Dual JK Flip-Flop

The ‘H78 is a dual JK master/slave flip-flop with separate Direct Set inputs, a common Direct Clear input and a common Clock Pulse input. Inputs to the master section are controlled by the clock pulse. The clock pulse also regulates the circuitry which connects the master and slave sections. The sequence of operation is as follows: 1) isolate slave from master; 2) enter information from J and K inputs to master; 3) disable J and K inputs; 4) transfer information from master to slave. The logic state of the J and K inputs must not be allowed to change when the clock pulse is in a HIGH state.

Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All recreations are done with the approval of the OCM.

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceeds the OCM data sheet.

Quality Overview

- ISO-9001
- AS9120 certification
- Qualified Manufacturers List (QML) MIL-PRF-38535
    - Class Q Military
    - Class V Space Level
- Qualified Suppliers List of Distributors (QSLD)
    - Rochester is a critical supplier to DLA and meets all industry and DLA standards.

Rochester Electronics, LLC is committed to supplying products that satisfy customer expectations for quality and are equal to those originally supplied by industry manufacturers.

The original manufacturer’s datasheet accompanying this document reflects the performance and specifications of the Rochester manufactured version of this device. Rochester Electronics guarantees the performance of its semiconductor products to the original OEM specifications. ‘Typical’ values are for reference purposes only. Certain minimum or maximum ratings may be based on product characterization, design, simulation, or sample testing.

DUAL JK FLIP-FLOP

(With Common Clear and Clock and Separate Set Inputs)

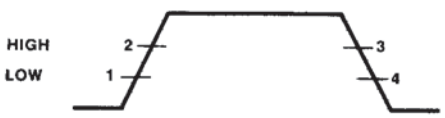
DESCRIPTION — The 'H78 is a dual JK master/slave flip-flop with separate Direct Set inputs, a common Direct Clear input and a common Clock Pulse input. Inputs to the master section are controlled by the clock pulse. The clock pulse also regulates the circuitry which connects the master and slave sections. The sequence of operation is as follows: 1) isolate slave from mas-2ter; 2) enter information from J and K inputs to master; 3) disable J and K inputs; 4) transfer information from master to slave. The logic state of the J and K inputs must not be allowed to change when the clock pulse is in a HIGH state.

TRUTH TABLE

INPUTS		OUTPUT
@ t_n		@ t_{n+1}
J	K	Q
L	L	Q_n
L	H	L
H	L	H
H	H	$\overline{Q}_n$

H = HIGH Voltage Level
L = LOW Voltage Level
t_n = Bit time before clock pulse.
t_{n+1} = Bit time after clock pulse.

CLOCK WAVEFORM



Asynchronous Inputs:
LOW input to $\overline{S}_D$ sets Q to HIGH level
LOW input to $\overline{C}_D$ sets Q to LOW level
Clear and Set are independent of clock
Simultaneous LOW on $\overline{C}_D$ and $\overline{S}_D$ is makes both Q and $\overline{Q}$ HIGH

The 'LS78 is a dual JK, negative edge-triggered flip-flop which also offers separate Direct Set inputs, a common Direct Clear and common Clock Pulse input. When the Clock Pulse input is HIGH, the JK inputs are enabled and data is accepted. This data will be transferred to the outputs according to the Truth Table on the HIGH-to-LOW clock transitions.

ORDERING CODE: See Section 9

PKGS	PIN OUT	COMMERCIAL GRADE: V_{CC} = +5.0 V ±5%, T_A = 0°C to +70°C	MILITARY GRADE: V_{CC} = +5.0 V ±10%, T_A = -55°C to +125°C	PKG TYPE
