

54F251A, 74F251A

8-Input Multiplexer with TRI-STATE Outputs

The 'F251A is a high-speed 8-input digital multiplexer. It provides, in one package, the ability to select one bit of data from up to eight sources. It can be used as a universal function generator to generate any logic function of four variables. Both assertion and negation outputs are provided.

Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All recreations are done with the approval of the OCM.

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceeds the OCM data sheet.

Quality Overview

- ISO-9001
- AS9120 certification
- Qualified Manufacturers List (QML) MIL-PRF-38535
 - Class Q Military
 - Class V Space Level
- Qualified Suppliers List of Distributors (QSLD)
 - Rochester is a critical supplier to DLA and meets all industry and DLA standards.

Rochester Electronics, LLC is committed to supplying products that satisfy customer expectations for quality and are equal to those originally supplied by industry manufacturers.

The original manufacturer's datasheet accompanying this document reflects the performance and specifications of the Rochester manufactured version of this device. Rochester Electronics guarantees the performance of its semiconductor products to the original OEM specifications. 'Typical' values are for reference purposes only. Certain minimum or maximum ratings may be based on product characterization, design, simulation, or sample testing.

National Semiconductor

54F/74F251A 8-Input Multiplexer with TRI-STATE® Outputs

General Description

The 'F251A is a high-speed 8-input digital multiplexer. It provides, in one package, the ability to select one bit of data from up to eight sources. It can be used as a universal function generator to generate any logic function of four variables. Both assertion and negation outputs are provided.

Features

- Multifunctional capability
- On-chip select logic decoding
- Inverting and non-inverting TRI-STATE outputs

Commercial	Military	Package Number	Package Description
74F251APC		N16E	16-Lead (0.300" Wide) Molded Dual-In-Line
	54F251ADM (Note 2)	J16A	16-Lead Ceramic Dual-In-Line
74F251ASC (Note 1)		M16A	16-Lead (0.150" Wide) Molded Small Outline, JEDEC
74F251ASJ (Note 1)		M16D	16-Lead (0.300" Wide) Molded Small Outline, EIAJ
	54F251AFM (Note 2)	W16A	16-Lead Cerpack
	54F251ALL (Note 2)	E20A	20-Lead Ceramic Leadless Chip Carrier, Type C

Note 1: Devices also available in 13" reel. Use suffix = SCX and SJX.

Note 2: Military grade device with environmental and burn-in processing. Use suffix = DMQB, FMQB and LMQB.

		54F/74F		
Pin Names	Description	U.L. HIGH/LOW	Input I _{IH} /I _{IL} Output I _{OH} /I _{OL}	
S0-S2	Select Inputs	1.0/1.0	20 µA/−0.6 mA	
OE	TRI-STATE Output Enable Input (Active LOW)	1.0/1.0	20 µA/-0.6 mA	
I0-17	Multiplexer Inputs	1.0/1.0	20 µA/-0.6 mA	
z	TRI-STATE Multiplexer Output	150/40 (33.3)	-3 mA/24 mA (20 mA)	
Z	Complementary TRI-STATE Multiplexer Output	150/40 (33.3)	-3 mA/24 mA (20 mA)	

Functional Description

This device is a logical implementation of a single-pole, 8position switch with the switch position controlled by the state of three Select inputs, S_0 , S_1 , S_2 . Both assertion and negation outputs are provided. The Output Enable input (\overline{OE}) is active LOW. When it is activated, the logic function provided at the output is:

$$\begin{split} \mathsf{Z} &= \overline{\mathsf{OE}} \bullet (\mathsf{I}_0 \bullet \overline{\mathsf{S}}_0 \bullet \overline{\mathsf{S}}_1 \bullet \overline{\mathsf{S}}_2 + \mathsf{I}_1 \bullet \mathsf{S}_0 \bullet \overline{\mathsf{S}}_1 \bullet \overline{\mathsf{S}}_2 + \\ & \mathsf{I}_2 \bullet \overline{\mathsf{S}}_0 \bullet \mathsf{S}_1 \bullet \overline{\mathsf{S}}_2 + \mathsf{I}_3 \bullet \mathsf{S}_0 \bullet \overline{\mathsf{S}}_1 \bullet \overline{\mathsf{S}}_2 + \\ & \mathsf{I}_4 \bullet \overline{\mathsf{S}}_0 \bullet \overline{\mathsf{S}}_1 \bullet \overline{\mathsf{S}}_2 + \mathsf{I}_5 \bullet \mathsf{S}_0 \bullet \overline{\mathsf{S}}_1 \bullet \overline{\mathsf{S}}_2 + \\ & \mathsf{I}_6 \bullet \overline{\mathsf{S}}_0 \bullet \mathsf{S}_1 \bullet \mathsf{S}_2 + \mathsf{I}_7 \bullet \mathsf{S}_0 \bullet \mathsf{S}_1 \bullet \mathsf{S}_2) \end{split}$$

When the Output Enable is HIGH, both outputs are in the high impedance (High Z) state. This feature allows multiplexer expansion by tying the outputs of up to 128 devices together. When the outputs of the TRI-STATE devices are tied together, all but one device must be in the high impedance state to avoid high currents that would exceed the maximum ratings. The Output Enable signals should be designed to ensure there is no overlap in the active LOW portion of the enable voltages.

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Storage Temperature	-65°C to +150°C
Ambient Temperature under Bias	-55°C to +125°C
Junction Temperature under Bias Plastic	-55°C to +175°C -55°C to +150°C
V _{CC} Pin Potential to Ground Pin	-0.5V to +7.0V
Input Voltage (Note 2)	-0.5V to +7.0V
Input Current (Note 2)	-30 mA to +5.0 mA
Voltage Applied to Output in HIGH State (with $V_{CC} = 0V$)	
Standard Output	-0.5V to V _{CC}
TRI-STATE Output	-0.5V to +5.5V

DC Electrical Characteristics

Current Applied to Output in LOW State (Max)

twice the rated IOL (mA)

Note 1: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 2: Either voltage limit or current limit is sufficient to protect inputs.

Recommended Operating Conditions

Free Air Ambient Temperature

Military	-55°C to +125°C
Commercial	0°C to + 70°C
Supply Voltage	
Military	+4.5V to +5.5V
Commercial	+4.5V to +5.5V
