistor	R5	3216size 0Ω (220V)	1

9. Outline dimensions

* Notes :

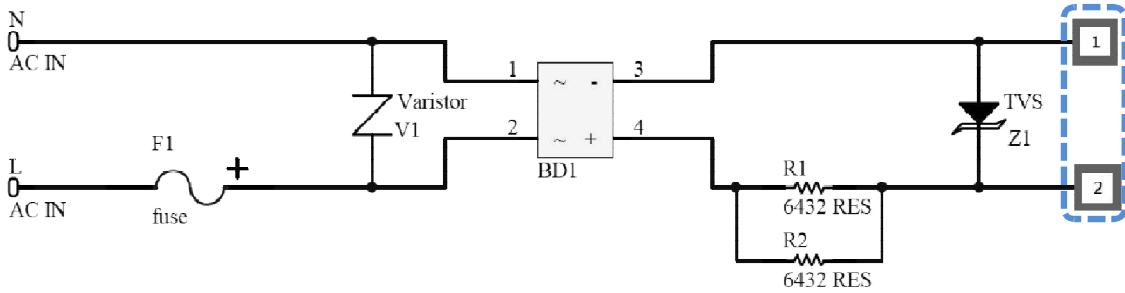

[1] All dimensions are in millimeters. (Tolerance : ±0.2)

[2] Dimensions are based on SMJD-3V16W2P3

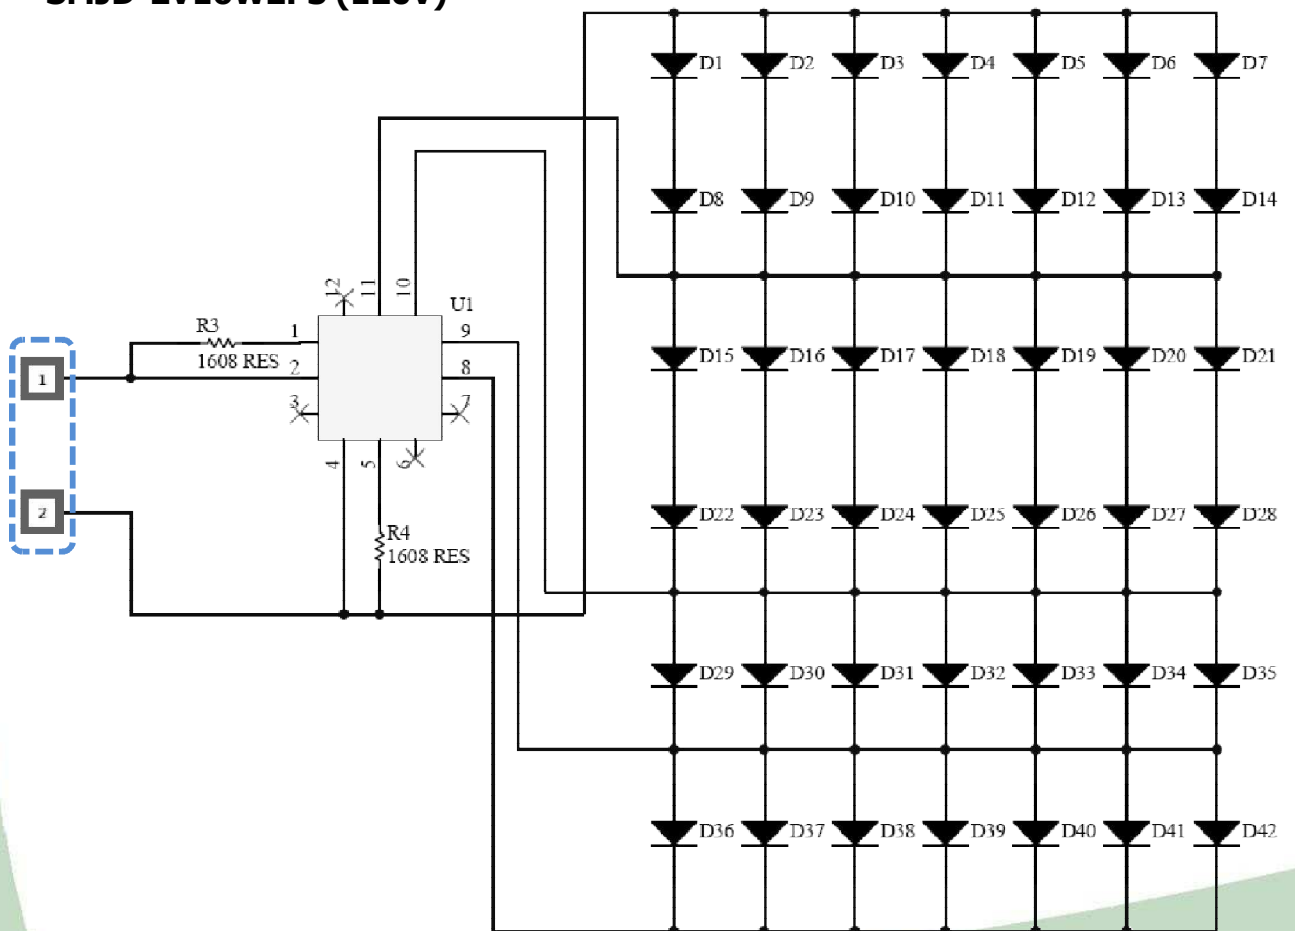

[3] Scale : none

10. Circuit Drawing

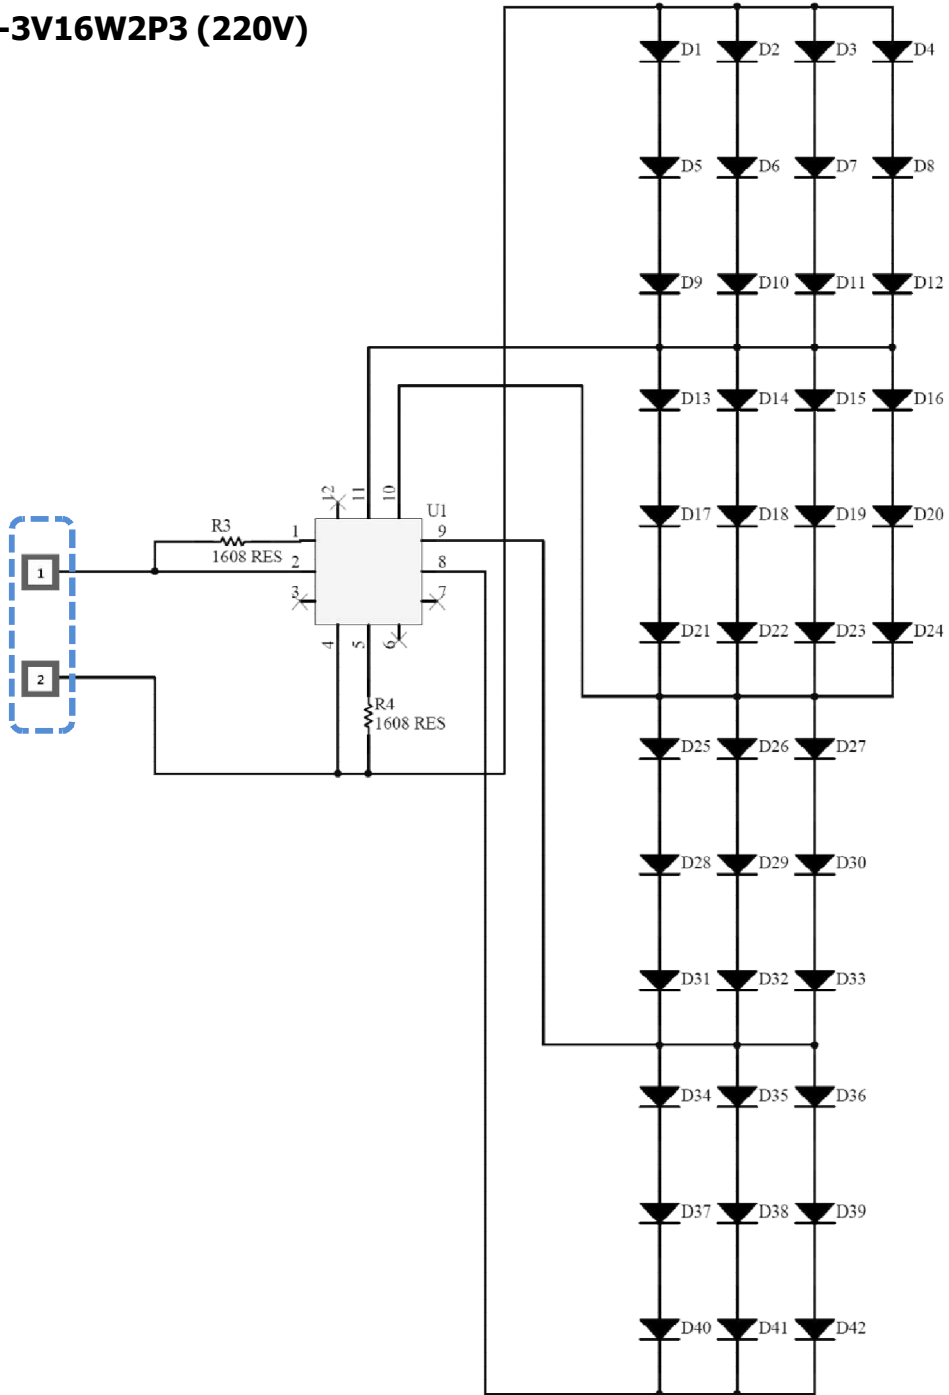

Surge Protection Circuit (SPC)

SMJD-2V16W2P3 (120V)

SMJD-3V16W2P3 (220V)

11. Packing

◦ **1Box : 8 PCS per tray x Max 20 layer = Max 160 PCS (about 6.5kg)**

◦ **Box size(L x W x H) = 515 x 393 x 242**

12. Cautions for use

- Please review the Acrich2 Application Note for proper protective circuitry usage
- Please note, Acrich2 products run off of high voltage, therefore caution should be taken when working near Acrich2 products.
- DO NOT touch any of the circuit board, components or terminals with body or metal while circuit is active.
- Please do not add or change wires while Acrich2 circuit is active
- Long time exposure to sunlight or UV can cause the lens to discolor.
- Please do not use adhesives to attach the LED that outgas organic vapor.
- Please do not use together with the materials containing Sulfur.
- Please do not assemble in conditions of high moisture and/or oxidizing gas such as Cl, H₂S, NH₃, SO₂, NO_x, etc.
- Please do not make any modification on module.
- Please be cautious when soldering to board so as not to create a short between different trace patterns.

13. Handling of silicone resin for LEDs

- Acrich2 series is encapsulated with silicone resin for high optical efficiency.
- Please do not touch the silicone resin area with sharp objects such as pincette(tweezers).
- Finger prints on silicone resin area may affect the performance.
- Please store LEDs in covered containers to prevent dust accumulation as this may affect performance.
- Excessive force more than 3000gf to the silicone lens can result in fatal or permanent damage with LEDs.
- Please do not cover the silicone resin area with any other resins such as epoxy, urethane, etc.

14. Handling with regards to static electricity

- The Acrich2 products use an integrated circuit (IC) which can be damaged when exposed to static electricity. Please handle using equipment that prevents static electricity. Do not touch unless ESD protection is used.
- The Acrich2 product should also not be installed in end equipment without ESD protection.

15. Storage before use

- Do not impact or place pressure on this product because even a small amount of pressure can damage the product. The product should also not be placed in high temperatures, high humidity or direct sunlight since the device is sensitive to these conditions.
- When storing devices for a long period of time before usage, please following these guidelines:
 - * The devices should be stored in the anti-static bag that it was shipped in from Seoul-Semiconductor with opening.
 - * If the anti-static bag has been opened, re-seal preventing air and moisture from being present in the bag.

16. Guidelines for properly working with Acrich2

- Discharge the lighting system a minimum of 2-3 times prior to working with the module.
- Use only properly rated test equipment and tools for the rated voltage and current of the product being tested.
- It is strongly suggested to wear rubber insulated gloves and rubber bottom shoes.
- Do not wear any conductive items (such as jewelry) which could accidentally contact electric circuits.
- Perform several tests with power off and the lighting system unplugged.
- Faults, lightning, or switching transients can cause voltage surges in excess of the normal ratings.
- Internal component failure can cause excessive voltages.
- Stored or residual electricity in long wire could be hazardous.
- Make sure proper discharge prior to starting work.
