

RF Hardened, Ultralow Noise Microphone with Bottom Port and Analog Output

GENERAL DESCRIPTION

The ADMP510* is an RF hardened, analog output, bottom-ported, omnidirectional MEMS microphone with high performance, ultralow noise, and low power. The ADMP510 consists of a MEMS microphone element, an impedance converter, and an output amplifier. The ADMP510 sensitivity specification makes it an excellent choice for both near-field and far-field applications. The ADMP510 is pin compatible with the ADMP504 microphone. The ADMP510 has a very high signal-to-noise ratio (SNR) and extended wideband frequency response, resulting in natural sound with high intelligibility. Low current consumption enables long battery life for portable applications.

The ADMP510 is available in a miniature 3.35 × 2.5 × 0.98 mm surface-mount package. It is reflow solder compatible with no sensitivity degradation.

*Protected by U.S. Patents 7,449,356; 7,825,484; 7,885,423; and 7,961,897. Other patents are pending.

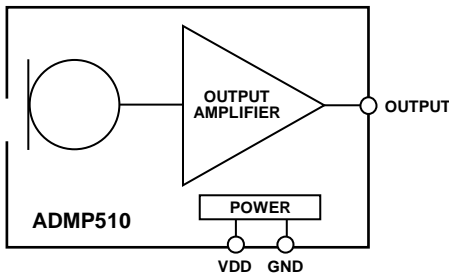

APPLICATIONS

- Smartphones and Feature Phones
- Tablet Computers
- Teleconferencing Systems
- Digital Still and Video Cameras
- Bluetooth Headsets
- Notebook PCs
- Security and Surveillance

FEATURES

- Tiny, 3.35 × 2.5 × 0.98 mm Surface-Mount Package
- High SNR of 65 dB
- Acoustic Overload Point of 124 dB SPL
- Extended Frequency Response from 60 Hz to 20 kHz
- Omnidirectional Response
- Sensitivity of -38 dBV
- Sensitivity Tolerance of ±2 dB
- Enhanced Radio Frequency (RF) Performance
- Low Current Consumption of 180 μA
- Single-Ended Analog Output
- High PSR of -78 dBV
- Compatible with Sn/Pb and Pb-Free Solder Processes
- RoHS/WEEE Compliant

SPECIFICATIONS

TABLE 1. ELECTRICAL CHARACTERISTICS

($T_A = -40$ to 85°C , $V_{DD} = 1.5$ to 3.63 V, unless otherwise noted. All minimum and maximum specifications are guaranteed across temperature and voltage, and are specified in Table 1, unless otherwise noted. Typical specifications are not guaranteed.)

PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS	NOTES
PERFORMANCE						
Directionality			Omni			
Sensitivity	1 kHz, 94 dB SPL	-40	-38	-36	dBV	
Signal-to-Noise Ratio (SNR)			65		dB	
Equivalent Input Noise (EIN)			29		dB SPL	
Dynamic Range	Derived from EIN and maximum acoustic input		91		dB	
Frequency Response	Low frequency -3 dB point		60		Hz	1
	High frequency -3 dB point		>20		kHz	
Total Harmonic Distortion (THD)	105 dB SPL		0.2	1	%	
Power-Supply Rejection (PSR)	217 Hz, 100 mVp-p square wave superimposed on $V_{DD} = 1.8$ V (A-weighted)		-78		dB	
Power-Supply Rejection Ratio (PSRR)	1 kHz, 100 mV p-p sine wave superimposed on $V_{DD} = 1.8$ V		-55		dB	
Acoustic Overload Point	10% THD		124		dB SPL	
POWER SUPPLY						
Supply Voltage (V_{DD})		1.5		3.63	V	
Supply Current (I_S)						
	$V_{DD} = 1.8$ V		180	220	μA	
	$V_{DD} = 3.3$ V		210	250	μA	
OUTPUT CHARACTERISTICS						
Output Impedance (Z_{OUT})			350		Ω	
Output DC Offset			0.7		V	
Maximum Output Voltage	131 dB SPL input		0.398		V rms	
Noise Floor	20 Hz to 20 kHz, A-weighted, rms		-103		dBV	

Note 1: See Figures 3 and 5.

ABSOLUTE MAXIMUM RATINGS

Stress above those listed as Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these conditions is not implied. Exposure to the absolute maximum ratings conditions for extended periods may affect device reliability.

TABLE 2. ABSOLUTE MAXIMUM RATINGS

PARAMETER	RATING
Supply Voltage (VDD)	-0.3 V to +3.63 V
Sound Pressure Level	160 dB
Mechanical Shock	10,000 g
Vibration	Per MIL-STD-883 Method 2007, Test Condition B
Operating Temperature Range	-40°C to +85°C
Storage Temperature Range	-55°C to +150°C

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

SOLDERING PROFILE

APPLICATIONS INFORMATION

INTERFACING WITH ANALOG DEVICES CODECS

The output of the ADMP510 can be connected to a dedicated codec microphone input (see Figure 9) or to a high input impedance gain stage (see Figure 10). A 0.1 μF ceramic capacitor placed close to the ADMP510 supply pin is used for testing and is recommended to adequately decouple the microphone from noise on the power supply. A DC blocking capacitor is required at the output of the microphone. This capacitor creates a high-pass filter with a corner frequency at

$$f_c = 1/(2\pi \times C \times R)$$

where R is the input impedance of the codec.

A minimum value of 2.2 μF is recommended in Figure 9 because the input impedance of codecs can be as low as 2 k Ω at their highest PGA gain setting, which results in a high-pass filter corner frequency at 37 Hz. Figure 10 shows the ADMP510 connected to an op amp configured as a noninverting preamplifier.

PCB DESIGN AND LAND PATTERN LAYOUT

The recommended PCB land pattern for the ADMP504 should be laid out to a 1:1 ratio to the solder pads on the microphone package, as shown in Figure 8. Take care to avoid applying solder paste to the sound hole in the PCB. A suggested solder paste stencil pattern layout is shown in Figure 9. The diameter of the sound hole in the PCB should be larger than the diameter of the sound port of the microphone. A minimum diameter of 0.5 mm is recommended.

HANDLING INSTRUCTIONS

PICK AND PLACE EQUIPMENT

The MEMS microphone can be handled using standard pick-and-place and chip shooting equipment. Take care to avoid damage to the MEMS microphone structure as follows:

- Use a standard pickup tool to handle the microphone. Because the microphone hole is on the bottom of the package, the pickup tool can make contact with any part of the lid surface.
- Do not pick up the microphone with a vacuum tool that makes contact with the bottom side of the microphone. Do not pull air out of or blow air into the microphone port.
- Do not use excessive force to place the microphone on the PCB.

REFLOW SOLDER

For best results, the soldering profile must be in accordance with the recommendations of the manufacturer of the solder paste used to attach the MEMS microphone to the PCB. It is recommended that the solder reflow profile not exceed the limit conditions specified in Figure 1 and Table 3.

BOARD WASH

When washing the PCB, ensure that water does not make contact with the microphone port. Do not use blow-off procedures or ultrasonic cleaning.
