Description

Incremental rotary encoders of the series 14 have been specially developed for use in areas with a high level of mechanical demand.

The shaft is specially equipped with a feather key groove for receiving a belt pulley wheel. The permissible radial force is 80 N and the permissible axial force is 60 N.

One special feature is the mechanical versatility of the flange. The incremental rotary encoder has a centering collar with a diameter of 40 mm and one with a diameter of 80 mm. Three M6 holes are available for fastening.

The pulse disk is designed in plastic for up to 1500 pulses. Beyond that, glass is used.
