Remark C_L includes probe and stray wiring capacitance.

***4. Test circuit for common mode transient immunity**

Remark C_L includes probe and stray wiring capacitance.

USAGE CAUTIONS

1. This product is weak for static electricity by designed with high-speed integrated circuit so protect against static electricity when handling.
2. By-pass capacitor of more than $0.1 \mu F$ is used between V_{CC} and GND near device. Also, ensure that the distance between the leads of the photocoupler and capacitor is no more than 10 mm.
3. Pin 2 (which is an NC*1 pin) can either be connected directly to the GND pin on the LED side or left open.
 Unconnected pins should not be used as a bypass for signals or for any other similar purpose because this may degrade the internal noise environment of the device.
 Note: *1. NC: Non-Connection (No Connection).
4. Avoid storage at a high temperature and high humidity.
