

Door Interlock Switch D2D

Power Switch with Minimum Contact Gap up to 3 mm.

- Minimum contact gap of 3 mm (standard models), needed in general power switches, is provided.
- Mechanism with double return spring and direct drive positive contact opening features
- Pull-on lock type for easy maintenance is also available.
- Conforms to Class II of VDE Insulation Grade.
- RoHS Compliant

■ Ratings (Reference values)

Type	Voltage	Resistive load		Motor load	
		NC	NO	NC	NO
Standard	125 VAC 250 VAC	16 A		4 A	
Pull-on lock	125 VAC 250 VAC	10 A		---	

- Note:** 1. The above values are for steady-state current and the motor load has an inrush current of 6 times the steady-state current.
2. The ratings apply under the following test conditions: Ambient Temperature = 20±2°C, Ambient Humidity = 65±5%, Operating frequency = 30 operations/min.

■ Approved Standards

■ Contact Specifications

Item	Standard model	Pull-on lock model
Specification	Rivet	
Material	Silver	
Gap (standard value)	3 mm min.	1 mm
Inrush current	30 A max.	24 A max.
Minimum applicable load (see note)	160 mA at 5 VDC	

Note: Minimum applicable loads are indicated by N standard reference values. This value represents the failure rate at a 60% (λ_{60}) reliability level (JIS C5003).
The equation $\lambda_{60}=0.5 \times 10^{-6} / \text{operations}$ indicates that a failure rate of 1/2,000,000 operations can be expected at a reliability level of 60%

Mounting Holes

Screw mount switches may be panel mounted using M4 mounting screws with plane washers or spring washers to securely mount the switch. Tighten the screws to a torque of 0.49 to 0.69 N·m

Panel Mount Holes

Panel Cutout Dimensions

Panel thickness: 1.0 to 2.5 mm

Note: Dimension is 36.7±0.1 with a panel thickness of 1.0 mm and 37.0±0.1 with a panel thickness of 2.5 mm

Screw mount type panel

Panel mount type panel

Snap-fit panel mount switches use the panel cutout hole illustrated above. When mounting on a metal surface, be sure to provide a separator between the switch and mounting plate.

Pull-on Lock Function

When opening or closing the door, the power ON state of the switch can be checked with the door left open. By closing the door after maintenance inspection, the switch will resume the normal momentary action. (this feature is ideal for conducting the electrical continuity test, inspection, repair, etc. of the switch after its assembly.)

Example		To turn ON the power when the door is closed	To turn OFF the power when the door is open	To turn ON the power with the door left open
Connection	NO-NO	ON	OFF	ON
	NC-NC	OFF	ON	OFF

■ Safety Features

Double Spring Mechanism

Two return springs are provided for the pin plunger. Thus, if either of the springs are broken, this feature will prevent the switch from malfunctioning or short-circuiting.

(Applicable to D2D-1000 and D2D-3000 models. The D2D-2000 models with pull-on lock is not provided with this feature.)

Direct Contact Opening Mechanism

The insulating ring, identified by , will positively break the circuit if a contact weld occurs in the switch. (D2D-1000 models).

The section marked  pushes the movable contact to apply force in the direction which separates the movable contact forcibly from the fixed contact.

Precautions

Be sure to read the precautions and information common to all Snap Action and Detection Switches, contained in the Technical User's Guide, "Snap Action Switches, Technical Information" for correct use.

■ Correct Use

Actuation

Apply operation force to the pin plunger in the direction it operates. Applying forces laterally or from an oblique direction may damage the pin plunger.

Using Microloads

Using a model for ordinary loads to switch microloads may result in faulty operation. Instead, use the models that are designed for microloads and that operate in the following range;

However, even when using microload models within the operating range shown above, if inrush current or inductive voltage spikes occur when the contact is opened or closed, then contact wear may increase and so decrease the service life. Therefore, insert a contact protection circuit where necessary.
