

inspired LED **Universal TV Backlight Kit**

with USB Connector

The frequent and sometimes dramatic variation in picture brightness from your television screen can cause visual fatigue in an otherwise dark room. The new **Universal TV Backlight Kit** from Inspired LED provides adequate bias light to reduce eyestrain, making your television display seem crisper and the colors appear more vivid. Best of all, the **USB Connector** allows you to turn the lights on and off in sync with your television!

Small USB TV Backlight Kit: for TVs up to 42"	Medium USB TV Backlight Kit: for TVs up to 60"	Large USB TV Backlight Kit: for TVs up to 85"
(1) 123" Strip Normal Bright Cool White LEDs (6000K) (1) 1 Amp Power Supply (12VDC) (1) USB Switch & Connector (1) 2 foot cable (1) 4-pack cable clamps	(1) 162.5" Strip Normal Bright Cool White LEDs (6000K) (1) 2 Amp Power Supply (12VDC) (1) USB Switch & Connector (1) 2 foot cable (1) 4-pack cable clamps	(1) 231.5" Strip Normal Bright Cool White LEDs (6000K) (1) 3.8 Amp Power Supply (12VDC) (1) USB Switch & Connector (1) 2 foot cable (1) 4-pack cable clamps

Instructions:

- Beginning near TV power button, line up LED strip along back side of television, using small pieces of tape to secure in place during installation (*Note: do not cover any ventilation holes as this could hinder the performance of your TV*)
- Fold LED strips around corners as shown, taking care not to bend LEDs, resistors, or silver solder links
- At end of strip, cut along copper pads (located every 3 LEDs) to remove excess length
- Plug cable from end of LEDs into USB switch, using cable clamps to hold back excess length.
**If upgrading to dimmer: plug LED cable directly into dimmer side marked LED, then connect 4" cable from dimmer side marked PWR to USB switch*
- Run USB connector from USB switch to TV USB input and secure in place
- Plug in power supply and test connections, then remove adhesive backing from LED strip and secure in place
