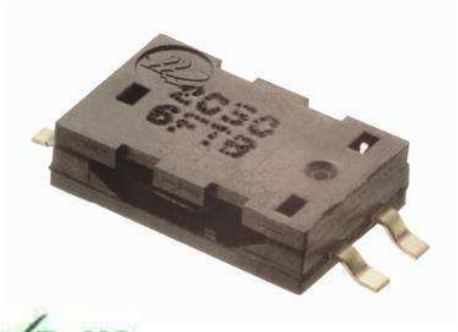
HTS2030SMD – Temperature and Relative Humidity Sensor



- **Miniature Surface mount SMD package**
- **Lead free component**
- **Patented solid polymer structure**
- **Suitable for linear voltage or frequency output circuitry**
- **Fast response time and very low temperature coefficient**

DESCRIPTION

Based on a unique **capacitive cell for humidity** measurement and a **Negative Temperature Coefficient (NTC)** thermistor for temperature measurement, this dual-purpose relative humidity / temperature miniaturized sensor is designed for high volume, **cost sensitive applications with tight space constraints**. It is useful in all applications where **dew point, absolute humidity measurements** or humidity compensation are required.

FEATURES

- Fulll interchangeability with no calibration required in standard conditions
- Instantaneous desaturation after long periods in saturation phase
- Compatible with automatized assembly processes, including Pb free wave soldering and reflow processes (1)
- Individual marking for compliance to stringent traceability requirements
- Part may be washed with distilled water

APPLICATIONS

- Automotive
- Home Appliance
- Printers
- Meteorology

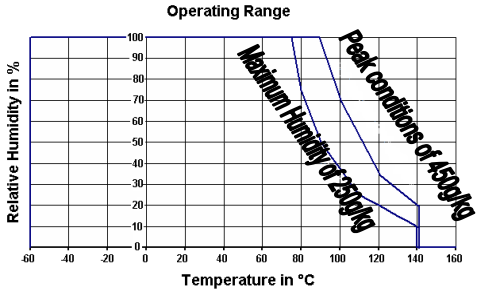
(1) Soldering temperature profiles available on request / contact us at humidity.application@meas-spec.com

PERFORMANCE SPECS

MAXIMUM RATINGS

Ratings	Symbol	Value	Unit
Operating Temperature	Ta	-60 to 140	℃
Storage Temperature	Tstg	-60 to 140	℃
Supply Voltage (Peak)	Vs	10	Vac
Humidity Operating Range	RH	0 to 100	% RH

Peak conditions: less than 10% of the operating time.



ELECTRICAL CHARACTERISTICS

(Ta=25℃, measurement frequency @10kHz unless othe rwise noted)

Humidity Characteristics	Symbol	Min	Typ	Max	Unit
Humidity Measuring Range	RH	1		99	%RH
Supply Voltage	Vs			10	V
Nominal Capacitance @55%RH (1)	C	177	180	183	pF
Temperature coefficient	T_{cc}			0.01	pF/℃
Average Sensitivity from 33% to 75%RH	ΔC/%RH		0.31		pF/%RH
Leakage Current (Vcc=5V)	I			1	nA
Recovery time after 150 hours of condensation	tr		10		s
Humidity Hysteresis				+/-1	%RH
Long Term Stability	T		+/-0.5		%RH/yr
Time Constant (at 63% of signal, still air) 33%RH to 80%RH	τ		3	5	s
Deviation to typical response curve (10% RH to 90%RH)			+/-2		%RH

(1) Tighter specification available on request

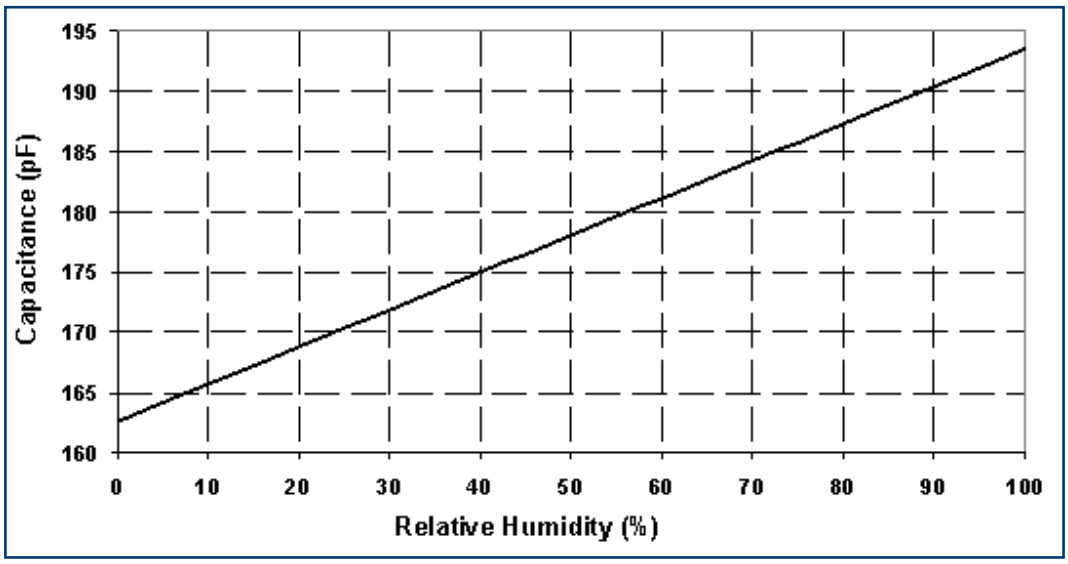
Temperature Characteristics	Symbol	Min	Typ	Max	Unit
Nominal Resistance @25℃	R		10		kΩ
Beta value: B25/100	β	3600	3730	3800	
Temperature Measuring Range	Ta	-60		140	℃
Nominal Resistance Tolerance @25℃	R_N		2	3	%
Beta Value Tolerance	β		3		%
Response Time	τ		10		s

TYPICAL PERFORMANCE CURVES

HUMIDITY SENSOR

- **Polynomial Response**

C (pF)=C@55 %*(3.903 10^{-8} *RH^3-8.294 10^{-6} *RH^2+2.188 10^{-3} *RH+0.898)



- **Typical Response Look-Up Table (polynomial reference curve) @10kHz/1V**

RH (%)	0	5	10	15	20	25	30	35	40	45	50
Cp (pF)	161.6	163.6	165.4	167.2	169.0	170.7	172.3	173.9	175.5	177.0	178.5
RH (%)	55	60	65	70	75	80	85	90	95	100	
Cp (pF)	180	181.4	182.9	184.3	185.7	187.2	188.6	190.1	191.6	193.1	

- **Reverse Polynomial Response**

RH (%) = $-3.4656\ 10^{+3}*X^3+1.0732\ 10^{+4}*X^2-1.0457\ 10^{+4}*X+3.2459\ 10^{+3}$
With X = C(read) / C@55%RH

TEMPERATURE SENSOR

- **Typical Temperature Output**

Depending on the needed temperature measurement range and associated accuracy, we suggest two methods to access to the NTC resistance values.

$$R_T = R_N \times e^{\beta\left(\frac{1}{T}-\frac{1}{T_N}\right)}$$

R_T	NTC resistance in Ω at temperature T in K
R_N	NTC resistance in Ω at rated temperature T in K
T, T_N	Temperature in K
β	Beta value, material specific constant of NTC
e	Base of natural logarithm (e=2.71828)

① The exponential relation only roughly describes the actual characteristic of an NTC thermistor can, however, as the material parameter β in reality also depend on temperature. So this approach is suitable for describing a restricted range around the rated temperature or resistance with sufficient accuracy.

② For practical applications, a more precise description of the real R/T curve may be required. Either more complicated approaches (e.g. the Steinhart-Hart equation) are used or the resistance/temperature relation as given in tabulation form. The below table has been experimentally determined with utmost accuracy for temperature increments of 1 degree.

Actual values may also be influenced by inherent self-heating properties of NTCs. Please refer to MEAS-France/Humirel Application Note HPC106 “Low power NTC measurement”.

- **Steinhart-Hart coefficients**

According to the equation below, the Steinhart-Hart coefficients for the operating temperature range for HTS2030SMD thermistor are:

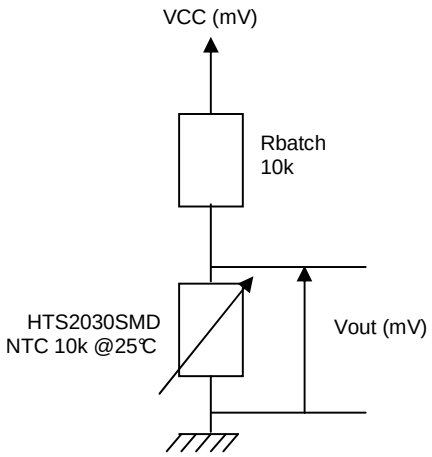
$$\frac{1}{T} = a + b * \ln(R) + C * \ln(R) * \ln(R) * \ln(R)$$

R	NTC resistance in Ω at temperature T in K
T	Temperature in K
a	Constant value (a= 9.94805E-04)
b	Constant value (b= 2.46791E-04)
c	Constant value (c= 1.10298E-07)

- **Temperature Interface circuit**

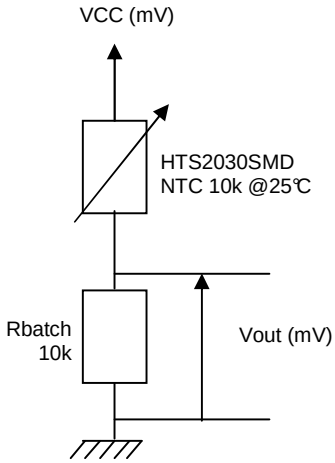
Concerning the temperature sensor of the HTS2030SMD, the following measuring method described below is based on a voltage bridge divider circuit. It uses only one resistor component (Rbatch) at 1% to design HTS2230 temperature sensor interfacing circuit. Rbatch is chosen to be equal to NTC @25℃ to get: Vout = Vcc/2 @25℃. There are two proposal configurations: If Rbatch is connected to Vcc and NTC to Ground, it leads to a negative slope characteristic (Pull-Down Configuration). For a positive slope, Rbatch and NTC resistors have to be switched (Pull-Up Configuration).

Pull-Up Configuration



$$V_{OUT}(mV) = \frac{Vcc(mV) * NTC_{HTS2030SMD}(\Omega)}{R_{batch}(\Omega) + NTC_{HTS2030SMD}(\Omega)}$$

Pull-Down Configuration



$$V_{OUT}(mV) = \frac{Vcc(mV) * R_{batch}(\Omega)}{R_{batch}(\Omega) + NTC_{HTS2030SMD}(\Omega)}$$

- **Temperature conversion: look-up table (Vcc=5Vdc)**

QUALIFICATION PROCESS

HTS2030SMD sensors have been qualified through a complete qualification process taking in account many of the requirements of the JEDEC standard including:

- Solder heat and solderability including lead free process
- Pb free wave soldering and reflow soldering process(260℃) + DI water clean at 45℃
- Mechanical shock JESD-22-B104-A
- Vibration - Variable frequency (20 to 2000Hz) JESD-22-B103-A
- Marking permanency
- ESD - Electrostatic Discharge – Air Gun +-15kV(IEC 1000)
- Salt Atmosphere JESD22-A107-A
- Temperature Cycling - 40℃ / +125℃
- High Temperature / Humidity Operating Life - 93%RH / 60℃ for 1000 hours
- Low Humidity storage life - RH < 10%/23℃ for 1000 hours
- Resistance to immersion in water at ambient temperature and 80℃
- High temperature storage 140℃ for 168 hours
- Resistance to many chemicals linked to home appliances/automotive or consumer applications

ENVIRONMENTAL AND RECYCLING

HTS2030SMD sensors are lead free components and are compatible with Pb Free soldering processes.
HTS2030SMD sensors are free from Cr (6+), Cd and Hg.

SOLDERING INSTRUCTIONS

We recommend taking specific attention to soldering conditions to get the best performance of MEAS-France/Humirel sensors. See Application Note. To get it, please contact: humirel.application@meas-spec.com
