GT3A Series — Analog Timers

Key features:

- 4 selectable operation modes on each model
- External start, reset, and gate inputs
- Panel mount or socket mount
- Large variety of timing functions
- Power and output status indicating LEDs

Specifications

	GT3A-1	GT3A-2	GT3A-3	GT3A-4,-5,-6								
Operation		Multi-mode		Multi-mode with inputs (11 pins)								
Time Range		0.1s to 1	80 hours									
Rated Voltage		12\	AC, 50/60Hz / DC 60Hz / 24V DC									
Contact Ratings		50V AC, 3A; resistive load)	125V AC/29 30V DC, 5A (r	50V AC, 5A; resistive load)								
Minimum Applicable Load		5V, 10mA (re	ference value)									
Voltage Tolerance		AD24: 20.4 to 26.4V): 85 to 264V AC AC/21.6 to 26.4V DC to 13.2V DC									
Error		±0.2%, ±10 msec (repeat, voltage, temperature)										
Setting Error		±10% maximum										
Reset Time		60msec	maximum									
Insulation Resistance		100MW minimum										
Dielectric Strength		Between power and output terminals: 2,000V AC, 1 minute Between contacts of different poles: 2,000V AC, 1 minute Between contacts of the same pole: 750V AC, 1 minute										
	Delayed SPDT	Delayed SPDT + instantaneous SPDT	Delayed DPDT	Delayed DPDT								
Power Consumption (approximate)	10.8VA (200V AC, 60Hz)	13.5VA (200V AC, 60Hz)	14.4VA (200V AC, 60Hz)	4.7VA (100V AC, 60Hz), 14.4VA (200V AC, 60Hz)								
(upproximate)	_	12VDC/1W 24VDC/0.7W 24VAC/1.2VA	12VDC/1.1W 24VDC/0.6W 24VAC/1.3VA	12VDC/0.8W 24VDC/0.6W 24VAC/1.3VA								
Mechanical Life	10,000,000 ope	rations minimum	5,000,000 oper	ations minimum								
Electrical LIfe	50,000 operations r	minimum (rated load)	100,000 operations r	minimum (rated load)								
Weight (approximate)	63g	73g	79g	80g								
Vibration Resistance		100m/sec ² (ap	proximate 10G)									
Shock Resistance		Operating extremes: 100m/sec² (approximate 10G) Damage limits: 500m/sec² (approximate 50G)										
Operating Temperature		−10 to	+50°C									
Operating Humidity		45 to 8	85% RH									
Storage Temperature		−30 to)+80°C									
Housing Color		Gi	ray

	108 minutes	to 180 hours	0-18		
Step 3.				Selection	
Set the precise period of time	e desired by usi	ng the @ Setting Knob.			

GT3F Series – True Power OFF Delay Timers

Key features:

- "True" power OFF-delay up to 10 minutes
- No external control switch necessary
- Available with reset inputs
- Mountable in sockets or flush panel

Specifications

	GT3F-1	GT3F-2				
Operation	True power	r OFF-delay				
Time Range	0.1 seconds to 600 seconds					
Rated Voltage		AC, 50/60Hz AC/DC				
Contact Rating	250V AC/30V DC, 5A (resistive load)	250V AC/30V DC, 3A (resistive load)				
Contact Form	SPDT	DPDT				
Minimum Power Application Time	1 se	cond				
Voltage Tolerance		to 240V AC DC, 20.4 to 26.4VAC				
Repeat Error	±0.2%, ±	±10 msec				
Voltage Error	±0.2%, ±	-10 msec				
Temperature Error	±0.2%, ±	-10 msec				
Setting Error	±10% m	naximum				
Insulation Resistance	100MW minimum					
Dielectric Strength	2,000V AC, 1 1,500V AC, 1 Between contacts 1,000V AC, 1 Between contacts	d output terminals: minute (SPDT) minute (DPDT) on different poles: minute (DPDT) of the same pole: 1 minute				
Power Consumption		200V AC, 60Hz) DC), 1.2VA (AC)				
Mechanical Life	20,000,000 oper	rations minimum				
Electrical Life	100,000 opera	tions minimum				
Vibration Resistance	100m/sec ² (app	proximate 10G)				
Shock Resistance	Operating extremes: 100 m/sec ² (approximate 10G) Damage limits: 500 m/sec ² (approximate 50G)					
Operating Temperature	−10 to +50°C					
Storage Temperature	−30 to +80°C					
Operating Humidity	45 to 85% RH					
Weight (approximate)	77g	79g				

An inrush current flows during the minimum power application time. AF20: approximate 0.4A, AD24: approximate 1.2A

GT3F does not read the preset time range shown on the knob after power is turned off. Note that minimizing
the preset time, by turning the knob to zero, does not shorten the delay time after power is removed.

Part Numbering List

GT3F

Mode of	Rated	Time Denge	Outnut	Contont	Ontional Innut	Complete Part Number		
Operation	Voltage Code	Time Range	Output	Contact	Optional Input	8-Pin	11-Pin	
	AF20: 100 to		250V AC, 5A,	Delayed SPDT	Reset	GT3F-1AF20	GT3F-1EAF20

11-Pin Type

Item	Terminal	Number				Operatio	n		
Power	2 -	10		l		I			
Reset Input	6 - 7 (11p)	ON or L							
Delayed	1 - 4 8 - 11	(NC)							
Contact	1 - 3 9 - 11	(NO)							
Indicator	POWER								
Set Time			Tr Tr	←	-	√ Ta		ļ⊷ļ Ts	←

When power is applied, the NO contact closes. When power is removed, the timing period begins. When time has elapsed, the NO contact opens. Optional reset input will return contacts to original state before time elapses.

A T

T = Set time

Ta = Shorter than set time

Ts = 1 Second

Tr = Minimum Power Application Time

GT3F-1: 1 Second

Item	Terminal	Number	Operation								
Power	2 -	10

Set Time			↓ T r	← →	-		√ →			 Ts	←

Instructions: Setting GT3F Series Timers

Timers

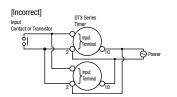

Step 1	Desired Operation	S	election	Remarks				
	Base Time Ranges	① Dial Selector	② Time Range Selector					
	0.1s to 1s	0 to 1						
	0.1s to 3s	0 to 3	1s					
Select a time range that	0.1s to 6s	0 to 6		Time range can be selected from 1S and 10S using a flat screwdriver and five				
contains the	0.1s to 10s	0 to 1		different dials of 0 to 1, 0 to 3, 0 to 6, 0 to 18, and 0 to 60 are displayed in the six windows by turning the Dial Selector, allowing for selecting the best suited scale.				
desired period of time.	0.3s to 30	0 to 3		Note that the switch does not turn infinitely.				
or time.	0.6s to 60	0 to 6	10s					
	1.8s to 180s	0 to 18						
	6s to 600s	0 to 60						
		Step 2		Remarks				
The set time is s	elected by turning the ③ Set	ting Knob.		Setting Examples: 1. When the Setting Knob ③ is set at 2.5, with Dial Selector ① 0 to 3 and Time Range Selector ② 1S selected, then the set time is 2.5 seconds. 2. When the Setting Knob ③ is set at 5.0, with Dial Selector ① 0 to 60 and Time Range Selector ② 10S selected, then the set time is 500 seconds.				

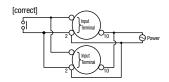

Instructions: Wiring Inputs

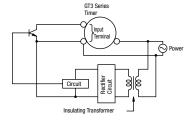

Inputs of GT3F

To avoid electric shock, do not touch the input signal terminal during power voltage application. Never apply the input signals to two or more GT3F timers using the same contact or transistor.

In a transistor circuit for controlling input signals, with its primary and secondary power circuits isolated, do not ground the secondary circuit.

On the GT3F timers, connect the input signals to terminal No.1 and 4 only on the 8-pin type; connect the input signals to terminal No. 6 and 7 only on the 11-pin type. Never apply voltage to other terminals; otherwise, the internal circuit may be damaged.

Input signal lines must be made as short as possible and installed away from power cables and power lines. Use shielded wires or a separate conduit for input wiring.

The GT3F, consisting of a high-impedance circuit, may not be reset due to the influence of an inductive voltage or residual voltage caused by a leakage current. If not reset, connect an RC filter or bleeder resistor between power terminals so that the voltage between power terminals can be reduced to less than 15% of the rated voltage.

GT3W Series — **Dual Time Range Timers**

Key features:

- Sequential start, sequential interval, on-delay, recycler, and interval ON timing functions
- 2 time settings in one timer
- 8 selectable operation modes on each model
- Mountable in sockets or flush panel
- Power and output status indicating LEDs
- Time ranges up to 300 hours

UL, c-UL Listed File No. E55996

Instructions: Setting GT3W Timer

- The switches should be securely turned using a flat screwdriver 4mm wide (maximum). Note that incorrect setting may cause malfunction.
 The switches, which do not turn infinitely, should not be turned beyond their limits.
- Since changing the setting during timer operation my cause malfunction, turn power off before changing.

Safety Precautions

Special expertise is required to use Electronic Timers.

- All Electronic Timer modules are manufactured under IDEC's rigorous quality control system, but users must add a backup or fail safe provision to the control system when using the Electronic Timer in applications where heavy damage or personal injury may occur should the Electronic Timer fail.
- Install the Electronic Timer according to instructions described in this catalog.
- Make sure that the operating conditions are as described in the specifications. If you are uncertain about the specifications, contact IDEC in advance.
- In these directions, safety precautions are categorized in order of importance to Warning and Caution.

Warning

Warning notices are used to emphasize that improper operation may cause sever personal injury or death.

- Turn power off to the Electronic timer before starting installation, removal, Wiring, maintenance, and inspection on the Electronic Timer.
- Failure to turn power off may cause electrical shocks or fire hazard.
- Emergency stop and interlocking circuits must be configured outside the Electronic timer. If such a circuit is configured inside the Electronic Timer, failure of the Electronic timer may cause malfunction of the control system, or an accident.

Caution

Caution notices are used where inattention might cause personal injury or damage to equipment.

- The Electronic Timer is designed for installation in equipment. Do not install the Electronic Timer outside equipment.
- Install the Electronic Timer in environments described in the specifications. If
 the Electronic Timer is used in places where it will be subjected to high-temperature, high-humidity, condensation, corrosive gases, excessive vibrations,
 or excessive shocks, then electrical shocks, fire hazard, or malfunction could
 result.
- Use an IEC60127-approved fuse and circuit breaker on the power and output line outside the Electronic Timer.
- Do not disassemble, repair, or modify the Electronic Timer.
- When disposing of the Electronic Timer, do so as industrial waste.

Installation of Hold-Down Springs

Panel Mounting Accessories

Panel Mount Sockets and Hold-Down Springs

Panel Mount Socket				Applicable HD Springs	
Style	Appearance	Use with Timers	Part No.	Appearance	Part No.
8-Pin Solder Terminal	1759	GT3A- (8-pin) GT3W- (8-pin) GT3F- (8-pin)	SR2P-51	1-1	SFA-402
11-Pin Solder Terminal	AT IS ST	GT3A- (11-pin) GT3W- (11-pin) GT3F- (11-pin)	SR3P-51	0	

For information on installing the hold-down springs, see page 860.

Flush Panel Mount Adapter and Sockets that use an Adapter

Accessory	Description	Appearance	Use with Timers	Part No.
Panel Mount Adapter	Adaptor for flush panel mounting GT3 timers		All GT3 timers	RTB-G01
Sockets for use with Panel Mount Adapter	8-pin screw terminal	Je o o o	All 8-pin timers	SR6P-M08G
	11-pin screw terminal	(Shown: SR6P-M08G for Wiring Socket Adapter)	All 11-pin timers	SR6P-M11G
	8-pin solder terminal		All 8-pin timers	SR6P-S08
	11-pin solder terminal		All 11-pin timers	SR6P-S11

1

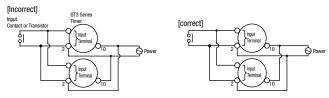

No hold down springs are available for flush panel mounting.

Instructions: Wiring Inputs for GT3 Series

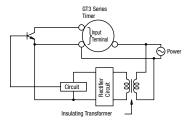

Inputs

To avoid electric shock, do not touch the input signal terminal during power voltage application.

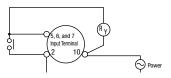

When connecting the input signal terminals of two or more GT3A timers to the same contact or transistor, the input terminals of the same number should be connected. (Connect Terminals No.2 in common.)

In a transistor circuit for controlling input signals, with its primary and secondary power circuits isolated, do not ground the secondary circuit.

Connect the input signal terminals of the GT3A timers to Terminal No.2 only. Never apply voltage to other terminals; otherwise, the internal circuit may be damaged.

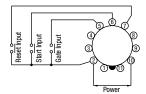

Input signal lines must be made as short as possible and installed away from power cables and power lines. Use shielded wires or a separate conduit for input wiring.

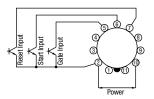

Inputs Instructions, continued

For contact input, use gold-plated contacts to make sure that the residual voltage is less than 1V when the contacts are closed.

For transistor input, use transistors with the following specifications; VCE = 40V, VCES = 1V or less, IC = 50 mA or more, and ICBO = 50μ A or less. The resistance should be less than $1k\Omega$ when the transistor is on. When the output transistor switches on, a signal is input to the timer.

Inputs: GT3A-1, -2, -3

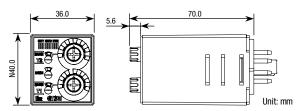

Transistor output equipment such as proximity switches and photoelectric switches can input signals if they are voltage/current output type, with power voltage ranges from 18 to 30V and have1V. When the signal voltage switches from H to L, a signal is input to the timer

Inputs: GT3A-4, -5, -6

Start Input	The start input initiates a time-delay operation and controls output status.	No-voltage contact inputs and NPN open collector transistor inputs are applicable.	
Reset Input	When the reset input is activated, the time is reset, and contacts return to original state.	24V DC, 1mA maximum	
Gate Input	The time-delay operation is suspended while the gate input is on (pause).	Input response time: 50msec maximum	

Dimensions

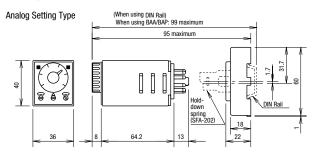

NOTE: GT3W series are UL Listed when used in combination

with following IDEC's sockets:

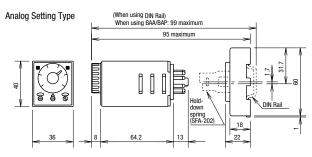

SR2P-06* pin type socket. SR3P-05* pin type socket. (*-May be followed by A,B,C or U) GT3W-A11, A33: GT3W-A11E:

- The socket to be used with these timers are rated:
 -Conductor Temperature Rating 60°C min.
 -Use 14AWG max.(2mm²max.) Copper conductors only
- -Terminal Torque 1.0 to 1.3 N-m

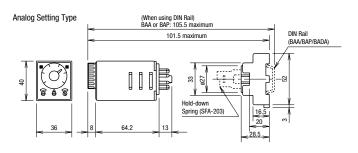

Analog GT3 Timer, 8-Pin with SR2P-06

Analog GT3 Timer, 11-Pin with SR3P-06

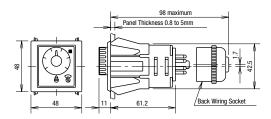

Analog GT3 Timer, 11-Pin with SR3P-05

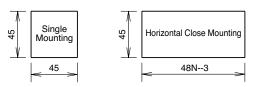

Panel Mount Adapter

Analog GT3 Timer, 8-Pin and 11-Pin with SR6P-S08 or SR6P-S11

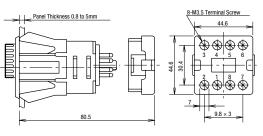

Mounting Hole Layout

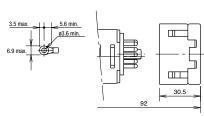

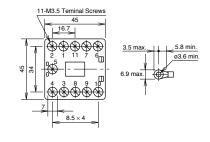

Tolerance: +0.5 to 0 N: No. of timers mounted

GT3 Timer, 8-Pin with SR6P-M08G

GT3 Timer, 11-Pin with SR6P-M11G

General Instructions for All Timer Series

Load Current

With inductive, capacitive, and incandescent lamp loads, inrush current more than 10 times the rated current may cause welded contacts and other undesired effects. The inrush current and steady-state current must be taken into consideration when specifying a timer.

Contact Protection

Switching an inductive load generates a counter-electromotive force (back EMF) in the coil. The back EMF will cause arcing, which may shorten the contact life and cause imperfect contact. Application of a protection circuit is recommended to safeguard the contacts.

Temperature and Humidity

Use the timer within the operating temperature and operating humidity ranges and prevent freezing or condensation. After the timer has been stored below its operating temperature, leave the timer at room temperature for a sufficient period of time to allow it to return to operating temperatures before use.

Environment

Avoid contact between the timer and sulfurous or ammonia gases, organic solvents (alcohol, benzine, thinner, etc.), strong alkaline substances, or strong acids. Do not use the timer in an environment where such substances are prevalent. Do not allow water to run or splash on the timer.

Vibration and Shock

Excessive vibration or shocks can cause the output contacts to bounce, the timer should be used only within the operating extremes for vibration and shock resistance. In applications with significant vibration or shock, use of hold down springs or clips is recommended to secure a timer to its socket.

Time Setting

The time range is calibrated at its maximum time scale; so it is desirable to use the timer at a setting as close to its maximum time scale as possible. For a more accurate time delay, adjust the control knob by measuring the operating time with a watch before application.

Input Contacts

Use mechanical contact switch or relay to supply power to the timer. When driving the timer with a solid-state output device (such as a two-wire proximity switch, photoelectric switch, or solid-state relay), malfunction may be caused by leakage current from the solid-state device. Since AC types comprise a capacitive load, the SSR dielectric strength should be two or more times the power voltage when switching the timer power using an SSR.

Generally, it is desirable to use mechanical contacts whenever possible to apply power to a timer or its signal inputs. When using solid state devices, be cautious of inrushes and back-EMF that may exceed the ratings on such devices. Some timers are specially designed so that signal inputs switch at a lower voltage than is used to power the timer (models designated as "B" type).

Timing Accuracy Formulas

Timing accuracies are calculated from the following formulas:

Repeat Error = ± 1 x Maximum Measured Value – Minimum Measured Value x 100%

2 Maximum Scale Value

Voltage Error $= \pm \frac{\text{Tv} - \text{Tr x } 100\%}{\text{T}}$

Tr

Tv: Average of measured values at voltage V Tr: Average of measured values at the rated voltage

Temperature Error $= \pm \frac{\text{Tt} - \text{T20} \times 100\%}{\text{T20}}$

Tt: Average of measured values at °C T20: Average of measured values at 20°C

Setting Error = ± Average of Measured Values - Set Value x 100% Maximum Scale Value
