

AM25LS2521

Eight-Bit Equal-to Comparator

The AM25LS2521 is an 8-bit “equal to” comparator comparable of comparing two 8-bit words for “equal to” with provision for expansion or external enabling. The matching of the two 8-bit inputs plus a logic LOW on the \bar{E}_{IN} produces an active LOW on the output \bar{E}_{OUT} .

Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All recreations are done with the approval of the OCM.

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceeds the OCM data sheet.

GENERAL DESCRIPTION

The Am25LS2521 is an 8-bit "equal to" comparator capable of comparing two 8-bit words for "equal to" with provision for expansion or external enabling. The matching of the two 8-bit inputs plus a logic LOW on the \bar{E}_{IN} produces an active LOW on the output \bar{E}_{OUT} .

The logic expression for the device can be expressed as:
 $\bar{E}_{OUT} = (\bar{A}_0 \odot \bar{B}_0) (A_1 \odot B_1) (A_2 \odot B_2) (A_3 \odot B_3) (A_4 \odot B_4)$

$(\bar{A}_5 \odot \bar{B}_5) (A_6 \odot B_6) (A_7 \odot B_7) \bar{E}_{IN}$. It is obvious that the expression is valid where $A_0 - A_7$ and $B_0 - B_7$ are expressed as either assertions or negations. This is also true for pair of terms i.e. A_0 can be compared with B_0 at the same time \bar{A}_1 is compared with \bar{B}_1 . It is only essential that the polarity of the paired terms be maintained.
