FEATURES:

- RoHS Compliant
- Universal 85-264 VAC Input
- High Efficiency

- 2 Year Warranty
- Fits 1U Applications
- EN 60950-1 ITE Certification
- EN 60601-1 Medical Certification
- Class B Emissions per EN 55011/22
- Advanced SMT Design
 Compact 4.2" x 7.0" x 1.5" Size
 Harmonic Current per EN 61000-3-2
 EMC to EN 61000-6-2 & EN 60601-1-2
 - Optional Chassis and Cover
 - . One to Four Outputs

OPEN FRAME

Consult factory for alternate output configurations.

Consult factory for positive, negative or floating outputs.

Refer to Applications Information for complete output power ratings.

All specifications are maximum at 25° C, 150W unless otherwise stated, may vary by model and are subject to change without notice.

Specify optional chassis and cover or remote on/off when ordering.

APPLICATIONS INFORMATION

- Rated 12A maximum with convection cooling
- 2. Rated 20A maximum with convection cooling.
- 3. Total power must not exceed 100 watts with convection cooling or 150 watts with 300 LFM forced air cooling on open frame models except where noted.
- 4. Total power must not exceed 85 watts with convection cooling or 150 watts with 300 LFM forced air cooling and chassis/cover option.
- 5. Total current from Outputs 3 & 4 must not exceed 3 amps with convection cooling.
- 6. Total current from Outputs 1 & 2 must not exceed 15 amps with convection cooling.
- 7. Semiconductor case temperatures must not exceed 110°C.
- 8. Each output can deliver its rated current but total output power must not exceed maximum power as determined by the cooling method stated above.
- 9. Sufficient area must be provided around convection cooled power supplies to allow natural movement of air to develop.
- 10. 300 linear feet per minute of airflow must be maintained one inch above any point of the heatsink in the direction shown when forced air cooling is required.
- 11. This product is intended for use as a professionally installed component within information technology and medical equipment.
- A minimum load of 10% is required on output one to ensure proper regulation of remaining outputs.
- 13. Remote sense terminals may be used to compensate for cable losses up to 250mV. The use of a twisted pair is recommended as well as a decoupling capacitor (0.1 - $10\mu F$) and a capacitor of $100\mu F/\text{amp}$ connected across the load side.
- Peak to peak output ripple and noise is measured directly at the output terminals of the power supply, without the use of the probe ground lead or retractable tip, 20 MHz
- This product was type tested and safety certified using the dielectric strength test voltages listed in Table 6 of IEC 60601-1:2005. In consideration of Clause 8.8.3, care must be taken to insure that the voltage applied to a reinforced insulation does not overstress different types and levels of insulation. Primary and secondary to ground capacitors may need to be disconnected prior to performing a dielectric strength test on the power supply or the end product. It is highly recommended that the DC test voltages listed in DVB.1, Annex DVB of UL 60601-1 1st Edition are not exceeded during a production-line dielectric strength test of the assembled end product. Please consult factory for further information.
- This power supply has been safety approved and final tested using a DC dielectric 16. strength test. Please consult factory before performing an AC dielectric strength test.
- Maximum screw penetration into bottom chassis mounting holes is .100 inches.
- Maximum screw penetration into side chassis mounting holes is .250 inches. 18.
- To meet emissions specifications, all four mounting hole pads must be electrically 19. connected to a common metal chassis. Chassis/cover option recommended
- This product includes only one fuse in the input circuit. In consideration of Clause 8.11.5 of IEC 60601-1:2005, a second fuse may be required in the end product.
