Infrared Remote Control Receiver Module

IRM-36XXL Series

Features

- Photo detector and preamplifier in one package
- Internal filter for PCM frequency
- Improved inner shielding against electrical field disturbance
- TTL and CMOS compatibility
- Low power consumption
- Improved immunity against ambient light
- Suitable burst length ≥ 10 cycles/burst
- Pb free
- The product itself will remain within RoHS compliant version.
- Wide operating supply voltage 2.7V—5.5V (Min 2.3V operating)
- Output active low

Descriptions

The IRM-36XXL is miniaturized receivers for infrared remote control systems. PIN diode and preamplifier are assembled on lead frame, the epoxy package is designed as IR filter. The demodulated output signal can directly be decoded by a microprocessor. IRM-36XXL is the standard IR remote control receiver series, supporting all major transmission codes.

Applications

- Light detecting portion of remote control
- AV instruments such as Audio, TV, VCR, CD, MD, etc.
- Home appliances such as Air-conditioner, Fan, etc.
- The other equipments with wireless remote control.
- CATV set top boxes
- Multi-media Equipment

Test Method :

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

① Measurement place

A place that is nothing of extreme light reflected in the room.

② External light

Project the light of ordinary white fluorescent lamps which are not high Frequency lamps and must be less then 10 Lux at the module surface.

($E_e \leq 10\text{Lux}$)

③ Standard transmitter

A transmitter whose output is so adjusted as to $V_o=400\text{mVp-p}$ and the output Wave form shown in Fig.-1. According to the measurement method shown in Fig.-2 the standard transmitter is specified.

However , the infrared photodiode to be used for the transmitter should be $\lambda_p=940\text{nm}, \Delta\lambda=50\text{nm}$.

(Standard light / Light source temperature 2856°K).

④ Measuring system

According to the measuring system shown in Fig.-3

The Notice of Application:

Transmission of remote control signal consist of four parts: Encode Part, IR Transmitter Source, IRM device, Decode Part

1. When IRM-36XXL SERIES code select frequency, it need to well understand the center system of encode part.
2. Strong or weak light of IR Transmitter can affect distance of transmission.
3. When using IRM-36XXL SERIES device, it requires the composition of code pattern to reach the demand as follows:

Minimum t_{burst} (number of pulses per burst)	Minimum t_{burst_gap} (number of pulses between two burst)	Minimum t_{pause}
10pulses	14 pulses	20 msec

4. It needs to ensure the translation range of decode part if it is applied to the pulse-width range.

If the above items hardly assure of its application, it'll cause NG(no good) message from the edge of signal.
