

LMV321L, LMV358L, LMV324L

Low-power, general-purpose operational amplifier

Datasheet – production data

Features

- Low power consumption: 250 μ A max at 5 V
- Low offset voltage: 7 mV max at 25 °C
- Industrial temperature range: -40 °C to +125 °C
- Low supply voltage: 2.7 V - 5.5 V
- Gain bandwidth product: 1.3 MHz
- Tiny packages

Applications

- Battery-powered applications
- Portable devices
- Signal conditioning
- Active filtering
- Medical instrumentation

Description

The LMV321L, LMV358L and LMV324L are single, dual and quad operational amplifiers with rail-to-rail output capabilities. They are specifically designed to operate at low voltages (2.7 to 5 V) with enhanced performances compared to the industry standard LM3xx series.

The LMV321L, LMV358L and LMV324L are offered in tiny packages, allowing the devices to be used in small portable electronic applications and be placed closer to the actual signal.

The LMV321L, LMV358L and LMV324L are complete cost-effective solutions for designs where cost is of primary importance.

- All voltage values, except differential voltage, are with respect to network ground terminal.
- Differential voltages are the non-inverting input terminal with respect to the inverting input terminal.
- $V_{CC-} - V_{in}$ must not exceed 6 V, V_{in} must not exceed 6 V.
- Input current must be limited by a resistor in series with the inputs.
- Short-circuits can cause excessive heating and destructive dissipation.
- R_{th} are typical values.
- Human body model: 100 pF discharged through a 1.5 k Ω resistor between two pins of the device, done for all couples of pin combinations with other pins floating.
- Machine model: a 200 pF cap is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω), done for all couples of pin combinations with other pins floating.
- Charged device model: all pins plus package are charged together to the specified voltage and then discharged directly to the ground.

4 Application information

4.1 Operating voltages

The LMV321L, LMV358L and LMV324L can operate from 2.7 to 5.5 V. The devices' parameters are fully specified for 2.7 and 5 V power supplies. Additionally, the main specifications are guaranteed in extended temperature ranges from -40° C to +125° C.

4.2 Input common-mode range

The LMV321L, LMV358L and LMV324L have an input common-mode range that includes ground. The input common-mode range is extended from $V_{CC-} - 0.2$ V to $V_{CC+} - 1$ V, with no output phase reversal.

4.3 Rail-to-rail output

The operational amplifiers' output levels can go close to the rails: 180 mV maximum above and below the rail when connected to a 10 k Ω resistive load to $V_{CC}/2$.

4.4 Input offset voltage drift over temperature

The maximum input voltage drift over the temperature variation is defined as follows.

$$\frac{\Delta V_{io}}{\Delta T} = \max \left| \frac{V_{io}(T) - V_{io}(25^\circ \text{C})}{T - 25^\circ \text{C}} \right|$$

for $T_{\min} < T < T_{\max}$.

4.5 PCB layouts

For correct operation, it is advised to add 10 nF decoupling capacitors as close as possible to the power supply pins.

4.6 Macromodel

Accurate macromodels of the LMV321L, LMV358L and LMV324L are available on STMicroelectronics' web site at www.st.com. This model is a trade-off between accuracy and complexity (that is, time simulation) of the LMV321L, LMV358L and LMV324L operational amplifiers. It emulates the nominal performances of a typical device within the specified operating conditions mentioned in the datasheet. It also helps to validate a design approach and to select the right operational amplifier, *but it does not replace on-board measurements*.

5 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK[®] packages, depending on their level of environmental compliance. ECOPACK[®] specifications, grade definitions and product status are available at: www.st.com. ECOPACK[®] is an ST trademark.
